|--|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>FedRAMP Authority to Operate from Department of Health and Human Services<br/>CSA 'Consensus Assessments Initiative'<br/>JIPDC (Japan Privacy Seal)<br/>Tuv (Germany Privacy Mark)<br/>TRUSTe</p> <p>HIPAA<br/>In provisioning and operating the services, Salesforce complies with the provisions of HIPAA's Privacy Rule and Security and the HITECH Act that are applicable to business associates. Salesforce's customers are still responsible for complying with the same in their capacity as a covered entity or business associate using the Salesforce services. The services' features permit customers to customize use as per a compliance program for HIPAA (including the HITECH Act) and many customers store protected health information (PHI) on our service. From a legal standpoint, some of our customers have asked Salesforce to assist them in meeting their compliance obligations; for example, by entering into business associate agreements (BAA) to address formal legal requirements pertaining to use and disclosure of protected health information (PHI).</p> <p>FERPA<br/>Salesforce maintains appropriate administrative, physical, and technical safeguards to help protect the security, confidentiality, and integrity of data our customers submit to the Salesforce Services as Customer Data. Salesforce's customers are responsible for ensuring the security of their Customer Data in their use of the service and implementing any necessary customer-controlled settings. To aid, Salesforce offers robust security functionality that provides our customers the flexibility to use the application in a configuration that furthers compliance with local data protection laws and regulations.</p> <p>While Salesforce complies with applicable law in provisioning and operating the Salesforce services, it is the sole responsibility of Salesforce's customers to ensure compliance with applicable laws in their respective uses of the Salesforce services. PCI-DSS Salesforce is PCI Level 1 compliant and has received a signed Attestation of Compliance (AoC) for the Payment Card Industry Data Security Standard (PCI-DSS). Salesforce customers who must adhere to PCI compliance may store personal account numbers ("PAN" or "credit card numbers") in Salesforce, with the following caveats:</p> <ul style="list-style-type: none"> <li>- PANs may only be stored in a custom field encrypted via Classic Encryption or supported field types via the Platform Encryption functionality. PANs must not be stored in clear text fields, attached files, or any other location.</li> <li>- Customer administrators must configure Salesforce features to support their organization's PCI controls. NIST SP 800-171 NIST Special Publication 800-171 is intended for use by federal agencies when agencies are providing CUI to nonfederal organizations (or when CUI is developed by those organizations for federal agencies) for purposes unrelated to information processing. In other words, the nonfederal organizations are not operating their information systems to process agency data, including CUI, on behalf of the agency but rather for other purposes (e.g., when designing or producing an aircraft, performing a study, or conducting background investigations for security clearances).</li> </ul> <p>Salesforce recommends that its customers use the classifications as detailed in FIPS 199.</p> <p>FIPS 140-2, FIPS 197, FIPS 199, and FIPS 200<br/>On May 23, 2014 Salesforce achieved a FedRAMP Agency Authority to Operate at the moderate impact level (as described in FIPS 199 and 200) issued by Health and Human Services (HHS) for the Salesforce Government Cloud. Additionally, on May 15, 2015, HHS, as the FedRAMP authorizing agency, approved the Salesforce Government Cloud authorization package that was updated based on annual attestation requirements and updates to the FedRAMP baseline which is FISMA compliant and based on the current release of NIST SP 800-53 Rev. 4.</p> |

|            | <p>As part of the Salesforce Government Cloud, Salesforce is capable of responding to FIPS 140-2/3 cryptographic implementations for data being transferred between the customer's web browser and Salesforce. Data that resides within Salesforce's protected boundary does not use FIPS 140-2 validated encryption as compensating/mitigating controls are in place to protect data.</p> <p>Additional information is provided below.</p> <p>Data Transmission between the customer's web browser and Salesforce:<br/>Salesforce employs cryptographic mechanisms to protect information during transmission. All transmissions between the user and Salesforce are encrypted by default with a 2048-bit Public Key. Our service uses International/Global Step Up certificates. We support one-way TLS, in which customers create secure connections before sharing private data. Secure routing and traffic flow policies ensure that customer traffic is encrypted entering Salesforce until the load balancer decrypts the traffic. The load balancers decrypting the traffic are FIPS 140-2 compliant and are located inside of the Salesforce Government Cloud isolation boundary.</p> <p>Data Transmission for Backup Media:<br/>Media containing customer data is not transported outside of controlled salesforce.com areas and therefore relies on physical access controls to protect the data.</p> <p>Data at Rest:<br/>NIST 800-53 Rev. 3 states in SC-28, "Information at rest refers to the state of information when it is located on a secondary storage device (e.g., disk drive, tape drive) within an organizational information system." SC-28 also states, "Organizations may choose to employ different mechanisms to achieve confidentiality and integrity protections, as appropriate." All secondary storage media (hard drives, disk drives, and tapes) containing customer data are maintained within Salesforce's secure production data centers until the media has been sanitized and destroyed. Salesforce relies on physical access controls as a compensating control to protect the data.</p> <p>Primary Data Storage:<br/>User passwords are stored in the RDBMS encrypted via the SHA algorithm with a 256-bit hash. This is a one way hash. The passwords are encrypted by the application.</p> <p>For primary data storage, Salesforce provides customers with a built-in capability to apply field-level encryption, using 128-bit keys with Advanced Encryption Standard (AES) encryption (as defined by FIPS 197), for a selection of custom fields included in the Salesforce Platform and CRM applications. Field-level encryption ensures the data associated with designated fields is encrypted in storage.</p> |
| ServiceNow | <p>ServiceNow's security policy is based on ISO27001:2013 and has been since 2012. ServiceNow also has annual SSAE 16 SOC 1 Type 2 and SOC2 Type 2 attestations with controls being based off NIST 800-53.</p> <p>The ServiceNow Service Automation Government Cloud Suite is a FedRAMP Compliant Cloud System with a JAB Provisional Authorization. This cloud offering has regulatory restrictions to the types of tenants that can use it. ServiceNow's FedRAMP compliant and standard commercial datacenter environments are virtually identical. The differences that do exist, such as only allowing access to specially adjudicated US citizens, exist for regulatory reasons not because the environment is superior in some way.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| SAP | Ariba          | <p>We are audited and certified by independent third-party auditor PricewaterhouseCoopers (PwC) for compliance with ISAE 3402 SOC1 Type II, SOC2 and SOC3 every six months. Upon completion of the audit, an attestation letter is issued, stating our compliance. In addition, our primary hosting facility (Equinix) infrastructure is audited for compliance with SSAE 16 SOC1 Type II. The Service Organization Controls report (SOC) is aimed at three different audiences. SOC1 (aimed at financial auditors) is the same type of report as the SAS70 but also includes an attestation letter signed by both our company and the auditor. SOC2 is aimed at IT and security practitioners. The SOC3 is the publicly viewable web seal to show that we have been audited.</p> <p>In addition, we have attained PCI (Payment Card Industry) - DSS (Data Security Standard) certification as a Level 1 Service Provider and compliance with the Visa USA Cardholder Information Security Program (CISP) and MasterCard Site Data Protection (SDP) program. These programs were created specifically for merchants and service providers who process, store, or transmit cardholder data. The PCI DSS is a set of comprehensive requirements for enhancing payment account data security which was developed by the founding payment brands of the PCI Security Standards Council, including American Express, Discover Financial Services, JCB International, MasterCard Worldwide and Visa Inc. It was developed to help facilitate the broad adoption of consistent data security measures on a global basis. The PCI DSS is a multifaceted security standard that includes requirements for security management, policies, procedures, network architecture, software design, and other critical protective measures. This comprehensive standard is intended to help organizations proactively protect customer account data. CISP and SDP reflect Visa's and MasterCard's respective longstanding commitment to information security.</p> |
|     | Fieldglass     | <p>SAP Fieldglass has achieved the following certifications:</p> <ul style="list-style-type: none"> <li>• ISO 27001</li> <li>• SSAE 16 SOC 1 and SOC 2</li> </ul> <p>HIPPA<br/>Fieldglass does not store Protected Health Information (PHI) on its system and is not required to comply with the Health Insurance Portability and Accountability Act.</p> <p>PCI<br/>The Fieldglass application does not process credit card information. We are not (and are not required to be) PCI compliant.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|     | Hybris         | The Savvis datacenter located in Boston, MA is SSAE16 Type II SOC I Compliant. This replaces the older SAS70 Type II audit standard.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|     | SuccessFactors | We have been audited to the SOC 2 Trust Services Criteria. This signifies that our control objectives and control activities have been examined by an independent accounting and auditing firm, and that these controls fairly presented the controls in operation as of a specific date and were suitably designed to achieve the control objectives. Our SOC 2 audits are conducted semi-annually (May, November) by PricewaterhouseCoopers (PwC). We also hold US Federal FISMA Moderate                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| VMware | <p>VMware IaaS Services</p> <p>ISO/IEC 27001: ISO/IEC 27001 is a globally recognized standard for the establishment and certification of an information security management system (ISMS). vCloud Air continues to maintain a current ISO/IEC 27001 Certification and has recently issued updated certification for ISO/IEC 27001:2013. Achieving certification means that VMware has implemented a holistic security program that conforms with the ISO 27001 standard requirements, both in the security management system and control activities. The audit of the ISMS was completed by Brightline CPAs and Associates - an ANAB accredited certification body.</p> <p>HIPAA: The Health Insurance Portability and Accountability Act of 1996(HIPAA), which has incorporated requirements from the Health Information Technology for Economic and Clinical Health Act (HITECH) of 2009, established national standards for the security and privacy of Protected Health Information (PHI) in the United States. To help customers comply with HIPAA, VMware offers a Business Associate Agreement (BAA) to all interested customers using our US-based data centers. The BAA was designed in conjunction with a leading law firm with expertise in HIPAA and provides fair and reasonable terms for healthcare providers, insurers, and other organizations. VMware has completed an independent third party examination of vCloud Air against applicable controls of HIPAA.</p> <p>SOC 1 (SSAE16/ISAE 3402): Service Organization Control (SOC) 1 reports are conducted in accordance with Statement on Standards for Attestation Engagements (SSAE) No. 16 put forth by the Auditing Standards Board (ASB) of the American Institute of Certified Public Accountants (AICPS). The SOC 1 framework reports on internal controls over financial reporting for any service organization such as VMware vCloud Air. SOC 1 aligns to the International Standard on Assurance Engagements (ISAE) 3402 international reporting standards. SOC 1 examinations are specifically intended to meet the needs of the managements of vCloud Air's customers and vCloud Air's customers' auditors, as they evaluate the effect of the controls at vCloud Air on the clients' financial statement assertions. VMware has completed an independent third-party examination of vCloud Air which spans a twelve (12) month review period.</p> <p>SOC 2: The Service Organization Control 2 (SOC 2) report is composed of a comprehensive set of criteria on security, availability, processing integrity, confidentiality, and privacy and is similarly set forth by the America Institute of Certified Public Accountants (AICPA). The SOC 2 reports are</p> |

