RESOLUTION No. 23-79

A RESOLUTION OF THE MAYOR AND THE CITY COUNCIL OF THE CITY OF DORAL, FLORIDA, AUTHORIZING THE CITY MANAGER TO ADOPT THE PAVEMENT EVALUATION AND FIVE-YEAR MAINTENANCE AND REHABILITATION PLAN COMPLETED IN MARCH OF 2023; PROVIDING FOR IMPLEMENTATION; AND PROVIDING FOR AN EFFECTIVE DATE

WHEREAS, the City of Doral ("City") Public Works Department ("PWD") has been implementing a five-year capital improvement program ("CIP") for pavement maintenance and the rehabilitation of local roads under the jurisdiction of the City for the past years; and

WHEREAS, the most recent five-year CIP for roadway maintenance and rehabilitation was completed, and an update was required to conduct an evaluation of the pavement condition for the City's local roads; and

WHEREAS, the purpose of conducting a program update, is to provide PWD with information be able to confirm and extend the service life of the pavement, re-prioritize scheduled maintenance, and maximize use of available funds; and

WHEREAS, pursuant to the above need, the PWD requested a proposal from Marlin Engineering, Inc. for the provision of an update to the Pavement Management Program which includes a quantitative and qualitative evaluation of all roadway pavement under the jurisdiction of the City, and the development of a five-year roadway rehabilitation CIP; and

WHEREAS, at the May 2022 City Council Meeting, the Mayor and City Councilmembers adopted Resolution No. 22-78 approving the execution of Work Order

No. 7 for Marlin Engineering to perform the Pavement Evaluation and Five-Year Maintenance and Rehabilitation Plan Study ("Study"); and

WHEREAS, Marlin Engineering completed the attached Study which is presented to the City Council for adoption; and

WHEREAS, the proposed CIP included on the Study will allow the City to develop a 5 Year Capital Improvement Plan with an estimated expenditure of $5,480,556.74 for the five-year period; and

WHEREAS, the CIP does not require the City to allocate funding for any specific site, nor does it require the City to design and construct projects in the proposed order or magnitude; and

WHEREAS, the intent of the Study is to serve as a guide to the City in correlating the projects with an order and/or a cost magnitude; and

WHEREAS, the funds will be allocated, and the order of the projects will be determined, based on necessity and availability of funding; and

WHEREAS, PWD staff respectfully requests that the Mayor and City Councilmembers adopt the Pavement Evaluation and Five-Year Maintenance and Rehabilitation Plan Study and authorize City staff to proceed with the implementation of the recommendations presented by the Study; and

WHEREAS, funding for the design phase is available and will be budgeted in subsequent Fiscal Years in the Public Works Transportation Fund, "Construction in Progress" Account, Account No. 101.800005.500650, and funding for the construction

phase will be budgeted in Fiscal Year 2023-24 Transportation Fund, "Capital Outlay – Street Improvement" Account, Account No. 101.800005.500633.

NOW, THEREFORE, BE IT RESOLVED BY THE MAYOR AND THE CITY COUNCIL OF THE CITY OF DORAL AS FOLLOWS:

Section 1. Recitals. The above recitals are confirmed, adopted, and incorporated herein and made part hereof by this reference.

Section 2. Approval. The adoption of the Pavement Evaluation and Five-Year Maintenance and Rehabilitation Plan completed in March of 2023 by Marlin Engineering Inc, a copy which is attached hereto as Exhibit "A", is hereby approved.

Section 3. Implementation. The City Manager and the City Attorney are hereby authorized to take such further action as may be necessary to implement the purpose and provisions of this Resolution.

Section 4. Effective Date. This Resolution shall become effective immediately upon its adoption.

The foregoing Resolution was offered by Councilmember Puig-Corve who moved its adoption. The motion was seconded by Vice Mayor Pineyro and upon being put to a vote, the vote was as follows:

Mayor Christi Fraga	Yes
Vice Mayor Rafael Pineyro	Yes
Councilwoman Digna Cabral	Yes
Councilwoman Maureen Porras	Yes
Councilman Oscar Puig-Corve	Yes

PASSED AND ADOPTED this 10 day of April, 2023.

CHRISTI FRAGA, MAYOR

ATTEST:

CONNIE DIAZ, MMC
CITY CLERK

APPROVED AS TO FORM AND LEGAL SUFFICIENCY

1.0 Introduction

Marlin Engineering, Inc. was retained by the City of Doral to perform an evaluation of pavement conditions on all City-maintained roadways and to update the City of Doral's five-year pavement management program. This data was used to rate the pavement based on guidelines from the Florida Department of Transportation's (FDOT) *2022 Flexible Pavement Condition Survey (PCS) Handbook*. The PCS handbook provides guidance on the procedures for conducting a visual, mechanical and automated condition evaluation of flexible pavement systems. The data collected during the PCS will be used as input into the Pavement Management System (PMS) and can also be used for purposes of project prioritization.

The ultimate objective of this project is to serve as an update to the Pavement Evaluation & Five-Year Maintenance and Rehabilitation Report (March 2017). This will be completed by performing a survey of all City owned roads, determine roadway conditions using the FDOT rating method, and identify a future five-year pavement maintenance and rehabilitation (M&R) plan for the City of Doral. The PMS will assist the City of Doral in making decisions regarding M&R and help with the scheduling of M&R during the appropriate stages of pavement deterioration.

2.0 Methodology

As part of the previously completed pavement condition surveys, the City of Doral utilized the Pavement Condition Index (PCI) rating method and PAVER™ software to determine deterioration curves and future maintenance plans. In PCI method, a numerical value (between 0 and 100) is assigned to each segment which is calculated based on twenty (20) different types of pavement distress on a sample of the network.

As part of the current effort, the city has decided to utilize the FDOT pavement evaluation method which consists of visually estimating cracking within each roadway section and through use of an inertial profiler to collect rut and ride data at posted speeds. Ratings for cracking, rut and ride fall into a scale of 1 to 10, with 10 being the lowest level of distress. Due to the change in evaluation methods historical data is not compatible with current collected data; therefore, a prediction of pavement performance could not be done using a trend analysis. Pavement prioritization was developed based on the existing levels of distress of the pavement and the age of pavement at the time of survey.

2.1 Roadway Network Inventory

As a starting point, a Geographic Information System (GIS) base shapefile of Doral's road network was reviewed to identify all City (Doral), Private (Gated Developments), County (Miami-Dade County), and State (Florida) owned roads including street names, ownership, and section length. Also contained in the database was the classification for each roadway section used in the Section Ranking. The database was modified as required to match current field conditions. A map of all the current roads and ownership within the City of Doral is presented in **Figure 1**.

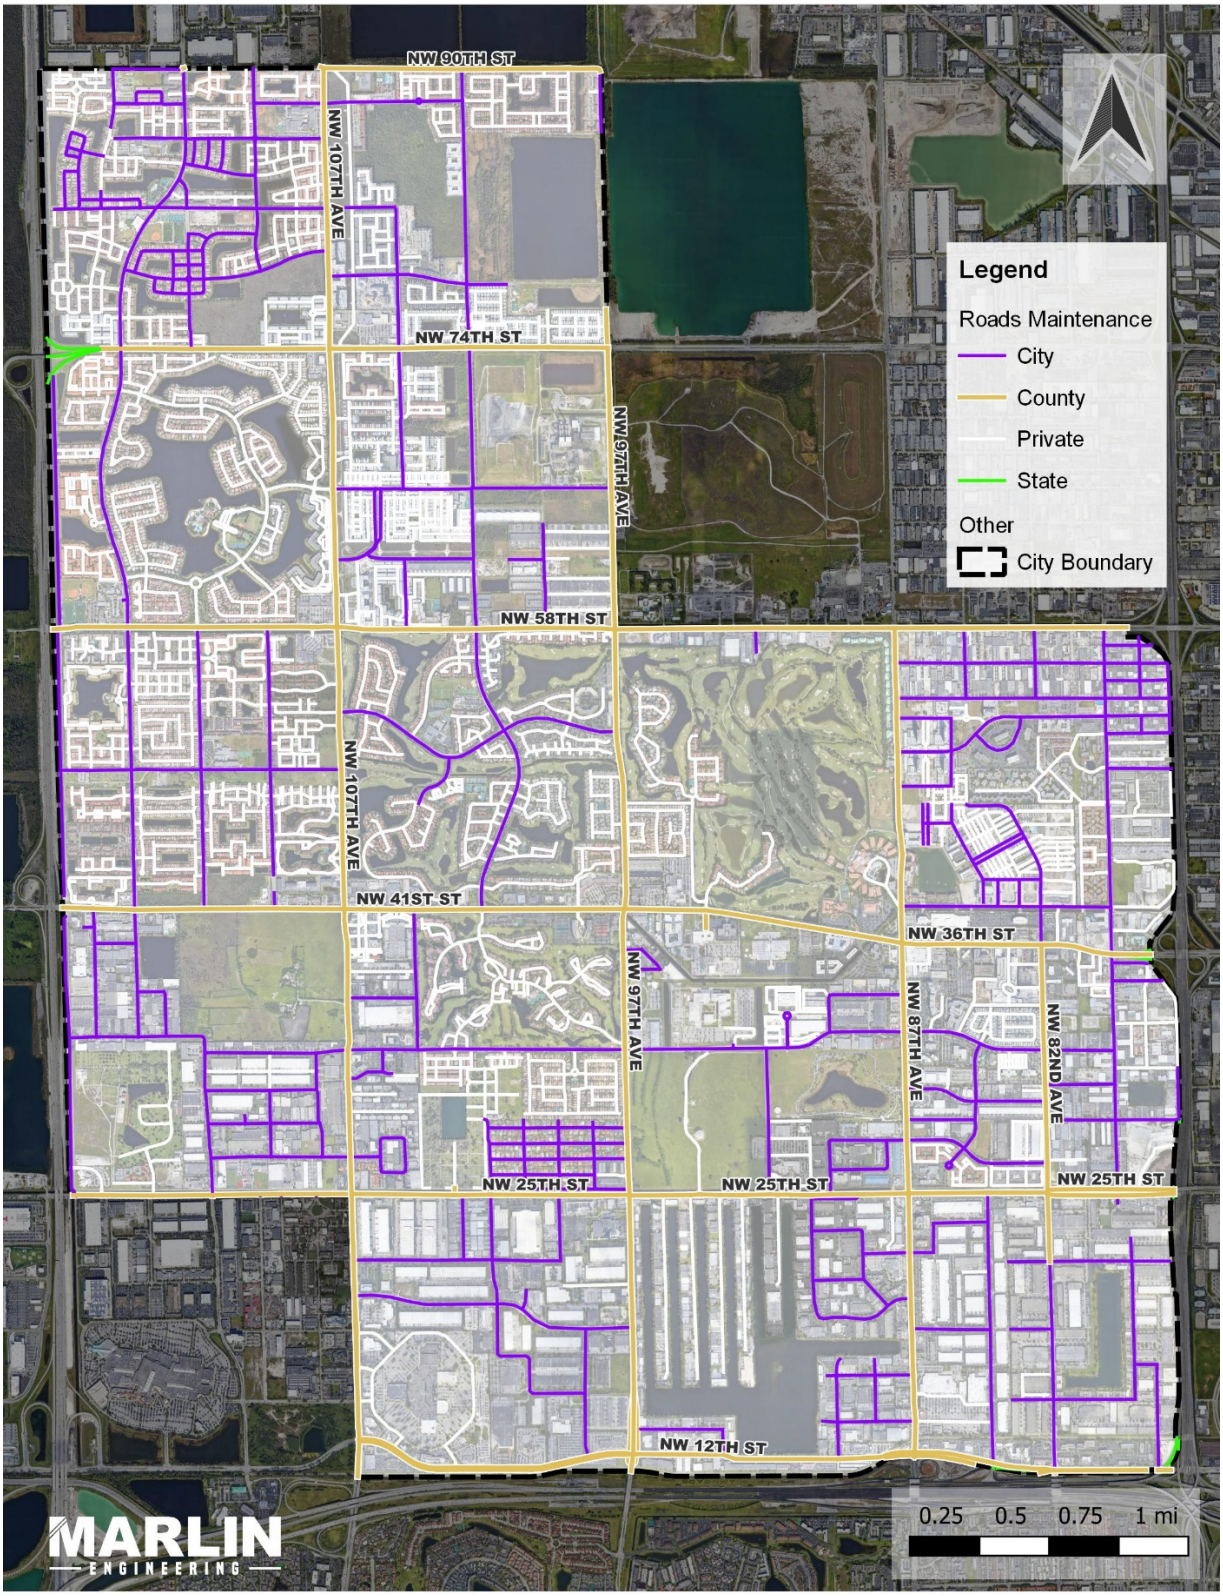

Figure 1. City of Doral Roads Map

2.2 Pavement Conditions and Rating

As a general rule, Florida's highways are typically rated on three criteria: wheel path rutting, cracking, and ride quality. If a section of highway is graded less than 6.4 out of 10 for any of the categories, then the pavement is listed as deficient. However, where the posted speed is 45 mph or less, a rating of 5.4 or less for ride quality is deemed deficient.

As part of the 2022 FDOT Pavement Evaluation Method, the distress of each roadway section is visually estimated for the following:

- Cracking by Class (IB, II, or III)
- Rut Rating
- Patching
- Raveling
- Ride Rating

The network pavement condition survey was performed using ICC's IrisPRO Pave survey vehicles. The IrisPRO Pave is equipped with an ICC inertial profiler, second-generation Laser Crack Measurement System (LCMS-2 from Pavemetrics), Point Gray Ladybug 5+ 30MP 360 camera, and iXBlue A7 with DGPS. The distress data was processed and reported based on the Florida Department of Transportation Flexible Pavement Condition Survey Handbook, 2022. In addition, high-resolution digital images were used. The collected imagery is calibrated and to provide asset inventory information for the City.

2.2.1 Crack Rating

Based on the 2022 FDOT Flexible Pavement Evaluation Method, pavement cracking is one of the most important criteria to determine the pavement condition. Cracking is generally the first sign of failure. If left untreated, cracks in the pavement surface will spread downward through the asphalt until they reach the underlying lime rock base. If a crack reaches the base material, it provides an avenue for water to penetrate the pavement structure. Introduction of water into the pavement base is the surest way to cause a pavement to completely fail, requiring total

reconstruction of the roadway at a cost significantly higher than resurfacing. Consideration is given to three (3) types of cracking in flexible pavements described as follows:

- **Class IB** - Hairline cracks that are less than or equal to ⅛ inch (3.18 mm) wide in either the longitudinal or transverse direction. These are mostly single cracks with no or only a few connecting cracks, cracks are not spalled, and pumping is not evident. These cracks are estimated individually for the total linear length of the cracks. The width of the affected area is considered 1 foot (0.30 m)
- **Class II** - Cracks greater than ⅛ inch (3.18 mm) and less than or equal to ¼ inch (6.35 mm) wide in either the longitudinal or transverse direction. These may have slight spalling and slight to moderate branching; cracks may be sealed; pumping is not evident. Also includes all cracks less than or equal to ¼ inch (6.35 mm) wide that have formed cells less than or equal to 2 feet (0.61 m) on the longest side, also known as alligator cracking. Class II cracks are considered rectangular, and the total affected area in square feet is counted.
- **Class III (including Raveling and Patching)** - Cracks greater than ¼ inch (6.35 mm) wide that extend in a longitudinal or transverse direction and cracks that are opened to the base or underlying material. These cracks often exhibit moderate or severe spalling, and often form a complete pattern, such as alligator cracking. They also include progressive Class II cracking with severe spalling or pumping. Class III cracks are considered rectangular, and the total affected area in square feet is counted.

During the crack rating calculation, all cracking estimations, including raveling and patching, are combine as follows:

Class 1B + Class II + Class III + Raveling + Patching = Total Percent Affected Area

The affected area is calculated for both, inside the wheel path area (CW) and cracking outside the wheel path area (CO). **Figure 2** shows the wheel path designation; while **Table 1** shows the tabulation for crack rating deductions.