|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>intended for use by stakeholders (e.g. customers, regulators, business partners, suppliers, directors) of the service organization that have a thorough understanding of the service organization and its internal controls. VMware has completed an independent third-party examination of vCloud Air that also spans a twelve (12) month review period.</p> <p>SOC 3: Trust Services Report for Service Organizations Control 3 (SOC 3) reports are designed to meet the needs of customers who want assurance on the controls at a service organization related to security, availability, processing integrity, confidentiality, or privacy. vCloud Air has completed an independent third-party SOC 3 examination of VMware vCloud Air. SOC 3 is composed of a comprehensive set of trust principles including security, availability, processing integrity, confidentiality and privacy.</p> <p>Cloud Security Alliance: VMware vCloud Air has completed the Cloud Security Alliance (CSA) Consensus Assessments Initiative Questionnaire (CAIQ). CAIQ provides industry-accepted ways to document what security controls exist in IaaS, PaaS and SaaS offerings.</p> <p>FedRAMP Provisional Authority: VMware vCloud Government Service, provided by Carpathian, now has FedRAMP Provisional Authority to Operate issued by the Joint Authorization Board (JAB). FedRAMP is a government-wide program that provides a standardized approach to security assessment, authorization, and continuous monitoring for cloud products and services. This approach uses a "do once, use many times" framework that can reduce government organizations' costs, time, and staff required to conduct redundant agency security assessments. U.S. government agencies can now leverage vCloud Government Service to meet the stringent security and privacy requirements of FedRAMP.</p> <p>FIPS 140-2: VMware vCloud Government Service is fully FIPS 140-2 compliant including hardware which provides its 2-Factor Authentication capabilities.</p> <p>FIPS Pub 199: As discussed previously, vCloud Government Services is certified to store and secure Low Risk Data and Moderate Risk Data as defined by FIPS Pub 199. VMware is willing to work with participating States that require High Risk Data Storage to enhance vCloud Government Services to store and secure this data.</p> <p>FIPS Pub 199: As discussed previously, vCloud Government Services is certified to store and secure Low Risk Data and Moderate Risk Data as defined by FIPS Pub 199. VMware is willing to work with participating States that require High Risk Data Storage to enhance vCloud Government Services to store and secure this data.</p> <p>CJIS: vCGS recently underwent a CJIS assessment by CoalFire, Inc. CJIS is not a certification, it is a policy that must be followed and accredited for each deployment which requires it. The goal of VMware's CoalFire assessment was to create a baseline configuration that can be reused across any CJIS opportunity to accelerate the implementation and accreditation timeframes.</p> <p>FERPA: Like CJIS, FERPA compliance is assessed and confirmed for each deployment that requires it. VMware's vCloud Government Service FedRamp certification and others provide evidence that the underlying infrastructure is capable of meeting rigorous information security and availability requirements. VMware will work with Participating Entities to meet FERPA requirements on a task order basis.</p> <p>PCI Data Security Standards (DSS): Neither vCloud Air nor vCGS are currently PCI certified at this time. VMware will work with Participating Entities to meet PCI requirements on a task order basis.</p> <p>IRS Publication 1075: Because both IRS 1075 and FedRAMP are based on NIST 800-53, the compliance boundary for IRS 1075 is the same as the FedRAMP authorization. This, vCGS complies with IRS Publication 1075 on the basis that it is FedRAMP certified.</p> <p>FISMA: vCGS is FISMA Low and Moderate compliant.</p> |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              | <p>NIST 800-53: NIST 800-53 provides the core controls that must be met to achieve FedRAMP compliance. VMware vCloud Government Service has FedRAMP Provisional Authority to Operate issued by the Joint Authorization Board (JAB), thus we are compliant with NIST 800-53.</p> <p>NIST SP 800-171: VMware vCloud Government Service has FedRAMP Provisional Authority to Operate issued by the Joint Authorization Board (JAB). NIST 800-171 outlines a subset of the NIST 800-53 requirements, and as stated above, VMware vCloud Government Service is compliant with these guidelines. Since NIST 800-171 outlines a subset of the NIST 800-53 requirements, VMware vCloud Government Service is compliant with NIST SP 800-171.</p> <p>FIPS 200: Neither vCloud Air nor vCGS are currently FIPS 200 certified at this time. VMware will work with Participating Entities to meet PCI requirements on a task order basis.</p> <p>VMWare AirWatch</p> <p>The AirWatch Information Security Program is built on the security framework laid out in NIST 800-53. Although AirWatch is not required to register with any regulatory agencies, we provide a suite of tools for our customer's to maintain industry-relevant compliance guidelines within their mobile device fleets. AirWatch has recently been awarded the HP-IAPP Privacy Innovation Award for Most Innovative Privacy Technology by the International Association of Privacy Professionals (IAPP) for our commitment to delivering an EMM platform focused on end-user privacy. To help ensure the confidentiality, integrity, and availability of our cloud offering, we comply with the European Data Protection Directive (95/46/EC) and our top-tier data center partners have undergone SSAE16 SOC2 Type II audits.</p> |
| FireEye      | Currently the standards that apply are SSAE 16 SOC 2 Type 2, with a FedRAMP ATO in place and full FedRAMP certification in process. We are also in the process of becoming FedRAMP ISO 2700x certified.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| VirtueStream | Security is the foundation of our business. Virtustream's xStream™ cloud software assists our customers to meet mandatory Legislative requirements, and achieve and maintain SSAE16, ISAE3402, PCI-DSS 3.0, FISMA, ISO 27001-2005/2013, ISO 9001-2008, HIPAA, CSA STAR and other leading cloud certifications and compliance frameworks in the customer's own environment (when coupled with identified operational and management controls).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

8.6.3 Offeror must describe its security practices in place to secure data and applications, including threats from outside the service center as well as other customers co-located within the same service center.

|    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CA | APM      | CA technologies understands that security is a top concern when evaluating cloud-based applications, which is why CA technologies operations worldwide conform to rigorous certification, compliance and security programs and processes. In addition, we contract with independent auditors to regularly evaluate and validate the security of our service. High risks are identified, validated and remediated before production systems are made available. Medium risks are evaluated and resolved on a priority basis. |
|    | MAA      | All MAA core servers are behind firewalls; only systems administrators have access to the servers; all data is encrypted when transmitted between data centers. The MAA dashboard and API are protected with HTTPS/TLS encryption, and users are required to authenticate in order to access these.                                                                                                                                                                                                                         |
|    | CA Agile | We use a co-located data center provider and within that environment we have a dedicated cage to which only our Operations Team has access. We also monitor all traffic across our systems using HIDS (OSSEC) and NIDS (Snort) to notify of any suspicious activity.                                                                                                                                                                                                                                                        |
|    | ASM      | All ASM core servers are behind firewalls; only systems administrators have access to the servers; all data is encrypted when transmitted between data centers. The ASM dashboard and API are protected with HTTPS/TLS encryption, and users are required to use a username and password to login to their accounts.                                                                                                                                                                                                        |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Google     | <p>In this DPA the obligations of Google to hold all customer data as confidential and wholly owned by the customer is detailed.</p> <p>Google's internal data access processes and policies are designed to prevent unauthorized persons and/or systems from gaining access to systems used to process personal data. Google aims to design its systems to: (i) only allow authorized persons to access data they are authorized to access; and (ii) ensure that personal data cannot be read, copied, altered or removed without authorization during processing, use and after recording. The systems are designed to detect any inappropriate access. Google employs a centralized access management system to control personnel access to production servers, and only provides access to a limited number of authorized personnel. LDAP, Kerberos and a proprietary system utilizing RSA keys are designed to provide Google with secure and flexible access mechanisms. These mechanisms are designed to grant only approved access rights to site hosts, logs, data and configuration information. Google requires the use of unique user IDs, strong passwords; two factor authentication and carefully monitored access lists to minimize the potential for unauthorized account use. The granting or modification of access rights is based on: the authorized personnel's job responsibilities; job duty requirements necessary to perform authorized tasks; a need to know basis; and must be in accordance with Google's internal data access policies and training. Approvals are managed by workflow tools that maintain audit records of all changes. Access to systems is logged to create an audit trail for accountability. Where passwords are employed for authentication (e.g., login to workstations), password policies that follow at least industry standard practices are implemented. These standards include password expiry, restrictions on password reuse and sufficient password strength. For access to extremely sensitive information (e.g., credit card data), Google uses hardware tokens.</p> |

| Virtru     | Please see the Virtru Security Policies and Procedures and the Virtru Privacy Policies and Procedures provided in the Supplemental Information section of this response.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Salesforce | <p><b>Government Trusted Security and Infrastructure</b></p> <p>Salesforce understands that the confidentiality, integrity, and availability of our customers' information are vital to their business operations and our own success. We use a multi-layered approach to protect that key information, constantly monitoring and improving our application, systems, and processes to meet the growing demands and challenges of security.</p> <p>Independent audits confirm that our security goes far beyond what most companies have been able to achieve on their own. Using the latest firewall protection, intrusion detection systems, and TLS encryption, Salesforce Force.com gives you the peace of mind only a world-class security infrastructure can provide.</p> <p><b>Third-party validation</b></p> <p>Security is a multidimensional business imperative that demands consideration at multiple levels, from security for applications to physical facilities and network security. In addition to the latest technologies, world-class security requires ongoing adherence to best-practice policies. To ensure this adherence, we continually seek relevant third-party certification, including ISO 27001, the SysTrust audit (the recognized standard for system security), and SSAE 16 SOC 1 audit (an examination and assessment of internal corporate controls, previously known as SAS 70 Type II). SOC1, SOC2 and SOC3 audits are performed by third party auditor annually at a minimum. Additional audits and certifications include: CSA 'Consensus Assessments Initiative', JIPDC (Japan Privacy Seal), Tuv (Germany Privacy Mark), and TRUSTe.</p> <p>Protection at the application level</p>                                                                                                                                                                                                                                                                                                                                                                                                         |

|  | <p>Salesforce protects customer data by ensuring that only authorized users can access it. Administrators assign data security rules that determine which data users can access. Sharing models define company-wide defaults and data access based on a role hierarchy. All data is encrypted in transfer. All access is governed by strict password security policies. All passwords are stored in SHA 256 one-way hash format. Applications are continually monitored for security violation attempts.</p> <p>Protection at the facilities level<br/>Salesforce security standards are stringent and designed with demanding customers in mind, including the world's most security-conscious financial institutions. Authorized personnel must pass through five levels of biometric scanning to reach the Salesforce system cages. All buildings are completely anonymous, with bullet-resistant exterior walls and embassy-grade concrete posts and planters around the perimeter. All exterior entrances feature silent alarm systems that notify law enforcement in the event of suspicion or intrusion. Data is backed up to disk or tape. These backups provide a second level of physical protection. Neither disks nor tapes ever leave the data center.</p> <p>Protection at the network level<br/>Multilevel security products from leading security vendors and proven security practices ensure network security. To prevent malicious attacks through unmonitored ports, external firewalls allow only http and https traffic on ports 80 and 443, along with ICMP traffic. Switches ensure that the network complies with the RFC 1918 standard, and address translation technologies further enhance network security. IDS sensors protect all network segments. Internal software systems are protected by two-factor authentication, along with the extensive use of technology that controls points of entry. All networks are certified through third-party vulnerability assessment programs.</p> <p>Secure Data Centers<br/>Data centers provide only power, environmental controls, and physical security. Salesforce employees manage all other aspects of the service at the data centers. Colocation data center personnel do not have network or logon access to the Salesforce systems. Colocation personnel have physical access to the<br/>Salesforce secure server room in the event of an emergency, but do not have keys to the individual racks containing hardware. Data centers maintain a common baseline of physical and environmental controls across data centers.</p> <p>The exterior perimeter of each anonymous data center building is bullet resistant, has concrete vehicle barriers, closed-circuit television coverage, alarm systems, and manned 24/7 guard stations that together help defend against non-entrance attack points. Inside each building, multiple biometric scans and guards limit access through interior doors and to the Salesforce secure rooms at all times.</p> <p>Access to Salesforce's secure server rooms in the datacenter is authorized based on position or role. Additional access controls enforced by an electronic key box are implemented for the dedicated Salesforce Government Cloud racks to ensure that access is limited to Qualified U.S. Citizens. Salesforce has an established process to review data center access logs to the server room. Additionally, an at least annual assessment of the data center is performed to ensure the data centers are meeting Salesforce's security control requirements.</p> <p>In addition to securing the data center locations, it is critical that the data center facilities maintain robust critical infrastructure to support Salesforce through the following services:</p> |