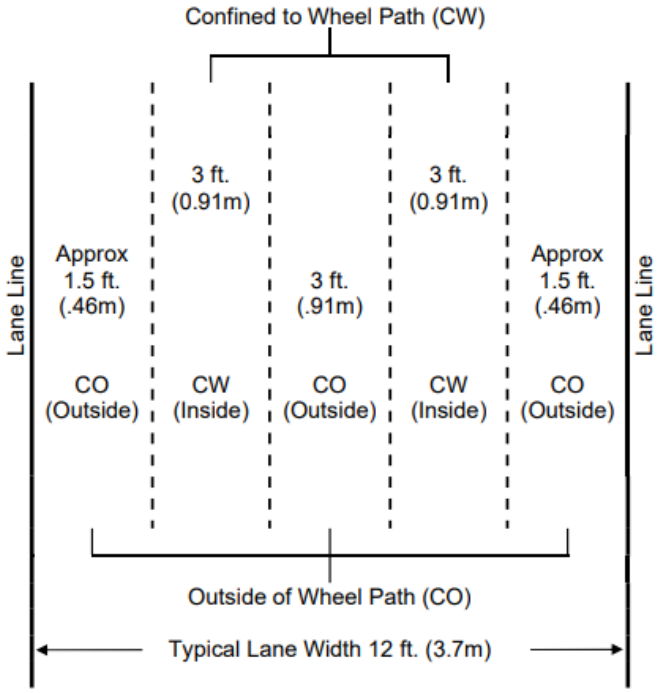

Figure 2. Wheel Path Designation[1]

Table 1. Numerical Deduction for Cracking Method

Percent of Pavement area affected by cracking	CONFINED TO WHEEL PATHS (CW) PREDOMINANT CRACKING CLASS					
	1B CRACKING		II CRACKING		III CRACKING (Including Raveling & Patching)	
	CODE	DEDUCT	CODE	DEDUCT	CODE	DEDUCT
00 -- 05	A	0.0	E	0.5	I	1.0
06 -- 25	B	1.0	F	2.0	J	2.5
26 -- 50	C	2.0	G	3.0	K	4.5
51 +	D	3.5	H	5.0	L	7.0

Percent of Pavement area affected by cracking	OUTSIDE OF WHEEL PATHS (CO) PREDOMINANT CRACKING CLASS					
	1B CRACKING		II CRACKING		III CRACKING (Including Raveling & Patching)	
	CODE	DEDUCT	CODE	DEDUCT	CODE	DEDUCT
00 -- 05	A	0.0	E	0.0	I	0.0
06 -- 25	B	0.5	F	1.0	J	1.0
26 -- 50	C	1.0	G	1.5	K	2.0
51 +	D	1.5	H	2.0	L	3.0

[1] 2022 Flexible Pavement Condition Survey Handbook

Crack rating is finally obtained by input the deductions values in the following formula:

Crack Rating = 10 – (CW + CO)

Cracks in the pavement are generally cause by:

- Poorly constructed paving joints
- Shrinkage of the asphalt layer
- Daily temperature differential
- Cracks in underlying layer that reflect up through the pavement
- Longitudinal segregation caused by the improper pavement installation

Examples of cracks in the pavement are shown in **Figure 3**:

Figure 3. Class III crack, extend in a longitudinal direction

2.2.2 Rut Rating

Wheel path rutting is the most important rating out of the three condition ratings because rutting is considered a safety hazard, especially on high-speed roadways. Rutting is especially hazardous because standing water in wheel paths can cause vehicles to hydroplane and crash. Rut data is collected using an inertial profiler (see **Figure 4** and **Figure 5**) to measure rut depths at posted speeds and record the average rut depth of the two-wheel paths for each section evaluated.

Each rut depth is then assigned a deduct value: ⅛ inch (3.18mm) of rut depth equals one (1) deduct point. The profiler rutting values are presented in **Table 3.**

Figure 4. Inertial Roadway Profiler Sensor Bar

Figure 5. Inertial Profiler Distance Measuring Equipment

Table 2. Profiler Rutting Values

RUT DEPTH (in)	RUT DEPTH (mm)	RANGE (in)	RANGE (mm)	DEDUCT	RUT RATING
0	0	0.00 - 0.06	0.00 - 1.59	0	10
1/8	3.18	0.07 - 0.19	1.60 - 4.76	1	9
1/4	6.35	0.20 - 0.31	4.77 - 7.94	2	8
3/8	9.53	0.32 - 0.44	7.95 - 11.11	3	7
1/2	12.7	0.45 - 0.56	11.12 - 14.29	4	6
5/8	15.88	0.57 - 0.69	14.30 - 17.46	5	5

RUT DEPTH (in)	RUT DEPTH (mm)	RANGE (in)	RANGE (mm)	DEDUCT	RUT RATING
3/4	19.05	0.70 - 0.81	17.47 - 20.64	6	4
7/8	22.23	0.82 - 0.94	20.65 - 23.81	7	3
1	25.4	0.95 - 1.06	23.82 - 26.99	8	2
1 1/8	28.58	1.07 - 1.19	27.00 - 30.16	9	1
1 1/4 +	31.75	1.20 +	30.17 +	10	0

Manual rut depths are required if the rated section cannot be surveyed by the profiler. However, at the rater's discretion there may be short sections from which automated rut data can be collected even though ride data would not be valid (due to speed, section length and accelerometer sensitivity). When manual rut measurements are necessary, three evenly distributed measurements per mile, using a six-foot straight edge and scale, are required. Measurements will be recorded to the nearest ⅛ inch (3.18 mm). **Table 3** shows the manual rut values.

The Rut Rating is obtained by subtracting from ten (10) the deduct value associated with the profiler rut depth or manual rut depth. A Rut Rating of 10 indicates a pavement with only minor rutting.

Table 3. Manual Rutting Values

RUT DEPTH (in)	RUT DEPTH (mm)	DEDUCT	RUT RATING
0	0	0	10
1/8	3.18	1	9
1/4	6.35	2	8
3/8	9.53	3	7
1/2	12.7	4	6
5/8	15.88	5	5
3/4	19.05	6	4
7/8	22.23	7	3
1	25.4	8	2
1 1/8	28.58	9	1
1 1/4 +	31.75	10	0

Rutting can form through the deformation of the asphalt concrete pavement or subbase material. It is more common near intersections where there is braking and stopping traffic. The occurrence

of rutting is caused mainly by: insufficient compaction of Hot Mix Asphalt (HMA) layers during construction, inadequate pavement structure and improper asphalt mix. This type of distress is frequently associated with cracks on the wheel path that weakens the pavement subsurface by letting moisture pass through. The use of the roadway by heavy trucks also contributes to the formation of wheel path rutting when pavement is not properly designed.

Figures 6 and **7** show examples of rutting in different stages:

Figure 6. Light rutting

Figure 7. Advanced rutting with severe pavement displacement

2.2.3 Ride Rating

Ride quality is a measure of what the traveling public feels when they drive the roadways. Poor ride quality causes poor public perception and contributes to increase user costs in the form of vehicle maintenance. However, a poor ride does not necessarily pose a safety hazard nor does its deferred remediation necessarily result in higher maintenance costs; ride smoothness is given the least weight of the three ratings.

The International Ride Index (IRI) and Ride Number (RN) are calculated using the longitudinal profile data for each wheel path collected from the inertial profiler. The IRI is a mathematical processing of the longitudinal profile generated by the profiler to compute and report road roughness (ASTM E1926). IRI is reported in units of inches per mile (in/mi) and is scaled with 0 being the smoothest and the upper limit being infinite. The RN is also a mathematical processing of the longitudinal profile measurements and is an estimate of subjective ride quality (ASTM Standard E1489). The data is collected at the respective posted speeds and collected at the smallest sample interval possible (approximately less than one inch). The data is then processed using a profile distance of 6 inches, a moving average of 12 inches, and a 300-foot wavelength filtering. The IRI to Ride rate values are presented in **Table 4.**

Table 4. IRI to Ride Rating Values

IRI Range	Ride Rating	IRI Range	Ride Rating
1 - 12	10.0	162 – 166	5.5
13 - 28	9.2	167 – 170	5.4
29 - 32	9.1	171 – 175	5.3
33 - 34	9.0	176 – 180	5.2
35 - 37	8.9	181 – 185	5.1
38 - 39	8.8	186 – 190	5.0
40 - 42	8.7	191 – 195	4.9
43 - 46	8.6	196 – 200	4.8
47 - 50	8.5	201 – 206	4.7
51 - 54	8.4	207 – 212	4.6
55 - 58	8.3	213 – 218	4.5
59 - 62	8.2	219 – 224	4.4
63 - 66	8.1	225 – 230	4.3
67 - 70	8.0	231 -236	4.2

IRI Range	Ride Rating	IRI Range	Ride Rating
71 - 74	7.9	237 – 242	4.1
75 - 78	7.8	243 – 249	4.0
79 - 82	7.7	250 – 256	3.9
83 - 86	7.6	257 – 264	3.8
87 - 89	7.5	265 – 271	3.7
90 - 93	7.4	272 – 278	3.6
94 - 97	7.3	279 – 285	3.5
98 - 100	7.2	286 – 293	3.4
101 - 104	7.1	294 – 300	3.3
105 - 107	7.0	301 – 310	3.2
108 - 111	6.9	311 – 318	3.1
112 - 115	6.8	319 – 327	3.0
116 - 118	6.7	328 – 337	2.9
119 - 122	6.6	338 – 345	2.8
123 - 125	6.5	346 – 354	2.7
126 - 129	6.4	355 – 362	2.6
130 - 133	6.3	363 – 371	2.5
134 - 137	6.2	372 – 373	2.4
138 - 140	6.1	374 – 385	2.3
141 - 144	6.0	386 – 397	2.2
145 - 149	5.9	398 – 406	2.1
150 - 152	5.8	407 – 533	2.0
153 - 157	5.7	>=534	1.0
158 - 161	5.6		

The following points are critical to the collection and reporting of Ride Rating:

- The Ride Rating (RR) must not decrease more than 0.8 points or increase more than 0.4 points of the previous year's survey. For sections of New Pavement or New Construction, RR values must be 8.0 or more.
- Braking abruptly or accelerating rapidly (greater than 3 mph per second) produces invalid data. If this occurs the section must be re-tested.
- Moisture on the surface of the pavement may affect the signal being returned from the sensor, causing invalid data. Do not test if pavement is wet.

2.2.4 Raveling

Raveling is the wearing away of the pavement surface caused by the dislodging of aggregate particles and are classified as follows:

- Light - The aggregate and/or binder has begun to wear away but has not progressed significantly, with some loss of aggregate.
- Moderate - The aggregate and/or binder has worn away and the surface texture is becoming rough and pitted; loose particles generally exist; loss of aggregate has progressed
- Severe - The aggregate and/or binder has worn away and the surface texture is very rough and pitted, loss of aggregate very noticeable

The underlying causes of raveling are most related with low quality of the asphalt mix when applied (cold, overheated, dirty aggregate) and with aged asphalt binder.

Table 5 presents the codification system for raveling and **Figures 8, 9** and **10** show examples of this type of pavement deterioration.

Table 5. Raveling Evaluation Codes

PERCENT OF PAVEMENT AREA AFFECTED BY PATCHING	RAVELING SEVERITY AND CODE		
PERCENT	LIGHT	MODERATE	SEVERE
01 – 05	1	1	1
06 – 25	2	2	2
26 – 50	3	3	3
51 +	4	4	4
Note: Code the Predominant Severity Level only.			

Figure 8. Pavement showing severe raveling

Figure 9. Pavement showing moderate raveling

Figure 10. Pavement showing light raveling

2.2.5 Patching

A patch is an area of the pavement that has been replaced with a newer material after the time of original construction, indicating that there has been repaired. Only significant areas of patching should be considered when performing the PCS. The patching evaluation codes are provided in **Table 6**.

Table 6. Patching Evaluation Codes

PERCENT OF PAVEMENT AREA AFFECTED BY PATCHING	
PERCENT	CODE
01 -- 05	1
06 -- 25	2
26 -- 50	3
51 +	4

Examples of patching areas are shown in **Figures 11** and **12**.

Figure 11. Longitudinal patching on pavement

Figure 12. Roadways showing pavement patching

3.0 Data Collection

Data collection involved automated surveying of the existing roadway surface of approximately 63 centerline miles of City-owned roadway including image capture of all City owned roads taken every 8 feet. The digital roadway imaging was taken from six (6) high resolution cameras mounted on the survey vehicle; the images from the different cameras can be assembled into a continuous 360-degree view. The images position and orientation data are geocoded and stored on the in-vehicle computers (see **Figures 13** and **14**) to be processed and input into the GIS database along with the data.

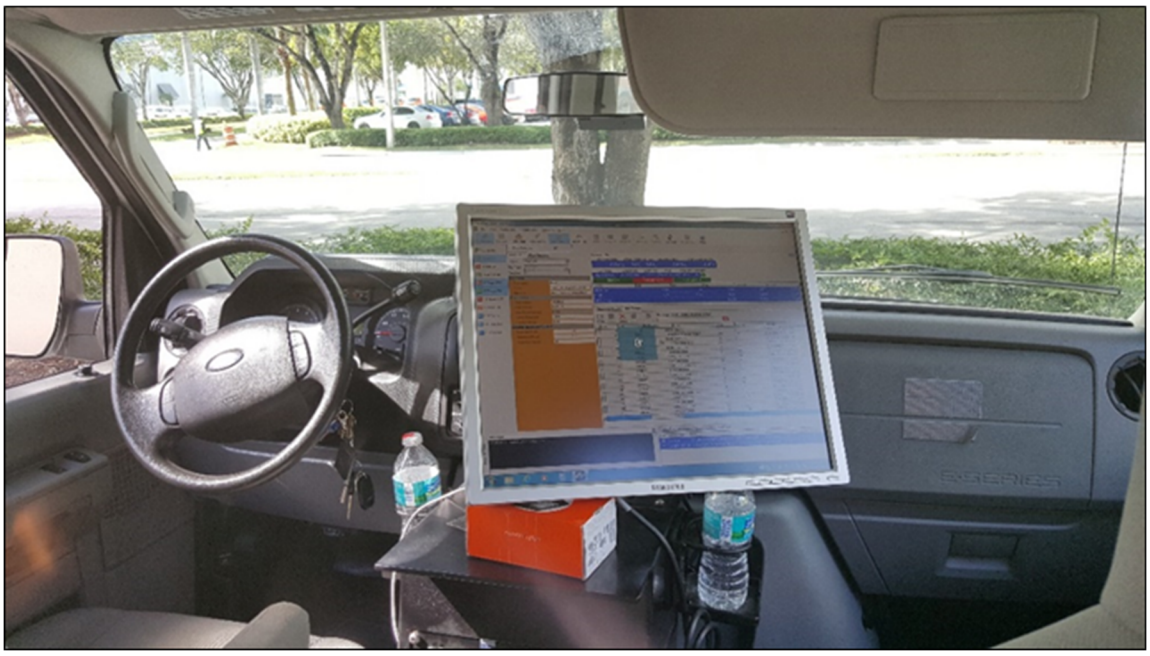

Figure 13. In-Vehicle Computer #1

Figure 14. In-Vehicle Computer #2

It should be noted that the segment termini for the data collection from this effort do not necessarily coincide with those from the previously completed PCS reports. The results of the current PCS are provided in **Appendix A**.

4.0 Pavement Prioritization

The main purpose of the PCS is to assist the City of Doral in the decision-making process regarding M&R activities and help with the scheduling of M&R during the appropriate stages of pavement deterioration. The prediction of the performance of the pavement involves forecasting the time (either in years or accumulated axle loadings) at which the pavement will reach a level of condition requiring rehabilitation.

The performance of a given rehabilitation strategy is very difficult to predict, but is particularly sensitive to the following factors:

- Type of distress present and the structural condition of the pavement;
- The structural design (thickness, joints, etc.)
- The extent, type, and quality of previous repairs; and materials used;
- The truck traffic level;
- Climate conditions

Consequently, a prioritization methodology was developed to schedule M&R activities based on the existing levels of distress of the pavement and the age of pavement at the time of survey to identify near-term (0-1 year), midterm (2-5 years) and long-term (over 5 years) projects. The prioritization methodology is as follows:

1) ***Identify deficient roadway segments*** - The first step of the process is to identify the roadway segments that are currently deficient per established FDOT 2022 Flexible Pavement rating criteria (6.4 out of 10 for any of the rating categories or a rating of 5.4 or less for ride quality where the posted speed is 45 mph or less). It should be noted that several segments were identified as being deficient based on their ride ratings but were resurfaced as part of the previous 5-Year M&R effort; these segments were not recommended for rehabilitation and should be reassessed as part of the next M&R. Based on the data road network maintained by the City, a total of 352 segments were identified with a ride rating less than 5.4 out of the total 579 segments.