| ServiceNow | <p>The ServiceNow cloud is built for the enterprise customer with every aspect aimed towards meeting the customer's demand for reliability, availability and security. ServiceNow's comprehensive approach to address this demand is enabled by the following: (a) ServiceNow's robust cloud infrastructure runs on its own applications and utilizes industry best-of-breed technology to automate mission critical functionalities in the cloud service with around-the-clock and around-the-world delivery; (b) ServiceNow achieves flexibility and control in its ability to deliver a stable user experience to the customer by having a logical single tenant architecture; (c) ServiceNow's application development which has a paramount focus on quality, security, and the user experience is closely connected to the operations of delivering those applications in a reliable and secure cloud environment; (d) ServiceNow invests in a comprehensive compliance strategy that allows its customers to attain their own compliance to applicable laws by obtaining attestations and certifications and running its subscription service from paired data centers situated close to where its customers are located; and (e) ServiceNow's homogeneous environment where all applications are on a single platform offers ServiceNow a competitive advantage in being able to concentrate its efforts to make the customer's user experience the best possible.</p> <p>The "Data Security Guide" contained within the "Subscription Service Guide" included with this response describes the measures ServiceNow takes to protect Customer Data when it resides in the ServiceNow cloud.</p> |

|              | <p>Penetration testing at least annually</p> <p>Security teams monitoring the infrastructure 24x7x365</p> <p>Any security issues discovered are reported in real time to information security staff and IT management, entered into our ticketing system for follow-up investigation, and tracked to resolution. All actions taken to resolve the problem are documented, allowing all problems to be tracked to completion.</p> <p>We provide application level memory separation between each client instance as well as data level segmentation and separation with each customer's data residing in its own schema and table space at the database tier. The database tier provides isolation and security of data, and the use of application clustering provides availability, reliability and scalability.</p> <p>Each customer's data is maintained in a separate database schema with its own discrete set of tables, facilitating a high degree of data isolation thus preventing potential for data segmentation breaches</p> <p>Flexibility to backup individual customer table spaces without affecting adjacent customers</p> <p>Each schema has separate authentication credentials and assigned resource profile to restrict access rights and resource consumption</p>                                                                                                                                                                                                                                                                                                               |
| VMware       | <p>The VMWare Approach to Compliance</p> <p>Many organizations have initiatives to virtualize their Information Technology (IT) infrastructure, or to move to a Cloud Computing model. However, these initiatives are often complicated by the increasing number of regulatory compliance requirements, which require protection of data such as PCI, HIPAA, FISMA, DIACAP, FedRAMP, GLBA, and other State and Federal requirements. Organizations are increasingly concerned with the complexity, risk, and impact that a new technology can bring to their existing environments.</p> <p>VMware addresses these challenges by establishing a Compliance Reference Architecture Framework (RAF) that provides a consistent method for VMware, its partners, and customers to assess and evaluate the impact of regulations on virtual and cloud environments. The intent of the RAF is to provide a single framework for VMware, its partners, and organizations to address a variety of compliance requirements across an IT infrastructure.</p> <p>We designed our security architecture using a defense-in-depth approach to implement multiple layers of security throughout the SaaS environment and to mitigate any potential attacks through multiple safeguards, including:</p> <ul style="list-style-type: none"> <li>• Access control mechanisms, firewalls, anti-virus/malware software, auditing mechanisms, network controls, maintaining defined configuration settings, etc.</li> </ul> <p>We perform regular internal scans to assess the vulnerability of our internal network.</p> |
| FireEye      | <p>All data is stored within locked and monitored cages in secure data centers. Customer data is restricted to a need to know basis. Data is logically tagged and virtually segregated in our cloud services. Access is managed and only given to those with need to know including internal employees and customers.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| VirtueStream | <p>All data for this environment will remain in the United States. Customers can elect Intel's TxT technology to demonstrate geo-fencing of data to specific data centers.</p> <p>Virtustream data centers are physically accessible by designated employees and approved employees only. Virtustream employees who are assigned to the data center are issued a proximity card which is required to access the data center. Once inside, physical access to the data processing areas is further restricted to specific employees. Physical access to the data processing areas is protected by biometric locks on the doors. Data center personnel maintain a list of all approved personnel who have access to the data center offices and who have access to the data processing areas.</p> <p>Virtustream offers security solutions which customers can select to protect their data while in transit and at rest. Customers are responsible for the protection of their data within their customer</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|  |                                                                                                                                                                                                                                                                                                                                                                 |

8.6.4 Offeror must describe its data confidentiality standards and practices that are in place to ensure data confidentiality. This must include not only prevention of exposure to unauthorized personnel, but also managing and reviewing access that administrators have to stored data. Include information on your hardware policies (laptops, mobile etc).

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                               |

| Salesforce | <p>Logical Access Control</p> <p>Salesforce provides contractual assurance to its customers that the data hosted in the Salesforce Services will be kept confidential and not accessed except under narrow circumstances (such as a support issue) and only for a set amount of time chosen by customer. In such circumstances, we will access your org only with prior approval and subject to a Non-Disclosure Agreement (NDA).</p> <p>To protect against access through the application, Salesforce employees don't have access at the application level for any customers, unless the customer grants access through the "login as" feature.</p> <p>Access to the production environment infrastructure is restricted to a very limited number of full-time Salesforce employees required to manage the service. Salesforce's Technical Operations team and Release Managers have logical access to servers. These employees must authenticate to the production environment via a secure server (Secure Global Desktop) using 2 points of RSA two-factor authentication. This tool provides pixel data only to these administrators. Systems access is role-based and controlled and logged. DBAs do not have login access to customer's instances (org) and do not see customer data in an assembled manner. They manage the system in aggregate-performance tuning, allocating space, building indices, etc. The Oracle tables and rows in our infrastructure do not reflect the view of a single customer instance (org) since we are multi-tenant and the data is spread across multiple disk arrays.</p> |                                                                                                                                                                                                                                                                                                                               |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|            | <p>Database administrator account activity is logged. These logs are sent to the security information and event management (SIEM) system. These database activities logs are reviewed for appropriateness by the Computer Security Incident Response Team (CSIRT) team on a regular basis. This log data is also available as a forensic audit trail to support CSIRT during incident investigations.</p> <p>A customer's instance (org) of Salesforce is an aggregate of the raw data. The data model is very complicated, normalized, and the rows are identified by base62 encoded keys (primary and foreign). Re-establishing data ownership and a business context for the data would be very difficult to do at the database level. In order to reassemble any given customer's application (org), someone would need access to our source code in order to reassemble the raw data in a manner that could be interpreted and understood, and would need the entire set of tapes or disks/arrays supporting a given Instance, as the data for any one customer is spread across several tapes/disks. Data center engineers with physical access to the servers do not have logical access to the production environment and administrators with logical access to the systems do not have physical access to the data centers.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| ServiceNow | <p>ServiceNow applies the same data classification for all hosted customer data. ServiceNow does not inspect or monitor its customers' information and therefore has no ability to sub-classify customer data. The overriding requirement of the assigned classification is that customer data remains hosted in the private cloud until the customer terminates their subscription. It is never stored anywhere apart from the private cloud.</p> <p>Customers remain the data owner and data controller for all data placed into their instance. ServiceNow does not examine, inspect, monitor or analyze customers' data.</p> <p>Customers apply access controls to restrict access to data within their instances based on their own requirements and needs, including their own data classification.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Logical access management reports are rolled up monthly and are part of the monthly Privacy &amp; Security board review. All logical access management is subject to review and audit under ISAE 3402 assurance every six months and annually under PCI DSS certification.</p> <p>Wireless technology is not allowed within the production operations infrastructure where customer data is received, processed and stored.</p> <p>All corporate laptops are whole disk encrypted. All approved portable devices are encrypted and have a phone home capability which allows them to be wiped remotely.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|  | Fieldglass | <p>Fieldglass has the following categories for classifying information:</p> <p>Confidential - This is the information that Fieldglass and end users have a legal, regulatory and/or contractual obligation to protect or information that unauthorized disclosure, compromise, or destruction that results in severe damage, provides significant advantage to a competitor, or incurs serious financial impact to Fieldglass and/or our customers. Fieldglass will not disclose to a third party without signing a nondisclosure agreement requiring the third party to protect such information.</p> <p>Internal Use - This is information that, due to a technical or business sensitivity, requires special precautions to ensure the confidentiality and integrity of data by protecting it from unauthorized access, modification or deletion. This information is intended for use only within the company and must be limited to end users who are employed by Fieldglass or individuals that have a business requirement to access the data and have signed a non-disclosure agreement.</p> <p>Public - This information has been made available for public distribution through authorized company channels. Public information does not require special protection. It is information that can be disclosed to anyone without violating an individual's right of privacy. Knowledge of this information does not expose Fieldglass to financial loss, embarrassment, or jeopardize the security assets.</p> <p>Laptops<br/>Every Fieldglass laptop issued to employees and contractors have a DLP agent installed that cannot be modified. This agent detects whether customer data or the Fieldglass source code is being copied externally. Monthly access reviews are conducted by product and file share owners to ensure access is limited to a need-to-know basis. Privileged user account access is also monitored on a weekly basis.</p> |

Similar data protection agreements were executed with all subprocessors. Personal data must be classified as equally confidential regardless of whether it relates to employees, customers or third parties.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|        | Hybris         | <p>The security infrastructure includes firewall security and hardened security policies on all servers. Log management procedures are in-place for log review for firewall, applications, network devices, including file-integrity management. SAP Hybris utilizes technologies from leading security firms for Log Management and File Integrity Management. SAP Hybris employs two-factor authentication across its network. SAP Hybris undergoes vulnerability and penetration testing. SAP Hybris validates against requirements for PCI DSS 2.0.</p> <p>The infrastructure also includes Web Application Firewalls and DDoS Mitigation Services.</p> <p>In addition, security policies and change management policies are in-place ensuring that all access and changes to customer systems and information is accessible only by SAP Hybris staff with access authorization.</p> <p>Security of the software application which is controlled by the Customer (or its implementation partner) remains the responsibility of the Customer.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|        | SuccessFactors | <p>We are aligned with ISO 27001 for Information Security, BS 10012 for Data Protection, and ISO 20000 for Service Delivery to create an Integrated Compliance Framework ("ICF"). Where these standards overlap in subject matter, Information Security ISO 27001 takes precedence. Our Network also complies with Authority to Operate as a Moderate Risk Federal Information System by the Office of Personnel Management and Department of Homeland Security; NIST SP800-53 Security Controls; EU Privacy Directive 95/46/EC for EU and non-EU customer data; Payment Card Industry (PCI) Data Security Standard (DSS) v 2.0; Safe Harbor.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| VMware |                | <p>VMware monitors for security events involving the underlying infrastructure servers, storage, networks, and information systems used in the delivery of vCloud Air over which VMware have sole administrative level control. The goal of this process is to identify security incidents and respond to them proactively.</p> <p>This responsibility stops at any point where customers have control, permission, or access to modify any aspect of the service offering. The customer is responsible for the security of the networks over which they have administrative level control. This includes, but is not limited to, maintaining effective firewall rules, exposing communication ports that are only necessary to conduct business, locking down promiscuous access, and other such capabilities.</p> <p>Proactive Security Monitoring over Internet and Social Media (e.g. searching filesharing sites for customer data, seeding data with honey tokens) VMware security teams perform OSINT monitoring on the Internet for all VMware products and services. This includes harvesting data from search engines, le sharing, and social networking sites. This data is analyzed for keywords and other specific indicators.</p> <p>With regards to potential data leaks, the customer is solely responsible for protecting the security of his or her content, including any access provided to employees, customers or third parties.</p> <p>vCloud Air provides certain software and functionality to help protect content from unauthorized access such as firewalls, load balancers, and IPsec VPNs. Customers are encouraged to deploy additional security mechanisms similar to what exists in their current data center to address other security controls such as data encryption, intrusion detection, le integrity monitoring, and other such concerns relevant to the sector and regulatory requirements that apply to the specific business of a customer.</p> |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| FireEye      | <p>FireEye has mature and well documented security and privacy programs. The programs include third party certifications for SSAE 16 SOC 2, and FedRAMP certifications, Model clauses, Privacy and Security Standards among others. The data that FireEye receives is only in conjunction with the malware analysis.</p> <p>Our data protection standards includes prevention of exposure to unauthorized personnel and managing and reviewing all access to systems (not just for admin) quarterly or when employees have a role change. FireEye has standards for hardware and software such as gold images for all operating systems and hardened systems, these are managed and distributed centrally. It also includes supported and managed configurations of hardware and software on mobile devices and acceptable use policy for all FireEye resources.</p>                                                                                                                                                                                                                                                                                                                     |
| VirtueStream | <p>Customers are responsible for the protection and confidentiality of data within their application and/or system which resides on the Virtustream IaaS. Virtustream customers are logically separated via VLAN and VRF technologies which ensure that different customers' data is not accessible and cannot be altered. Customers are responsible for controlling access to their data. Virtustream does not have direct access to customer data within their customer zone. Virtustream employees who are assigned to IaaS must pass a Virtustream background investigation. In addition, Virtustream employees assigned to the IAAS must adhere to any requirement by customers to pass federal, state, or local background investigations if they are to provide managed services to the customer zone.</p> <p>Virtustream offers an encryption at rest and encryption in transit managed service. This provides an additional level of protection for customer's data within their VLAN,</p> <p>All Virtustream employees with access to the IaaS are required to have hard drive encryption on their laptops. Virtustream performs quarterly privileged user access reviews.</p> |

8.6.5 Offeror must provide a detailed list of the third-party attestations, reports, security credentials (e.g., FedRamp), and certifications relating to data security, integrity, and other controls.