A map of the currently deficient roadway segments is presented in **Figure 15**.

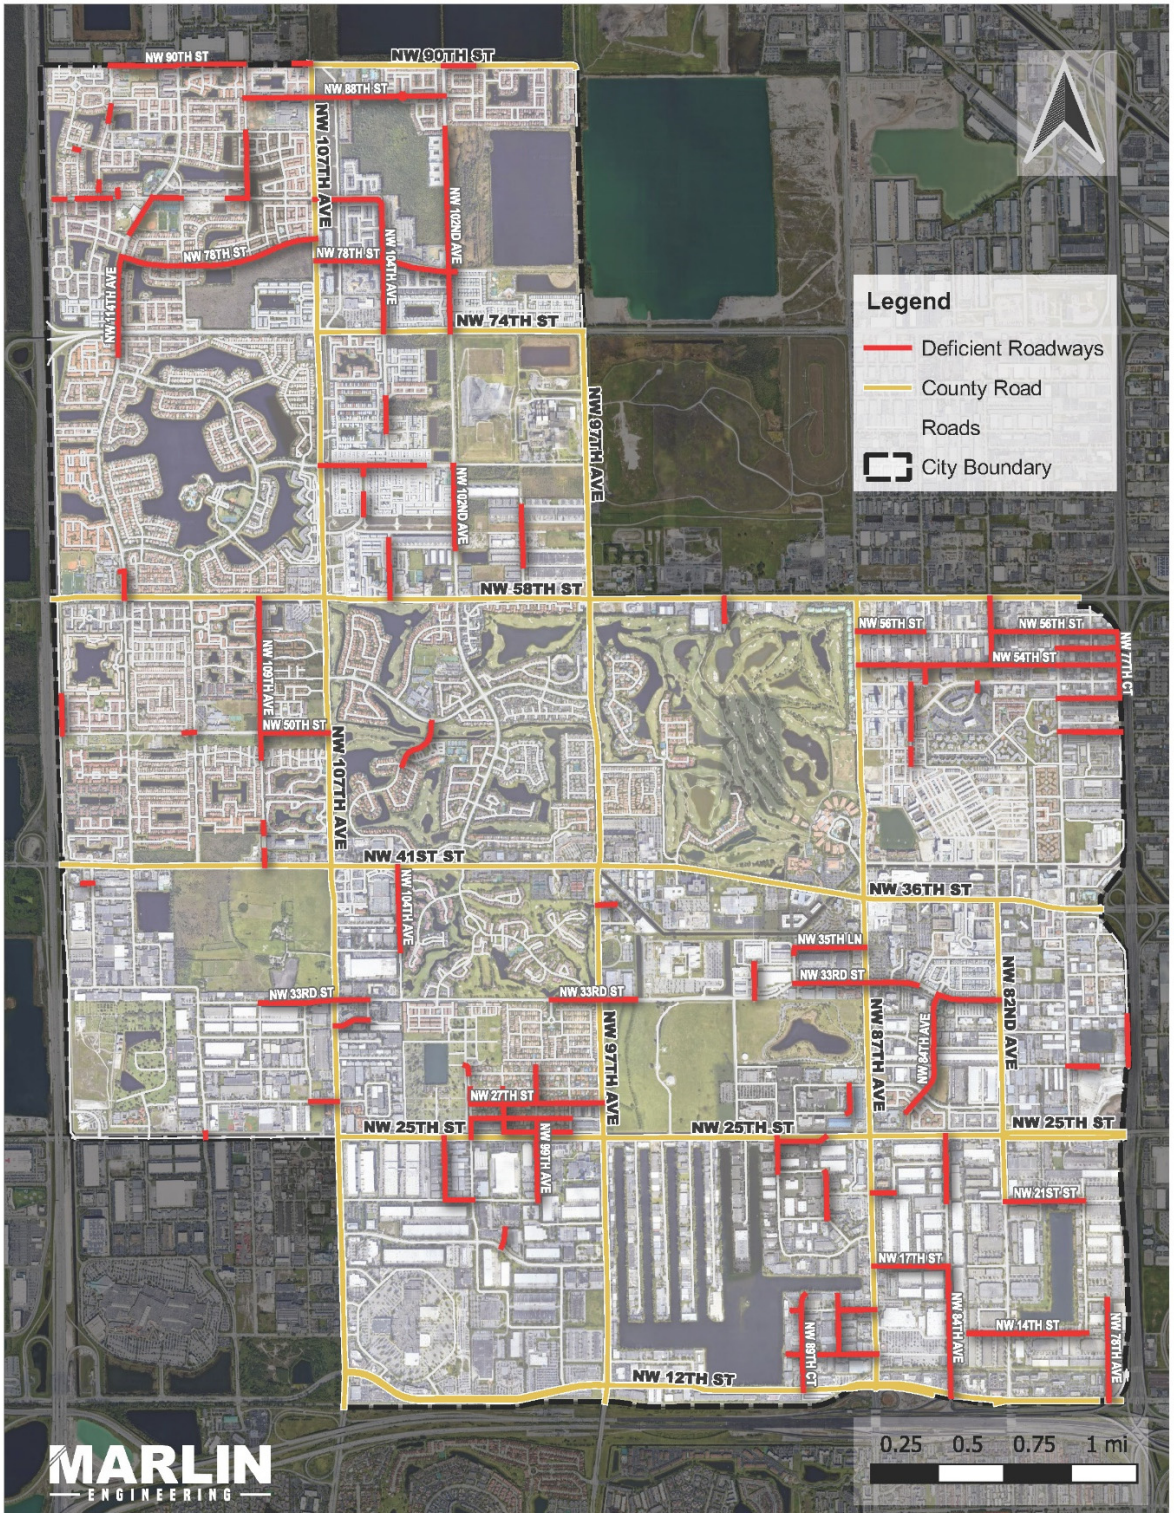

Figure 15. City of Doral Deficient Roadway Segments

2) ***Identify segments that are under construction or currently programmed*** – The City of Doral's website and current Five-Year Capital Improvement Plan (CIP) were reviewed to identify roadway segments that are either under construction (2017) or already programmed to be improved within year 2021. For the purposes of this report, roadway segments identified as part of this step will be considered as "mitigated/improved" and will be excluded from the prioritization process. Improvement projects considered in the CIP will only include resurfacing and roadway widening projects; segments with projects listed as "drainage improvement" or "roadway improvement" will not be considered as "mitigated/improved". After careful review of the CIP, 191 segments were selected for the pavement M&R. A map of all City roads that are either under construction or programmed to be improved is presented in **Figure 16.**

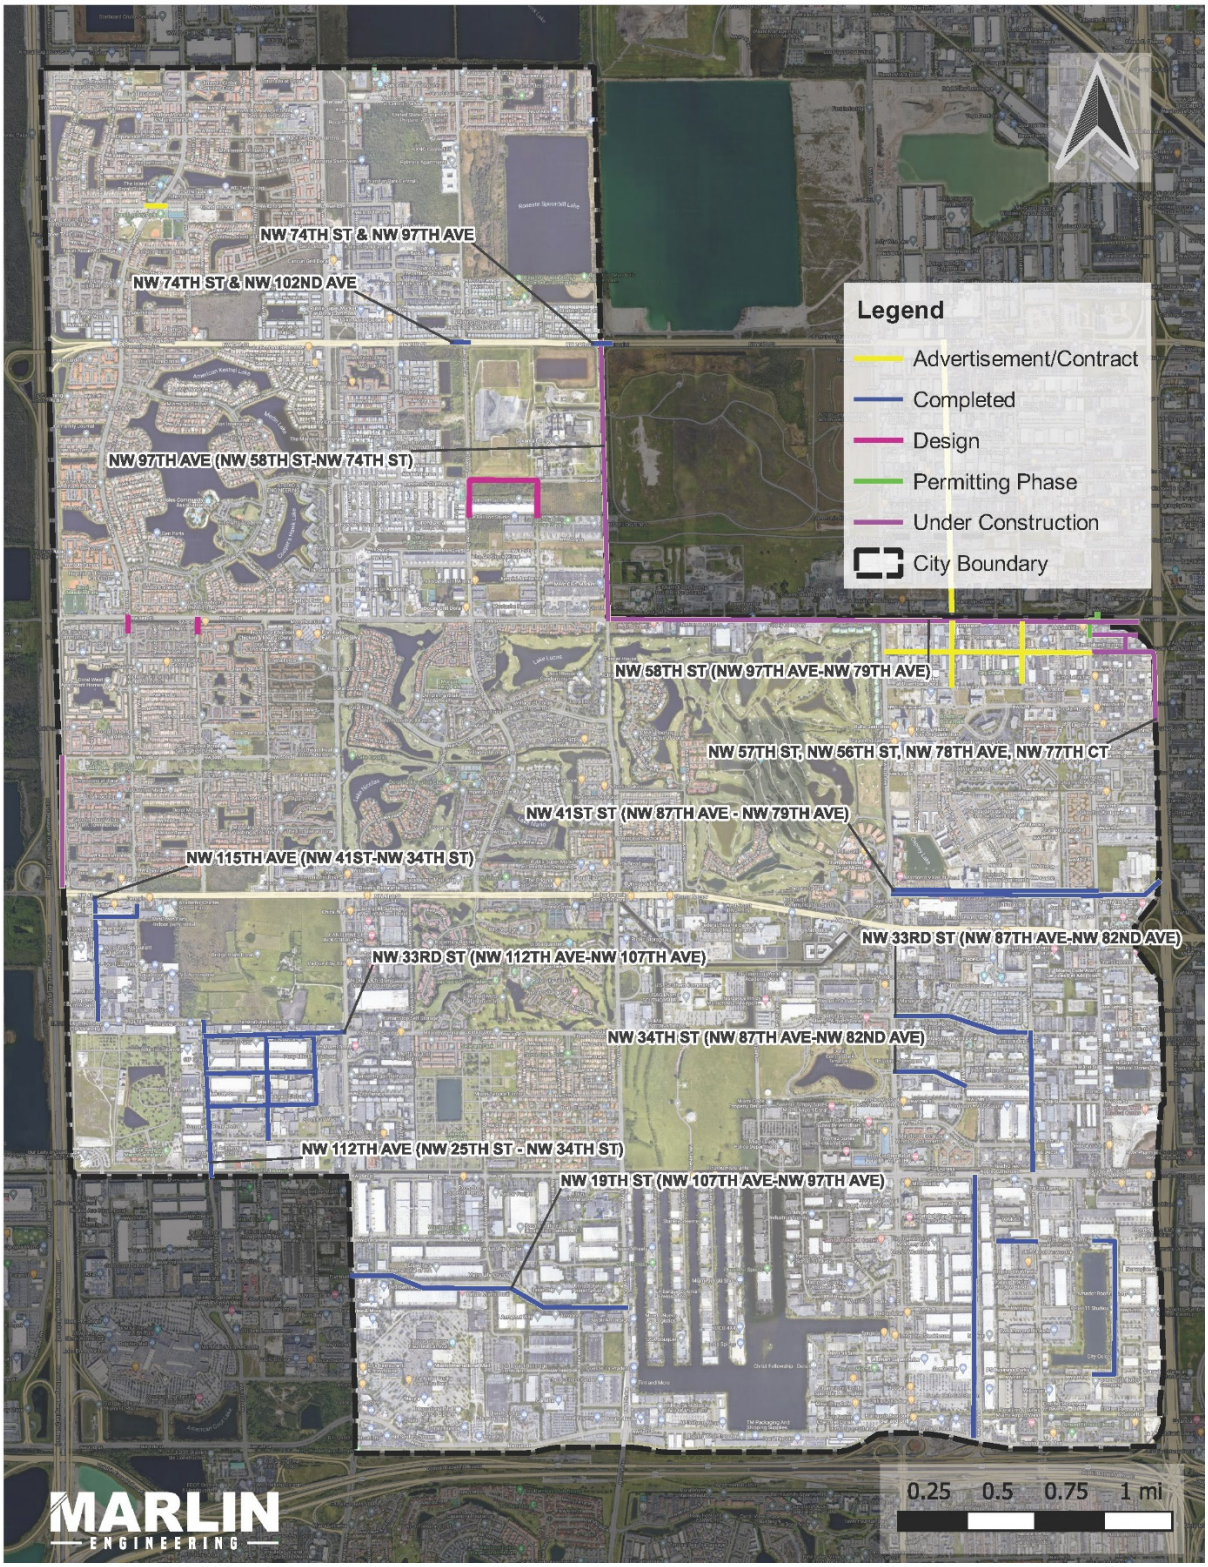

Figure 16. City of Doral Under Construction and Programmed Roadway Segments

3) ***Identify Near-Term Projects*** – Roadway segments identified as having a deficient crack or rut rating (below 6.4) or a ride rating below 5.4 will automatically be considered for near-term improvements (Years 1 and 2). Based on the above criteria, 191 segments were selected for the near-term improvements; 108 were selected for Year 1, while 83 were selected for Year 2.

4) ***Identify Mid-Term Projects*** – Roadway segments that have not been identified as currently being deficient but have a pavement age over 14 years (or expected to be over 14 years old within the next 5 years) should be scheduled for resurfacing between Year 3 and Year 5. Based on the pavement age calculations from the previous study and a desktop review using Google Street views to identify the possible year when the resurfacing of the pavement work was done for segments with missing pavement ages, a total of 102 segments were identified as Mid-Term projects (Year 3 to Year 5).

   The 14-year threshold was selected considering the pavement's design period, falls between 8 and 20 years (FDOT "Flexible Pavement Design Manual"). On average, from the moment the pavement reaches over 14 years, the deterioration curve starts falling dramatically. After this period, costs of rehabilitation projects could be significantly higher, as visualized in **Figure 17**, Pavement's Deterioration Curve.

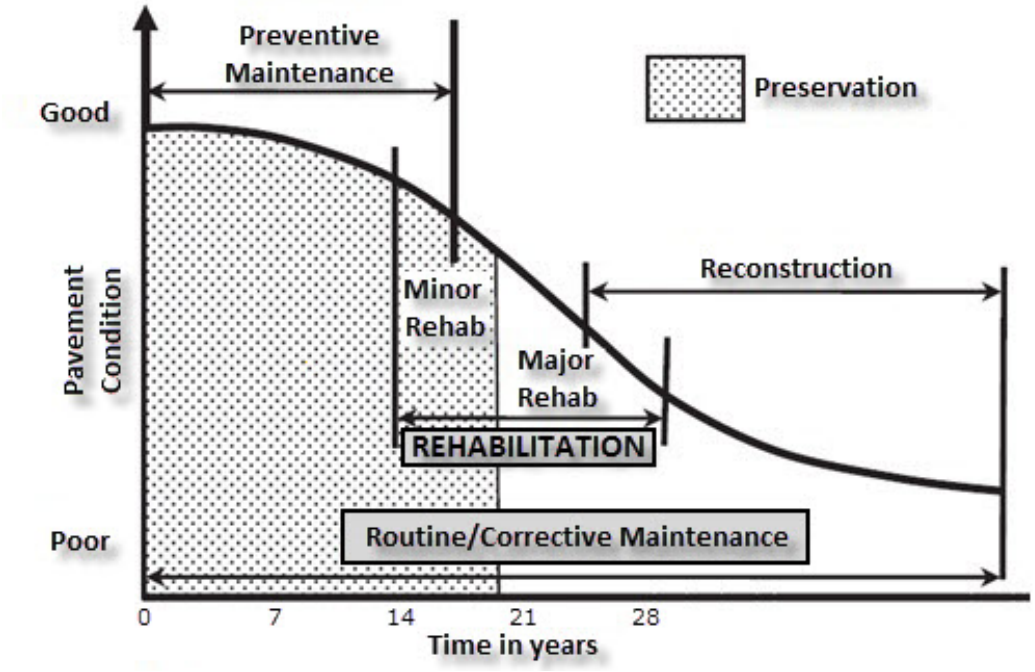

Figure 17. Pavement's Deterioration Curve*[2]

5) ***Identify Long-Term Projects*** – Roadway segments that have not been identified as currently being deficient and have a pavement age of less than 14 years should be considered as long-term projects (over 5 years); these segments will be evaluated as part of the next PCS to further prioritize M&R activities. After selecting the near-term and mid-term projects, a total of 286 segments were selected for the long-term.