FedRAMP is a government-wide program that provides a standardized approach to security assessment, authorization, and continuous monitoring for cloud products and services. This approach uses a "do once, use many times" framework that can reduce government organizations' costs, time, and staff required to conduct redundant agency security assessments. U.S. government agencies can now leverage vCloud Government Service to meet the stringent security and privacy requirements of FedRAMP.</p> |
| FireEye      | <p>We have SSAE 16 SOC 2 Type 2 certification for specific cloud services, and associated datacenters. FireEye currently has a FedRAMP ATO for ETP and are in process for full FedRAMP, and ISO 27001 certification.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| VirtueStream | <p>Security is the foundation of our business. Virtustream's xStream™ cloud software assists our customers to meet mandatory Legislative requirements, and achieve and maintain FedRAMP, FISMA Moderate, PCI-DSS, SSAE16/SOC2/SOC3, ISO 27001/9001/22301, HIPAA, NIST 800-53, CSA STAR and other leading cloud certifications and compliance frameworks in the customer's own environment (when coupled with identified operational and management controls).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

8.6.6 Offeror must describe its logging process including the types of services and devices logged; the event types logged; and the information fields. You should include detailed response on how you plan to maintain security certifications.

| CA         | APM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | CA has various log monitoring tools that help us keep track of live production systems in order to understand load vs. resource utilization vs. performance. CA along with AWS monitors the service and provides real time alerting when systems suddenly die, or when system loads or response times approach critical thresholds. Logs are kept for forensic examination and identification of trends in order to proactively ensure stability. |

|  | <p>organization's applications and data, which in turn can be a critical tool in diagnosing potential or real security issues. Auditing features include:</p> <p>Record Modification Fields - All objects include fields to store the name of the user who created the record and who last modified the record. This provides some basic auditing information.</p> <p>Login History - You can review a list of successful and failed login attempts to your organization for the past six months within Salesforce.</p> <p>Field History Tracking - You can also enable auditing for individual fields, which will automatically track any changes in the values of selected fields. Although auditing is available for all custom objects, only some standard objects allow field-level auditing.</p> <p>Setup Audit Trail - Administrators can also view a Setup Audit Trail for the past six months within Salesforce, which logs when modifications are made to your organization's configuration. This trail can be downloaded into Excel or as a csv file.</p> <p>While the Login History and Setup Audit Trail are available for six months within Salesforce, audit trails can be downloaded and stored locally to meet longer audit log retention requirements.</p> <p>Detailed application logs can be used for forensics investigations by customers. These logs are stored for 12 months and are available for a fee.</p> <p>Event Monitoring (Additional License Option)</p> <p>In addition to Salesforce's core auditing capabilities, Salesforce also offers Event Monitoring as an additional license option. Your Agency can use event monitoring to discover how often and at what times your users are logging in to and out of your organization. This includes insight into what Salesforce applications are being adopted by users, who is logging in and from where, what pages users are viewing, what reports users are running and exporting and other aspects of application usage. This capability helps you discriminate between valid and invalid login requests and also track user login patterns for future reference. Not only can your Agency now better understand how your apps are being utilized, you can also monitor if users download large amounts of data that might put your agency at risk. In addition, your Agency can also determine if an employee is unnecessarily downloading sensitive customer/citizen information, pinpointing the exact time and location of that event. Event Monitoring is delivered as an API-first feature and there are Salesforce partners with visualization tools available.</p> <p>Use the SOAP API and REST API resources to retrieve event log files that contain information useful for assessing organizational usage trends and user behavior. Because event log files are accessed through the Force.com SOAP API and REST API, you can integrate log data with your own back-end storage and data marts so that you can correlate data from multiple organizations and across disparate systems easily. When using event monitoring, keep the following in mind:</p> <ul style="list-style-type: none"> <li>- In the unlikely case where no log files are generated for 24 hours, contact Salesforce.</li> <li>- Log data is read-only. You can't insert, update, or delete log data.</li> <li>- Use the EventType field to determine which files were generated for your organization</li> <li>- LogDate tracks usage activity for a 24-hour period, from 12:00 a.m. to 11:59 p.m. UTC time.</li> <li>- An event generates log data in real time. However, log files are generated the day after an event takes place, during nonpeak hours. Therefore, log file data is unavailable for at least one day after an event.</li> <li>- CreatedDate tracks when the log file was generated.</li> </ul> |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <ul style="list-style-type: none"> <li>- Log files, represented by the EventType field, are only generated if there is at least one event of that type for the day. If no events took place, the file won't be generated for that day</li> <li>- Log files are available based on CreatedDate for the last 30 days when organizations purchase User Event Monitoring or one day for Developer Edition organizations.</li> </ul> <p>Businesses desire certainty that their data is accurate, complete and reliable, enabling them to meet stringent industry regulations. With Field Audit Trail, customers can track changes at the field level for up to ten years and set different policies for each Salesforce object to ensure data is purged when no longer needed. Life sciences companies running clinical trials in Salesforce, for example, can now maintain a complete audit trail of patient data so they can safeguard the integrity of clinical trial results and comply with FDA regulations.</p> <ul style="list-style-type: none"> <li>- All event monitoring logs are exposed to the API through the EventLogFile object, however there is no access through the user interface.</li> </ul> <p>Event monitoring can be used with 28 different file types:<br/>Apex Callout, Apex Execution, Apex SOAP, Apex Trigger, API, Async Report, Bulk API, Change Set Operation, Content Distribution, Content Document Link, Content Transfer, Dashboard, Document Attachment Downloads, Login, Login As, Logout, MDAPI Operation, Multiblock Report, Package Install, Report, Report Export, REST API, Salesforce1, Adoption (UI Tracking), Sandbox, Sites, Time-Based Workflow, URI, Visualforce.</p> <p>Event Monitoring Transaction Security<br/>Transaction Security policies give your Agency a way to look through events in your organization and specify actions to take when certain combinations occur. A transaction security policy consists of events, notifications, and actions. Transaction Security monitors events according to the policies that your Agency sets up. When a policy is triggered, you can receive a notification and have an optional action taken.</p> <p>For example, suppose that you activate a policy to limit the number of concurrent sessions per user to three. A user with three login sessions tries to create a fourth session. Your Agency can require a user to end one of their existing sessions before proceeding with the new session. At the same time, you are notified that the policy was triggered.</p> |
| ServiceNow | <p>The ServiceNow application writes detailed log information that is stored in tables within a customer's instance. As this is customer data in a customer's instance, ServiceNow does not attempt to monitor or view this data unless specifically requested by a customer. As a result the customer is responsible for monitoring the contents of these logs files. The log data is protected in the same manner as all other customer data. Event logs can also be configured to feed into a customer's environment via ServiceNow's Syslog probe allowing the logs to be stored within the customer's environment in a syslog repository or SIEM and retained according to the customer's requirements.</p> <p>ServiceNow's application logging includes verbose transaction logs, these logs are retained within the instance for 30 days. Event logs are stored for seven days and audit histories are retained indefinitely in the instance.</p> <p>Transaction logs represent every click, view, and system event that occurs in an instance and as a result, will grow very large, quickly. They provide a level of detail that is frequently used for troubleshooting issues with an instance. They can also provide detailed intelligence on the behaviors within an instance. These logs can be downloaded to customers' environments, if they need to be retained for longer than 30 days.</p> <p>The event logs on the other hand are less granular; they will include the creation of an incident, or deletion of problem, or any one of the 250 standard events. They may also contain customer</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|         | <p>created events. There are a number of security events as well, including successful login, failed login, security privilege escalation, and viewing of a table. These events can either be monitored manually, generate an Incident based on a parameter or when metric is reached; such as failed logins per minute.</p> <p>The final aspect of logging is the audit history. Audit history may be turned on for any particular table or field. The audit log table then maintains a record of who made changes when to a table or field and what they changed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| QTS     | <p>All account activities are logged including account creation, modification, disabling and termination. Logs are monitored and notifications are sent for abnormal activity. Splunk Enterprise is used as the centralized audit log monitoring tool to centrally collect, analyze and reduce the amount of audit logs.</p> <p>As referenced in IT_PRO_07_Audit_and_Accountability_Procedure (v1.0 – 1/20/14), on-site network and security operations monitoring coverage and audit management process; to include analysis, reporting, and alerting into a central repository provided by a highly available Splunk logging service. Splunk logging service supports QTS cloud information systems for organizational-wide situation awareness. Splunk provides built-in capabilities to filter, normalize, and correlate the large amounts of data produced by QTS cloud, and then allows QTS's support staff to use Splunk's built-in capabilities to data mine, log mine, and run pre-developed and ad-hoc reports against the result sets obtained during the data and log mining sessions. Logs are centrally correlated and reviewed from devices across QTS cloud Hosting Environment by QTS's Systems Engineer or designee.</p> <p>Specific report categories include:</p> <ul style="list-style-type: none"> <li>•Authentication and Authorization Reports</li> <li>•Systems and Data Change Reports</li> <li>•Network Activity Reports</li> <li>•Resource Access Reports</li> <li>•Malware Activity Reports</li> <li>•Failure and Critical Error Reports</li> <li>•Vulnerability Correlations Reports</li> <li>•Anti-Port Correlations Reports</li> <li>•Watch List Correlations Reports</li> </ul> |
| VMware  | <p>VMware IaaS Services</p> <p>In accordance with our ISO and SOC commitments, change-related activity, including administrative actions, performed on the management infrastructure layers supporting vCloud Air are monitored and logged to a centralized logging server for a minimum of 1 year. Infrastructure logging is in place for customer interactions with the vCloud Air management and administrative consoles. These logs are only for the management and administrative interfaces.</p> <p>These are not in place for monitoring of individual customer VMs installed within the customer tenant org. Limited logging and activity reporting are available from customer tenant environments, with more detailed reporting, auditing and logging capabilities introduced Q4-2014.</p> <p>VMware AirWatch</p> <p>To enable user accountability, we have full auditing capabilities on all environments in the AirWatch Cloud. Customers can use the built-in event log, customizable dashboards, integrated reporting engine and AirWatch Hub to audit the web console and end-user actions.</p> <p>For the SaaS environment logs, our Information Security Team helps ensure that systems generate audit records containing information that establishes what type of event occurred, when the event occurred, where the event occurred, the source of the event, the outcome of the event, and the identity of any individuals or subjects associated with the event.</p>                                                                                                                                                                                                                        |
| FireEye | <p>FireEye auditing and log review procedures are based on industry best practices and in accordance with regulatory, statutory, contractual and business requirements. Detailed audit</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|              |                                                                                                                                                                                                       |

There are a number of pre-defined roles for both Internal and External users that inherit functionality in a hierarchical manner. Portal has RBAC built in that allows you to grant access to different functionality for different users. For example, you can assign a user to role that only allows them access to update content, or access apps but not create them. |
|            | MAA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | CA utilizes IaaS vendor to host the service with strict access controls in place. CA SaaS InfoSec team manages users and their associations with groups within LDAP Directory and conducts periodic access reviews to conform to governance requirements.                                                                                                                                                                                                                                                 |
|            | CA Agile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Our databases are shared but logically segregated. We ensure logical security of access to customer data by implementing access restrictions between subscriptions and roles within those subscriptions to assure adequate segregation of data. There is a plugin available in the unlimited edition that allows the administrator to limit access to the application based on IP address.                                                                                                                |
|            | ASM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Only Public Status Page (PSP) data is stored in the cloud, and PSP web pages are accessible by anyone. PSP data is only sent to the cloud if the customer enables this feature, and they can decide which data is made public.                                                                                                                                                                                                                                                                            |
| Google     | If Google becomes aware of a Data Incident, Google will promptly notify Customer of the Data Incident, and take reasonable steps to minimize harm and secure Customer Data. Notification(s) of any Data Incident(s) will be delivered to the Notification Email Address provided by Customer in connection with the Agreement or, at Google's discretion, by direct communication (e.g., by phone call or an in-person meeting). Customer acknowledges that it is solely responsible for ensuring the contact information given for purposes of the Notification Email Address is current and valid, and for fulfilling any third party notification obligations. Customer agrees that "Data Incidents" do not include: (i) unsuccessful access attempts or similar events that do not compromise the security or privacy of Customer Data, including pings, port scans, denial of service attacks and other network attacks on firewalls or networked systems; or (ii) accidental loss or disclosure of Customer Data caused by Customer's use of the Services or Customer's loss of account authentication credentials. Google's obligation to report or respond to a Data Incident under this Section will not be construed as an acknowledgement by Google of any fault or liability with respect to the Data Incident. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| AODocs     | The AODocs-specific data stored in the Google App Engine Datastore relies on a built-in multi-tenancy feature named "namespace", which define virtual "silos" within the AODocs database. Each customer is assigned a specific namespace (which is in fact the customer's primary Google Apps domain name), and all the customer's data is stored within this namespace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Virtru     | Key material is encrypted prior to storage, and those keys are backed by HSM. Decryption occurs only for authenticated users                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Salesforce | The multitenant architecture and secure logical controls address separation of customer data. There are no dedicated servers used for individual customers. The Salesforce Services infrastructure is divided into a modular architecture based on "Instance". Each Instance is capable                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|            | of supporting several thousand customers in a secure and efficient manner. Services are grouped within each Instance; with app, search, and database elements contained. There are appropriate controls in place to ensure that any given customer's org (application) is not compromised. The service has been designed to accomplish this and is robustly tested on an ongoing basis by both Salesforce and its customers.                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| ServiceNow | <p>ServiceNow includes built in Role Based Access Control (RBAC) that is based on users, groups and roles. The entitlements granted to users are built from fine grained Access Control Lists (ACLs).</p> <p>ACLs can be built from individual entitlements that include read, write, create, execute and delete as well as a number of other individual attributes. The attributes that are available also vary, depending on the type of object being secured.</p> <p>Customers have full control of the entitlements granted to each of their users and integration with customer side directory service is possible through the use of users, groups and group memberships.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|        | <p>change, the date of the change and the ability to see the data as it existed at that point in time. The data in the audit log can be viewed with appropriate permissions.</p> <p>We also provide an optional Audit Framework for additional audit logging capabilities. All audit logs within the application are accessible only by customers. Therefore, the review of application audit logs as well as retention periods for the application audit logs are the customer's responsibility, and can be determined as per requirements.</p> <p>To detect unauthorized information processing activities, systems are monitored and all information security events are recorded. Operator logs and fault logging are used to information system problems are identified. We comply with all relevant legal requirements applicable to its monitoring and logging activities. All system logs are created with "write-once" technology so that they cannot be altered or overwritten. All system logs are maintained for a minimum of 90 days on-line and a minimum of 13 months near-line.</p> <p>Inter host communications are secured by multiple layers of defense including segmented separate VLANS, restricted protocol sharing, multiple levels of stateful firewalls, HOST and NETWORK IDS/IPS and constant vigilant monitoring and testing.</p> <p>In addition, our Operations Team maintains detailed system logs. Our internal system logs successful and unsuccessful requests for access, and our team monitors all system logs for any errors or unusual activity. Activities are logged and reviewed by various mechanisms such as: RSA, SysLog, NIDS, HIDS, OSSIM and database logging.</p> <p>The system logs are not made available to customers but are used to monitor the health of the application and facilitate a high level of performance. Alerts are responded to immediately and logs are analyzed daily for any issues or anomalies. The system level logs are written to servers in the data center then copied to our operations team on an as needed basis.</p> <p>Various logging mechanisms are used to monitor database administration activities. Logging mechanisms include: syslog, alert log and database auditing for the privileged role SYSDBA.</p> <p>All activities are logged under the SYSDBA role which including: start-up and shutdown of the data base, configuration changes to init.ora and also any queries/data extraction. We would be able to identify dba activities by manual review of the logs and database auditing to detect if client data querying has occurred.</p> <p>All audit logs are created with "write-once" technology so that they cannot be altered or overwritten.</p> <p>Controls aim to protect against unauthorized changes and operational problems with the logging facility including:</p> <ul style="list-style-type: none"> <li>Alterations to the message types that are recorded.</li> <li>Log files being edited or deleted.</li> <li>Storage capacity of the log file media being exceeded, resulting in either the failure to record events or over-writing of past recorded events.</li> </ul> |
| VMware | <p>The vCloud Air Terms of Service and Data Privacy Addendum's establish the line of demarcation between the responsibility of VMware and the customer as it pertains to data protection. In addition, security whitepapers are made available to customers to further illustrate these points or to establish transparency regarding the separation of responsibility between VMware and the customer for compliance programs such as HIPAA or PCI.</p> <p>Subscribers are able to use a VPN connection at multiple layers to maintain data security. For traffic in motion, VPNs can be created for a particular application and also for an entire virtual data</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|              | <p>center. A site-to-site IPsec-VPN can also be established to securely tunnel the entire virtual data center back to the private data center. For data ""at rest"", subscribers are provided a role-based access control, whereby specified users are not exposed to the entire infrastructure and can be limited to a single or multiple virtual data centers.</p> <p>Further details of the controls in place to limit exposure of these groups to customer data is documented within the ATA 101 and SOC reports, available under NDA.</p> <p>vCloud Air has logically separated networks that restrict Tenant access to only their own private networks. The vCloud Hybrid Service has two offerings: The Dedicated Cloud option provides physically isolated and reserved compute resources from all other vCloud Hybrid Service tenants, as well as a private cloud instance. The Virtual Private Cloud option has a multitenant compute resource mode. Both services have logically isolated networking and storage that ensures secure resource separation. Customers have complete control over the file systems and databases they deploy within the service.</p> <p>Access is technologically enforced and employees are only authorized the level of access to information assets that is required to meet an approved business need or perform prescribed job responsibilities.</p> <ul style="list-style-type: none"> <li>• Administrative access is limited to only those users that explicitly require privileged access.</li> </ul> <p>Customers do not have direct access to the SaaS environment; rather, customers administer the solution via the Web console.</p> |
| FireEye      | Each of the FireEye offerings include strong access controls including role-based access. Only properly authorized individuals on a need to know basis are granted access to data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| VirtueStream | Virtustream does not have access to customer hosted data. Customers control access to their application or system which sits upon the IaaS. Customer would need to create the user in their own Active Directory to allow access by named users of Virtustream for specific system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

8.6.8 Offeror must describe its notification process in the event of a security incident, including relating to timing, incident levels. Offeror should take into consideration that Purchasing Entities may have different notification requirements based on applicable laws and the categorization type of the data being processed or stored.

|        |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| CA     | APM      | CA Technologies documents a plan and associated procedures in case of an information security incident. The incident response plan clearly articulates the responsibilities of personnel and identifies relevant parties for notification. All security incidents will be investigated and triaged to understand where the vulnerability exists. Software vulnerabilities will be investigated by CA engineering teams; other vulnerabilities will be addressed by the SaaS Ops team in conjunction with AWS. Affected customers will be notified and given a remediation plan |
|        | MAA      | Clients are notified via email of any security incident that resulted in a data breach for that client promptly and no later than 5 days. A root cause analysis is then sent within 30 days. Meeting can be setup upon request.                                                                                                                                                                                                                                                                                                                                                |
|        | CA Agile | We have a defined Incident Handling Guide which outlines the process and responsibilities during breach investigation. Clients are notified via email of any security incident that resulted in a data breach for that client promptly and no later than 5 days. A root cause analysis is then sent within 30 days. Meeting can be setup upon request.                                                                                                                                                                                                                         |
|        | ASM      | Clients are notified via email of any security incident that resulted in a data breach for that client promptly and no later than 5 days. A root cause analysis is then sent within 30 days. Meeting can be setup upon request.                                                                                                                                                                                                                                                                                                                                                |
| Google |          | Google's focus on security and protection of data is among our primary design criteria. Google data center physical security features a layered security model, including safeguards like custom-                                                                                                                                                                                                                                                                                                                                                                              |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|            | <p>designed electronic access cards, alarms, vehicle access barriers, perimeter fencing, metal detectors, and biometrics, and the data center floor features laser beam intrusion detection. Our data centers are monitored 24/7 by high-resolution interior and exterior cameras that can detect and track intruders. Access logs, activity records, and camera footage are available in case an incident occurs. Data centers are also routinely patrolled by experienced security guards who have undergone rigorous background checks and training. As you get closer to the data center floor, security measures also increase. Access to the data center floor is only possible via a security corridor which implements multifactor access control using security badges and biometrics. Only approved employees with specific roles may enter. Less than one percent of Googlers will ever step foot in one of our data centers.</p> <p>Google operates a global, multi-tenant environment running the world's second largest IP data network providing customers with a low latency, high performing platform that runs 24x7.</p> <p>Hard Disks are assets that are tracked throughout its lifecycle at Google from arrival to final destruction. These disks are component parts that Google uses to build its own servers from other component parts including motherboards and a harden, highly customized version of Linux.</p> <p>Google uses a proprietary storage and processing mechanism that isolates processing of data in chrooted jails within a physical server. Access permissions restrict the ability for processes to interact between jails. In addition, tenant data is striped in chunks across many different drives with each chunk having its own access control list. This helps ensure that data is logically isolated between customers in storage and during processing.</p> <p>In addition to the inherent processing and storage mechanisms described above, Google's security controls including least privilege rights, logging and auditing have been implemented consistent with FedRAMP requirements</p> |
| AODocs     | <p>Altirnao can use multiple notification channels to communicate incident updates to its customers: the AODocs status page (<a href="https://status.aodocs.com">https://status.aodocs.com</a>) provide status updates on all the AODocs services the AODocs customer mailing list, which can be used to send emails to the technical contacts of all AODocs customers the AODocs support platform, i.e. ZenDesk, which can be used to communicate with specific customers who have opened tickets.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Salesforce | <p><b>Incident Response</b></p> <p>If negotiated into a final contract, Salesforce can promptly notify the Customer in the event Salesforce becomes aware of an actual or reasonably suspected unauthorized disclosure of Customer Data. Notification may include phone contact by Salesforce support, email to customer's administrator and Security Contact (if submitted by customer), and public posting on <a href="https://trust.salesforce.com">trust.salesforce.com</a>.</p> <p>Salesforce maintains an Incident Response Plan and has an established Security Incident Response Process. During a security incident, the process guides Salesforce personnel in management, communication, and resolution activities. Government customers can report security incidents related to their Salesforce products and offerings via <a href="mailto:security_gov@salesforce.com">security_gov@salesforce.com</a>. Salesforce will respond in accordance with the incident response process described above.</p> <p>Our incident response plan/process was created in accordance with FedRAMP moderate control requirements which include incident response requirements derived from NIST SP 800-53, NIST SP 800-61, and the FedRAMP Incident Communications Procedure.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| ServiceNow | <p>Unless notification is delayed by the actions or demands of a law enforcement agency, ServiceNow shall report to Customer the unauthorized acquisition, access, use, disclosure or destruction of Customer Data (a "Breach") promptly following determination by ServiceNow that a Breach occurred. The initial report shall be made to Customer security contact(s) designated in</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                  |