The roadway segment prioritization map is presented in **Figure 18.**

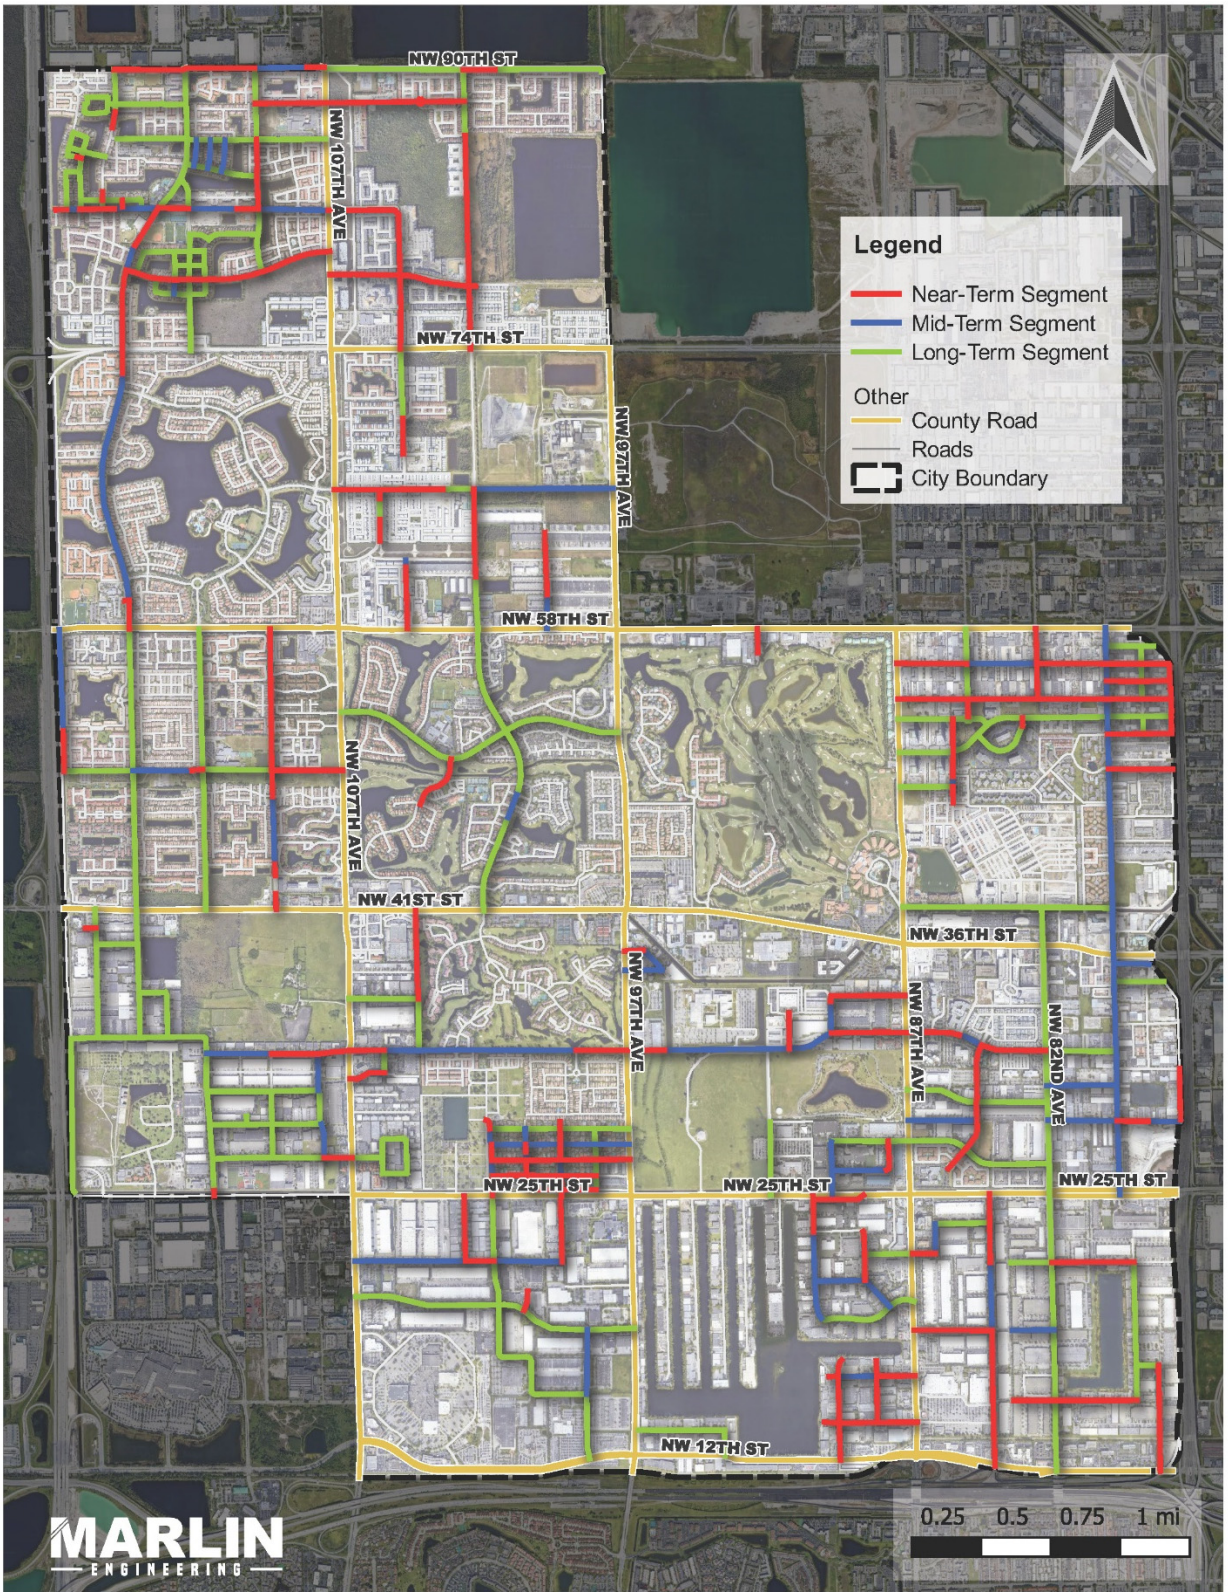

Figure 18. City of Doral Roadway Segment Prioritization Map

5.0 M&R Strategies and Unit Costs

M&R Planning is a systematic approach where a set of activities are applied to pavement sections based on distresses within pavement, budgeting and condition indicators. This approach establishes a work plan based on a selected or specified minimum distress rating for the entire network. Based on the aforementioned prioritization method, M&R activities are scheduled for the year in which each distress rating for each pavement section falls or is expected to fall below the established minimum threshold: 6.4 out of 10 for any of the rating categories or a rating of 5.4 or less for ride quality where the posted speed is 45 mph or less.

A preset M&R activity was determined based on existing distress levels to determine the overall cost for each project and help the City of Doral budget accordingly. The average cost for each M&R activity was developed based on FDOT's "*History of 12 months moving statewide average*" (August 2022) and are presented in **Table 7**.

Table 7. FDOT Historical Average Cost

M&R Work	Unit of Measurement	Average Price
Milling Existing Pavement (2" Average Depth)	SY	$ 2.61
Milling Existing Pavement (1 1/2" Average Depth)	SY	$ 2.85
Milling Existing Pavement (1" Average Depth)	SY	$ 2.27
Superpave Asphaltic Concrete (Traffic C)	TN	$ 126.55

6.0 Rehabilitation Needs and Budget Analysis

A five-year M&R plan was developed to help with the prioritization and allocation of funds over the next five years; a contingency of 20% was added to the cost of the projects to account for unforeseen costs and fluctuations in the price of construction.