All of our security processes and procedures are audited by a third party every six months for ISAE 3402 assurance. We also hold PCI DSS certification. The</p> |

|  |            | <p>intent of the following is to describe in a broad manner the actions we take in regard to security incidents, their management, tracking and communications in regard to internal policies and procedures. We have an established security incident plan based on internally-developed policies and procedures where documented results of all security incidents occurring during the six month audit period are reviewed and evaluated against the Trust Services Principles of ISAE 3402 and the PCI DSS standards as appropriate. Upon notification of a security incident, a documentation trail is begun by the InfoSec department and an internal ticket is created as the record of reference. The lead security manager calls a meeting including all personnel required to contain and reduce risk and impact appropriate to the nature of the incident. Tasks are assigned with milestones to be met to validate and determine extent of the incident. Communication is made to the Privacy &amp; Security Board to alert principal membership and foster internal cooperation and awareness. An appropriate communication channel to affected customer(s) is determined based on how we were notified of the incident, i.e. from a customer, from an internal report or from a third party report. Communication is made to affected customer(s) to include the nature of the incident, actions taken to contain the incident and potential effects of actions if any, in regard to sustained business process and availability of the system. Any workarounds or hot fixes necessary in the solutions are communicated and scheduled reporting to the customer(s) is established with an identified single point of contact within our company. Based on the nature of the incident, if required, legal counsel present at initial risk &amp; impact meeting, will assist in communicating with law enforcement contacts. The customer is kept informed of the milestones met and at scheduled intervals until the incident is fully contained and no further risk and impact perceived. All incidents are required to be internally managed by InfoSec to include tracking and review on a weekly basis and evaluation of the actions taken in regard to our security concept. All incident reports are presented to and reviewed by the Privacy &amp; Security Board and are formally closed with discussion and evaluation to determine what actions can be taken to prevent similar incidents. Depending on the nature of the incident and impact to customer(s), security incidents are not formally closed by the board until all affected customers are made aware of the incident and appropriate measures to remediate the initial threat are formally communicated.</p> |
|  | Fieldglass | <p>Fieldglass' security team is responsible for managing security incidents and all communication is conducted via the respective account managers to ensure timeliness. The process is defined within the Incident Response Management Standard.</p> <p>Customers are notified of an incident within 48 hours.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|  | Hanna      | <p>SAP will notify via defined communication channels within 36 hours of a confirmed data security breaches to the affected customers. The report will detail the following information:</p> <ul style="list-style-type: none"> <li>• Details relating to the security incident that has occurred, known at the time of notification.</li> <li>• IT infrastructure and/or application affected by the security incident.</li> <li>• Overview of the performed mitigation actions to restore the security, documented within the incident report form.</li> <li>• All further applicable requirements by country regulations "on obligation to notify" will be met.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

Furthermore, hybris follows its information security incident management policy as well as Visa's standard process for responding to a breach. The policy includes procedures such as disclosure of sensitive information, disclosure of system vulnerability, public release of vulnerability information, system vulnerability exploitation as well as incident reporting, contacting of law enforcement and forensic investigation.                                                                                                                                                                                                                                                                                          |
|              | SuccessFactors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | We have a comprehensive and approved Incident Management Policy and process. Upon the occurrence of a security incident, initial communication is distributed to the appropriate individuals and an escalation process is followed. Upon becoming aware of the incident, measures are promptly taken by the team to resolve the situation.<br>All affected customers should be informed within at most 36 hours of confirming a potential breach in the privacy of their data. Following incident resolution, follow-up is required to ensure that the incident has been resolved effectively and that the threat is no longer present.<br>We are aligned with ISO 27k standards for event and incident management and have formal incident management policies and processes in place. These policies and procedures are tested in the ISO 27k and SOC 2 audits. |
| VMware       | <p>VMware IaaS Services</p> <p>If VMware determines that there has been unauthorized access to, or use or disclosure of, Your Content, or other incident VMware will use commercially reasonable efforts to notify You, taking into account any applicable law, regulation, or governmental request.</p> <p>VMware will provide security incident response (e.g., detection, severity/threat classification, forensics, and resolution) pertaining to management infrastructure over which VMware has direct, administrative, and/or physical access and control, such as the vCloud Hybrid Service servers, storage, applications, and network devices.</p> <p>Documented escalation procedures and a ticketing system are in place to guide employees in identifying, reporting, and responding to system availability issues and related security incidents. This includes an incident response policy to determine severity of an incident and a breach notification process.</p> <p>All alerting and monitoring at the guest OS/VM level is the responsibility of the customer.</p> <p>In the event of a data breach customers will be notified by VMware vCloud Air Global Support Services via their preferred contact means. VMware will provide security incident response (e.g., detection, severity/threat classification, forensics, and resolution) pertaining to management infrastructure over which VMware has direct, administrative, and/or physical access and control, such as the vCloud Air service servers, storage, applications, and network devices.</p> <p>Notification timeframes are agreed upon between VMware and the customer in standard agreements and contracts. Incidents are handled on a case-by-case basis, but typically occur between 24-48 hours after a breach has been confirmed.</p> <p>VMware will provide security incident response (e.g., detection, severity/threat classification, forensics, and resolution) pertaining to management infrastructure over which VMware has direct, administrative, and/or physical access and control, such as the vCloud Air service servers, storage, applications, and network devices.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| FireEye      | FireEye has a developed documented process for reporting client notification for regulatory, legal and contractual issues once a breach has been confirmed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| VirtueStream | <p>VirtueStream shall contact customers in accordance with Service Level Agreements (SLA) and contractual obligations.</p> <p>There are two primary Incident types; Security Incidents, where there is a possible breach in systems or data integrity, and Services, where there is an impacted or affected service. Although there is some overlap, generally any security-related incident should be classified as a Security</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|  | <p>Incident and the response must be managed using the 'Virtustream Information Security Procedure – Security Incident Response Plan'.</p> <p>The purpose of this security incident response plan is to provide general guidance to Virtustream staff- both technical and managerial – to enable quick and efficient recovery from security incidents; respond in a systematic manner to incidents and carry out all necessary steps to correctly handle an incident; prevent or minimize disruption of critical computing services; and minimize loss or theft of sensitive or mission critical information including sensitive credit card data. The plan is also a guide to sharing information with other stakeholder organizations who might be impacted by such security incidents such as the credit card associations and law enforcement.</p> <p>The Security Incident Response Plan (SIRP) provides guidance to prepare for, respond to, and recover from potential incidents. Policy statements surrounding the IR-Plan are provided to ensure continued upkeep and standardized use. The SIRP guidance at the procedural level defines the roles, responsibilities, communication methods and flows, contact information, types of potential incidents, and immediate actions that are to be taken upon an incident's identification, and elaborates with subsequent recovery steps. Virtustream's Incident Response Policy requires the implementation and testing of a generalized plan that adheres to the International Standards Organization 27002 guidance for incident management and response, but meets specific requirements for compliance such as PCI-DSS.</p> <p>The Plan covers the corporate environment associated with Virtustream's IT assets, the local IT resources and the IT resources at Virtustream's Data Center. It consists of a series of guidelines (Incident Response Guidelines or "IRG") that should generally be followed as appropriate for the circumstances as when a security incident occurs or as part of the ongoing maintenance of this plan.</p> <p>As the incident progresses and has more impact (i.e. severity level increases), the escalation process will be used to engage appropriate resources. Incidents should be handled at the lowest escalation level that is capable of responding to the incident with as few resources as possible in order to reduce the total impact, and to keep tight control. The Table below defines the escalation levels with the associated team involvement.</p> |

| CA | APM      | AWS EC2 datacenters annually undergo SOC 3 audits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|    | MAA      | Physical access mechanisms (e.g., access cards, biometric devices, mantraps and portals) have been implemented and are administered by local operations staff to help ensure that only authorized individuals have the ability to access the data centers. Portals and mantraps have been installed as anti-tailgating measures in most of data center lobbies. Entry to and exit from the data centers is through either a portal or mantrap where present. In data centers without portals or mantraps, the security officer monitors the entrance to prevent tailgating. Where present, the portal/mantrap bypass doors are only used in the event an individual is unable to use the portal or mantrap in case of emergency. Examples include handicap, phobia, or other restrictions on a case-by-case basis. Tours and emergency data center security operations crews will be permitted to use the portal bypass door, when necessary. |
|    | CA Agile | Physical access mechanisms (e.g., access cards, biometric devices, mantraps and portals) have been implemented and are administered by local operations staff to help ensure that only authorized individuals have the ability to access the data centers. Portals and mantraps have been installed as anti-tailgating measures in most of data center lobbies. Entry to and exit from the data centers is through either a portal or mantrap where present. In data centers without portals or mantraps, the security                                                                                                                                                                                                                                                                                                                                                                                                                        |