It should be noted that special consideration was given to the programming of adjacent segments with dissimilar distress ratings; the scheduling of M&R activities may be rearranged to minimize Mobilization and Maintenance-of-Traffic (MOT) costs and also to diminish impacts to the traveling public. Yearly budget distribution was also taken into account when programming M&R activities.

A detailed breakdown of the cost per segment is provided in **Appendix B** and summarized in **Table 8**; the five-year M&R plan is presented in **Figure 19**.

Table 8. Five-Year Budget Summary

	Year					Total 5-year Budget
	2023	2024	2025	2026	2027	
Project Cost	$1,822,430.53	$1,621,367.18	$131,592.65	$84,728.73	$1,820,437.65	$5,480,556.74

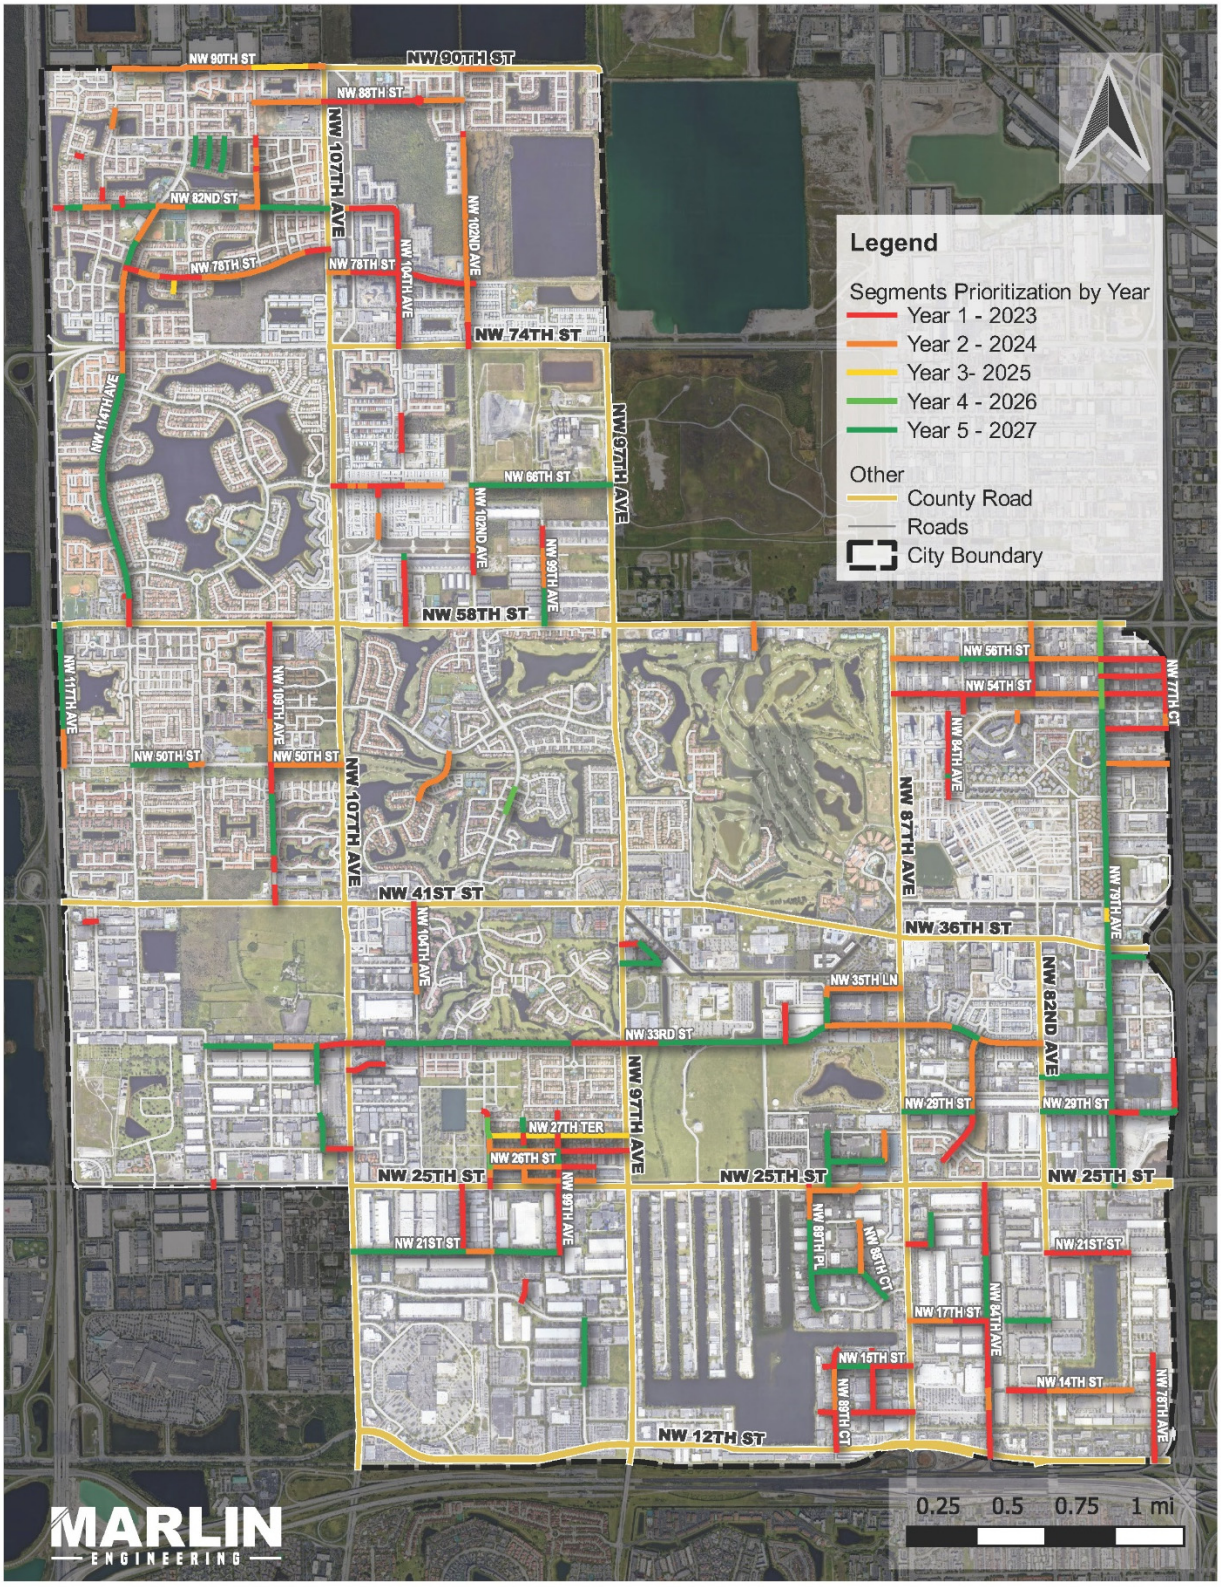

Figure 19. Five-Year M&R Plan

7.0 Conclusions

MARLIN Engineering, Inc. was retained by the City of Doral to perform an evaluation of pavement conditions on all City-maintained roadways. This data was used to rate the pavement based on guidelines from the Florida Department of Transportation's (FDOT) *2022 Flexible Pavement Condition Survey (PCS)* Handbook.

Based on the results of the pavement assessment, and following prioritization criteria, a five-year M&R plan was developed to help with the prioritization and allocation of funds over the next five years; a contingency of 20% was added to the cost of the projects to account for unforeseen costs and fluctuations in the price of construction. The scheduling process of M&R activities considered adjacent segments with dissimilar distress ratings to minimize Mobilization and Maintenance-of-Traffic (MOT) costs and to diminish impacts to the traveling public. Yearly budget distribution was also taken into account when conforming the M&R Plan.

A summary of the cost per year is provided below.

	Year					Total 5-year Budget
	2023	2024	2025	2026	2027	
Project Cost	$1,822,430.53	$1,621,367.18	$131,592.65	$84,728.73	$1,820,437.65	$5,480,556.74