Where present, the portal/mantrap bypass doors are only used in the event an individual is unable to use the portal or mantrap in case of emergency. Examples include handicap, phobia, or other restrictions on a case-by-case basis. Tours and emergency data center security operations crews will be permitted to use the portal bypass door, when necessary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | ASM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Physical access mechanisms (e.g., access cards, biometric devices, mantraps and portals) have been implemented and are administered by local operations staff to help ensure that only authorized individuals have the ability to access the data centers. Portals and mantraps have been installed as anti-tailgating measures in most of data center lobbies. Entry to and exit from the data centers is through either a portal or mantrap where present. In data centers without portals or mantraps, the security officer monitors the entrance to prevent tailgating. Where present, the portal/mantrap bypass doors are only used in the event an individual is unable to use the portal or mantrap in case of emergency. Examples include handicap, phobia, or other restrictions on a case-by-case basis. Tours and emergency data center security operations crews will be permitted to use the portal bypass door, when necessary. |
| AODocs     | N/A because all our data is hosted on the Google Cloud Platform infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Virtu      | We require 2 Factor and Private Keys to authenticate and Virtual Private Clouds for purposes of Inter-machine communication                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Salesforce | A customer's instance (org) of Salesforce is an aggregate of the raw data. The data model is very complicated, normalized, and the rows are identified by base62 encoded keys (primary and foreign). Re-establishing data ownership and a business context for the data would be very difficult to do at the database level. In order to reassemble any given customer's application (org), someone would need access to our source code in order to reassemble the raw data in a manner that could be interpreted and understood, and would need the entire set of tapes or disks/arrays supporting a given Instance, as the data for any one customer is spread across several tapes/disks. Data center engineers with physical access to the servers do not have logical access to the production environment and administrators with logical access to the systems do not have physical access to the data centers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| ServiceNow | <p>ServiceNow's architecture is built on a ServiceNow fully owned operated private cloud. This private cloud hosts the ServiceNow platform and applications that are offered to its customers under a subscription service model. The ServiceNow private cloud operates out of colocation data centers that provide robust physical and environmental controls, with ServiceNow staff exclusively providing the logical management. Access to the private cloud where customer data is hosted is only granted to ServiceNow staff based on their roles and job requirements. ServiceNow does not outsource any function that would give a third party access to customer data.</p> <p>ServiceNow's private cloud is a highly standardized environment from the identically configured cages in the data centers through to the consistent logical infrastructure. This private cloud is home to just ServiceNow, limiting the private cloud's footprint to only those technologies required to support this service. This allows for highly restricted networking rule sets regarding ingress and egress requirements and facilitates the ability for hardened systems, only allowing for the small number of necessary services, protocols and ports to be enabled.</p> <p>A ServiceNow instance represents an isolated logical environment consisting of application nodes in the web application tier and a dedicated database. Each customer will receive at least two instances, a production High Availability (HA) instance and a sub-production instance without HA. Each instance is accessed via a unique Domain name in the form of 'customername.service-now.com' (for a production instance) and 'customername-dev.service-now.com' as a sub-production example.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|     | There is no comingling of any customer data between instances and there is no single shared multi-tenant databases, with data from multiple customers stored therein.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| QTS | <p>QTS cloud employs security controls as needed to protect the confidentiality and integrity of the information being transmitted by utilizing Cisco AnyConnect VPN Client with SSL (TLS and DTLS) and IPsec (Internet Key Exchange Version 2 [IKEv2]). DTLS provides an optimized connection for latency-sensitive traffic, such as VoIP traffic or TCPbased application access, TLS (HTTP over TLS/SSL) ensures availability of network connectivity through locked down environments, including those using web proxy servers. IPsec/IKEv2 provides an optimized connection for latency-sensitive traffic when security policies require use of IPsec and complies with applicable federal laws, executive orders, directives, policies, regulations, standards, and guidance.</p> <p>The QTS Federal Cloud Infrastructure (QTS cloud) is divided into two separate, isolated firewalled environments, each having its own security boundaries, which are physically and logically separated. These are the QTS cloud Hypervisor Management Layer and the QTS cloud Service Delivery Layer.</p> <p>QTS cloud's Hypervisor Management Layer management is made available through dynamic FIPS 140-2 validated L2TP/IPSEC or SSL 3.0/TLS 1.0 encrypted VPN tunnels, which are authenticated against the RSA SecurID multi-factor authentication security appliances. Once fully authenticated, only a limited RDP session to the physical bastion host (which is also protected by the RSA SecurID multi-factor authentication security appliances) via jump domains is allowed, which prevents the presentation of information systems management related functionality at an interface for general users.</p> <p>QTS cloud's Service Delivery Layer management is also made available through FIPS 140-2 validated L2TP/IPSEC or SSL 3.0/TLS 1.0 encrypted VPN tunnels, which are authenticated against the RSA SecurID multi-factor authentication security appliances. Connection to the QTS cloud Service Delivery Layer is only available through dedicated site-to-site 140-2 validated L2TP/IPSEC or SSL 3.0/TLS 1.0 encrypted VPN tunnels or Trusted Internet Connection (TIC) monitored dedicated datelines to federal customer datacenters, which prevents the presentation of information systems management related functionality at an interface for general users.</p> <p>QTS cloud's Hypervisor Management Layer management is made available through dynamic FIPS 140-2 validated L2TP/IPSEC or SSL 3.0/TLS 1.0 encrypted VPN tunnels, which are authenticated against the RSA SecurID multi-factor authentication security appliances.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|  |                | <p>These ASA5555 Firewall servers allow Ariba Operations to rigorously protect Ariba from unauthorized access, providing full firewall security protection.</p> <p>The Equinix Data Center utilizes an array of security equipment, techniques, and procedures to control, monitor, and record access to the facility, including customer cage areas. All areas of the center are monitored and recorded using CCTV, and all access points are controlled. The Data Center is staffed with 24-hour security officers. Visitors are screened upon entry to verify identity, and escorted to appropriate locations. Access history is recorded for audit purposes.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|  | Fieldglass     | Please see the Fieldglass Security and Hosting Overview provided in the Supplemental Information section of this response.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|  | Hanna          | <p>The fundamental security architecture of the SAP Cloud infrastructure is the principal of a private cloud.</p> <p>Customers receive an isolated, logical grouping of several virtual machines and physical systems in dedicated customer private networks. Customer private networks are segregated from each other using virtual local area networks (VLAN) technology. Customer systems are deployed in the respective customer private network. Though customers are only able to view or access systems within their assigned customer private network.</p> <p>Design of customer private networks has to be defined in a workshop between SAP and the customer. Multiple customer private networks might be required to separate different tier levels or to implement customer data flow restrictions.</p> <p>SAP HANA Enterprise Cloud administrative tasks will be done using management networks. Administrative access to the management networks from the SAP internal networks is only possible using dedicated jump hosts with strong authentication.</p> <p>Security of the SAP internal network including SAP end user equipment is ensured using solutions like network admission control, Intrusion Prevention Systems, network filtering, strong authentication for remote access, internet content filtering, anti-virus scanner.</p> |
|  | SuccessFactors | <p>We serve our customers and end users from secure data centers around the world. Physical security features at these facilities include a 24x7x365 manned security station and biometric and man-trap access controls. The systems at these facilities are protected by firewalls and encryption technology. Operational redundancy features include redundant power, on-site backup generators, and environmental controls and monitoring.</p> <p>We employ a wide range of security features, including two factor authentication, data encryption, encoded session identifications and passwords. Our hosting providers conduct regular security audits of our infrastructure. We also employ outside vendors for 24x7x365 managed network security and monitoring. Every page we serve is delivered encrypted to the end user via a Transport Layer Security or TLS. We also use encryption technology in our storage systems.</p> <p>We continuously monitor the performance of our cloud offerings using a variety of automated tools. The architecture is designed with built-in redundancy for key components. We load balance at each tier in the network infrastructure. We also designed our application server clusters so that</p>                                                                                                           |

|        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|        | <p>servers can fail without interrupting the user experience, and our database servers are clustered for failover. We regularly back up customer data.</p> <p>We have implemented a multi-tiered architecture leveraging a strategy of “defense in depth” with 6 tiers of virtual networks (VLAN) for separation at each delivery layer. Network traffic is logged and monitored with live monitoring through an Intrusion Detection System (NIDS), and controlled through a series of switches and routers whereas data must pass through each tier in order to get to the next tier.</p> <p>In addition to Physical (site) security, the logical network stratification includes the following:</p> <p>Tier 1 (External VLAN/firewall) - The first tier consists of the external network and perimeter firewalls. These provide an initial layer of defense and protect the following layers from unauthorized access. Note that port 443 (HTTPS for web traffic) is the only port open.</p> <p>Tier 2 (Internal VLAN/firewall) - A de-militarized zone (DMZ) exists with load balancers. The DMZ provides a second line of defense while the load balancers are the first layer of scalability for the service delivery. The DMZ functions as a “neutral zone” between the network and the outside public network.</p> <p>Tier 3 (Web VLAN) - The Web tier presents the User Interface to the application, and separates the application, reporting and utility servers from the other tiers.</p> <p>Tier 4 (Application VLAN) - The Application tier contains the business logic and transaction servers, and is managed through clustered, high availability (HA) servers. Pre-configured as “Pods”, additional servers can be added as needed to provide scalability and performance.</p> <p>Tier 5 (Database VLAN) - The database tier is protected by an additional set of perimeter firewalls. The database processing is executed on database servers leveraging a multi-tenant, fully qualified database schema.</p> <p>Tier 6 (Storage VLAN) - Data is persisted to disks with include a Storage Area Network (SAN). Prior to store, data is encrypted by way of data appliance with AES-256 bit encryption.</p> |
| VMware | <p>VMware IaaS Services</p> <p>At the tenant level firewall services are provided via the vCloud Networking &amp; Security Edge Gateways for customers to configure and maintain. Firewall policies can be used to restrict and manage public/Internet-based traffic and create DMZ zones for multi-tier applications. Firewall policies can also be used to configure access policies between internal IP networks and VxLAN segments. Stateful inspection firewalling can be applied on the external interface of the vCNS Edge Gateway.</p> <p>VMware architects, provisions, monitors and manages the vCloud Hybrid Service infrastructure and surrounding components. As described in the AT 101 (ISO 27001) report, access points such as delivery and loading areas and other points where unauthorized persons may enter the premises are controlled and, if possible, isolated from information processing facilities to avoid unauthorized access. The details of this control are not disclosed publicly.</p> <p>VMware AirWatch</p> <p>We implement multiple security measures to protect hosted servers, including physical and logical controls. Due to FOIA requirements and the competitive EMM marketplace, we cannot provide specific architecture details at this time.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| FireEye      | High-level architecture diagrams following industry best practices utilizing both virtual and physical controls are available and contained in the SOC 2 report.                                                                                                                                                                                                                                                                         |
| VirtueStream | Virtustream utilized a virtual local area network (VLAN) and virtual route forwarding (VRF) to logically segregate all customers in the IaaS environment. Every customer chooses their own IP Address range, as there is no ability to overlap IP Addresses between customers. In addition, every customer is logically separated with Firewall Context with their own rule, where by default everything is denied except specific rule. |

8.6.10 Provide Security Technical Reference Architectures that support Infrastructure as a Service (IaaS), Software as a Service (SaaS) & Platform as a Service (PaaS).

| Salesforce | <p>Salesforce offers market leading PaaS and market leading SaaS solutions. Salesforce does not provide IaaS as a direct service offering to our customers, it is an underlying part of our PaaS and SaaS offerings.</p> <p>The Salesforce Platform is built for cloud computing, with multitenancy inherent in its design. To meet the high demands of its large user population, Force.com's foundation is a metadata-driven software architecture that enables multi-tenant applications.</p> <p>Force.com combines several different persistence technologies, including a custom-designed relational database schema, which are innately designed for clouds and multitenancy—no virtualization required.</p> <p>Force.com's core technology uses a runtime engine that materializes all application data from metadata—data about the data itself. In Force.com's well-defined metadata-driven architecture, there is a clear separation of the compiled runtime database engine (kernel), tenant data, and the metadata that describes each application. These distinct boundaries make it possible to independently update the system kernel and tenant-specific applications and schemas, with virtually no risk of one affecting the others.</p> <p>Every logical database object that Force.com exposes is internally managed using metadata. Objects, (tables in traditional relational database parlance), fields, stored procedures, and database triggers are all abstract constructs that exist merely as metadata in Force.com's Universal Data Dictionary (UDD). For example, when you define a new application object or write some procedural code, Force.com does not create an actual table in a database or compile any code. Instead, Force.com simply stores metadata that the system's engine can use to generate the virtual application components at runtime. When you need to modify or customize something about the application schema, like modify an existing field in an object, all that's required is a simple non-blocking update to the corresponding metadata.</p> <p>Because metadata is a key ingredient of Force.com applications, the system's runtime engine must optimize access to metadata; otherwise, frequent metadata access would prevent the service from scaling. With this potential bottleneck in mind, Force.com uses massive and sophisticated metadata caches to maintain the most recently used metadata in memory, avoid performance-sapping disk I/O and code recompilations, and improve application response times.</p> |                                                                         |

|                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                                              | The multitenant architecture and secure logical controls address separation of Customer Data. The Salesforce infrastructure is divided into a modular architecture based on “instances”. Each instance is capable of supporting several thousand customers in a secure and efficient manner. Salesforce uses the instance architecture to continue to scale and meet the demands of our customers. There are appropriate controls in place designed to prevent any given customer’s Salesforce instance from being compromised. This functionality has been designed and undergoes robust testing through an on-going process by both Salesforce and its customers. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| QTS                                          | The QTS cloud makes use of unique managed service provider architecture layer(s). Information systems, particularly those based on cloud architecture models, are made up of different service layers. The layers of the QTS cloud that are defined in its System Security Plan, and are not leveraged by any other Provisional Authorizations, are: Infrastructure as a Service (IaaS). Note: Please refer to NIST SP 800-145 for information on cloud computing architecture models.                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| SAP                                          | Ariba                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Ariba recognizes that security is a critical component of effective electronic commerce architecture and takes necessary security measures to protect any information passed between buyers and suppliers. Ariba implements security using a variety of hardware, software, and procedural best practices. Full details about our security mechanisms and procedures are available in Chapter 3 of the Ariba Cloud Technical Infrastructure Whitepaper.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|                                              | SuccessFactors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | We understand the critical importance of information protection and recognize the contribution that information security makes to an organization’s strategic initiatives and overall risk management. We have implemented security controls and practices designed to protect the confidentiality, integrity, and availability of customer information. We continually work to strengthen and improve those security controls and practices as well.<br>The current best practices associated with information security involve a layered approach, what the industry calls “defense in depth.” Regardless of the software delivery model, security cannot be implemented at a single “make or break” point. For a SaaS provider to facilitate data security for sensitive information, it must have a comprehensive, multifaceted security program in place. We take a holistic approach to information security, implementing a multilayered defense at all the touch points in the information flow—both the physical and logical, applied across the database, middleware, application, and network and communication layers—to offer complete data privacy, transparency, and audit controls. |
| VMware                                       | Compliance Reference Architecture Framework (RAF) that provides a consistent method for VMware, its partners, and customers to assess and evaluate the impact of regulations on virtual and cloud environments. The intent of the RAF is to provide a single framework for VMware, its partners, and organizations to address a variety of compliance requirements across an IT infrastructure. This includes: Product Applicability Guide (PAG), Architecture Design Guide (ADG), and a Validated Reference Architecture (VRA).                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| FireEye                                      | High-level architecture diagrams following industry best practices utilizing both virtual and physical controls are available and contained in the SOC 2 Type 2 report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| VirtueStream                                 | Virtustream Cloud Platform Security (for the Infrastructure-as-a-Service environment) is designed, built, and operated to provide highest level of infrastructure security available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Proposed State of Utah Security Architecture |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

**Figure 1. xStream Enterprise Architecture**

State of Utah end users would access the hosted SAP environments via a MPLS connection (Provided by State of Utah). Additionally a VPN connection has been sized at 100Mbps however this can be decreased or increased depending on the exact requirements.

State of Utah end users accessing our enterprise platform would first hit the landing zone in a dedicated virtual local area network (VLAN) and dedicated virtual route forwarding (VRF). The next hop into the enterprise platform is a dedicated firewall (FW) context on a Cisco Firewall services module. After traversing the core, traffic hits another dedicated VRF and drops into the platform network and compute (CPU and Memory essentially a blade server) layer. All traffic is VLAN separated. At each compute host, a hypervisor based firewall and intrusion protection system (IPS) provides a dedicated client rule set to further ensure network security. All traffic transitioning from one zone to another are monitored by Intrusion Detection and Intrusion Prevention systems.

Traffic coming in via the internet hits the front-end perimeter with load balancing modules and multi-context Cisco firewalls. All traffic then passes through intrusion detection system and intrusion protection systems. As in the enterprise compute layer, every host in our demilitarized zone (DMZ) has a hypervisor-based firewall and IPS with dedicated client rule sets. Again, all traffic is VLAN separated as well.

Traffic that needs to traverse from DMZ to the enterprise runs through another dedicated FW context and IDS/IPS.

All of the State of Utah environments and data will be hosted in Virtustream's data centers within the continental United States.

Standard Services used in Virtustream's management environment and in all client environments including the following:

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| CA     | <p>At CA Technologies, we comply with a multifaceted security standard that includes requirements for security management, policies, procedures, network architecture, software design and other critical protective measures. We ensure the maintenance of vulnerability management programs, implement strong access control measures, regularly monitor and test networks and adhere to the highest industry compliance and security policies. CA offers a variety of SaaS solutions, details for each offering has been provided in Exhibit 1 and 2 of this proposal.</p> |
| Google | <p>All connections from customer end point devices to Google's Front End Servers are encrypted with enforced HTTPS sessions using Forward Secrecy. Google websites and properties use robust public key technologies: 2048-bit RSA or P-256 ECDSA SSL certificates issued by a trusted authority (currently the Google Internet Authority G2).</p>                                                                                                                                                                                                                            |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Salesforce | <p>Government Cloud Encryption Capabilities:</p> <p>As part of the Salesforce Government Cloud, Salesforce is capable of responding to FIPS 140-2 cryptographic implementations for data being transferred between the State's web browser and Salesforce. Data that resides within Salesforce's protected boundary does not use FIPS 140-2 validated encryption as compensating/mitigating controls are in place to protect data. Additional information is provided below.</p> <p>Data In Motion:</p> <p>Salesforce employs cryptographic mechanisms to protect information during transmission. All transmissions between the user and Salesforce are encrypted by default with a 2048-bit Public Key. Our service uses International/Global Step Up certificates. We support one-way TLS, in which customers create secure connections before sharing private data.</p> <p>Secure routing and traffic flow policies ensure that customer traffic is encrypted entering Salesforce until the load balancer decrypts the traffic. The load balancers decrypting the traffic are FIPS 140-2 compliant and are located inside of the Salesforce Government Cloud isolation boundary.</p> <p>Data At Rest:</p> <p>NIST SP 800-53 Rev. 4 states in SC-28, "Information at rest refers to the state of information when it is located on a secondary storage device (e.g., disk drive, tape drive) within an organizational information system." SC-28 also states, "Organizations may choose to employ different</p> |

|     | <p>mechanisms to achieve confidentiality and integrity protections, as appropriate.” All secondary storage media (hard drives, disk drives, and tapes) containing customer data are maintained within Salesforce’s secure production data centers until the media has been sanitized and destroyed. Salesforce relies on physical access controls as a compensating control to protect the data.</p> <p>For primary data storage, Salesforce provides customers with a built-in capability to apply field-level encryption, using 128-bit keys with AES encryption, for a selection of custom fields included in the Force.com Platform and Salesforce Services. Field-level encryption ensures the data associated with designated fields is encrypted in storage.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| SAP | Ariba                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Sensitive data elements, including PCI Primary Account Numbers and system account parameters for internal application communications, are stored in Ariba databases encrypted by the AES (Advanced Encryption Standard) and Triple DES (Data Encryption Standard) encryption algorithms with a minimum key length of 128 bits. Encryption technology is also applied for the client connection to the Web site and to the hosted application passwords in storage. Customer user passwords are one way hashed using SHA256 and salted with random data. Limited Ariba Operations personnel have data query access and monitoring rights for the Ariba Hosting program.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|     | Fieldglass                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

SAP HANA Enterprise Cloud datacenters are enterprise-class security with enterprise-class protection including data encryption, network encryption, firewalling, network isolation, and intrusion detection. HANA data is protected in multiple different ways. SAP HANA Enterprise Cloud is a managed cloud service that employs either a VPN or MPLS connection for transit. By default VPN is encrypted and MPLS can be encrypted. The customer procures the method of connection. At installation, HANA data can be encrypted using a feature called Data Volume Encryption. This encryption protects data in the persistence layer. Storage volume access is restricted to the customer account that created the volume, thus denying all other customer accounts the permission to view or access the volume that includes data isolation, masking, zoning and Logical Unit (LUN) binding. Strict user and access management, authorization management according to the need-to-know principle for administrative accounts, and security logging and security monitoring for critical activities or access, also protect data stored in HANA. |

| FireEye      | <p>At rest: Data are collected using automated batch and real-time processes and by manual personnel-driven actions via an Analyst facing Portal. Any information that is collected may be stored temporarily within appliances attached to our customers' networks and may subsequently be transmitted back to one or more FireEye datacenters. Data transmitted from a customer's network to a datacenter travels over a strong encryption Virtual Private Network ("VPN") established by the appliances.</p> <p>At transit: FireEye's network sensors are configured to collect full packet capture of customer network streams, including those originating from or destined to potentially malicious IP addresses, matching signature-based network indicators of compromise, results of domain name lookups, and full e-mail messages including headers, content and attachments. This information is primarily stored on-site on the appliances and only meta data matching FireEye / Mandiant indicators of compromise are sent to FaaS.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| VirtueStream | <p>Virtustream's use of Intel® Trusted Execution Technology (Intel® TXT), a hardware-root of trust security feature, and Intel® AES-NI encryption acceleration helps secure and protect virtualized environments against malware and provides more of the critical infrastructure and data protection assurances needed to enable trusted multi-tenancy in the cloud. Virtustream offers solution for data-at-rest and data-in-transit encryption solution for our customers as optional service, as most of our customer environment is only accessible via private network and only to the internal users of the customer. Solutions available to our customer as follows.</p> <ol style="list-style-type: none"> <li>1. IPSEC VPN Tunnel for data-in-transit and</li> <li>2. VM level encryption for files and databases</li> <li>3. Encrypted Backup (all backups are encrypted by default)</li> </ol> <p>The technologies of encryption available throughout the entire data lifecycle and all are FIPS 140-2 compliant.</p> <ol style="list-style-type: none"> <li>a) DB and File System Encryption</li> <li>b) Encrypts file system and volume data transparently to: <ol style="list-style-type: none"> <li>i) Applications</li> <li>ii) Databases</li> <li>iii) Storage Infrastructure</li> </ol> </li> <li>c) Integrated Key Management</li> <li>d) High Efficiency Encryption</li> <li>i) Centralized Key Management</li> <li>ii) Policy Management</li> <li>iii) Detailed Auditing</li> <li>iv) Highly Available</li> <li>v) FIPS 140-2 Certified Hardware Appliance</li> <li>vi) Very Low Encryption Penalty due to Intel AES-NI enabled chip sets used</li> <li>e) Encryption of Virtual Machine, OS and App <ol style="list-style-type: none"> <li>i) Integration of SafeNET Protect-V</li> <li>ii) Logging of all image access</li> </ol> </li> <li>f) Encryption in Archive</li> <li>g) Implements Encryption, Access Control, Auditing on Host (LUW)</li> <li>h) Kernel Level Driver – Win</li> <li>i) File System – Unix/Linux</li> <li>j) Support for file systems and raw partitions</li> <li>k) Highly efficient block encryption</li> </ol> |

8.6.13 Describe policies and procedures regarding notification to both the State and the Cardholders of a data breach, as defined in this RFP, and the mitigation of such a breach.

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| CA         | <p>CA Technologies abides to contractual requirements for notification, in addition to working with legal to ensure compliance with regulatory requirements. There may be cases where incident analysis completion is a requirement for confirming the breach, and / or its impact and data leakage boundary. Prior to completion of this activity, CA may not have the needed conclusions for customer communication. Once subscriber data has been identified as part of the investigation, said subscribers will be notified as soon as possible and not longer than 5 days. A report of the incident will be available and distributed to clients within 30 days.</p> <p>Please note that none of the offerings proposed as considered payment products and are not intended for use of storage of cardholder data.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Google     | <p>Google will take and implement appropriate technical and organizational measures to protect Customer Data against accidental or unlawful destruction or accidental loss or alteration or unauthorized disclosure or access or other unauthorized processing. If Google becomes aware of a Data Incident, Google will promptly notify Customer as permitted by law of the Data Incident, and take reasonable steps to minimize harm and secure Customer Data. Notification(s) of any Data Incident(s) will be delivered to the Notification Email Address provided by the Purchasing Entity in connection with the Agreement or, at Google's discretion, by direct communication (e.g., by phone call or an in-person meeting).</p>                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Salesforce | <p>Salesforce will promptly notify the State (within 48 hours, reflected in a negotiated agreement between the parties) in the event Salesforce becomes aware of an actual or reasonably suspected unauthorized disclosure of Customer Data. Notification may include phone contact by Salesforce support, email to the State's administrator and Security Contact (if contact is submitted by State and contact information is kept up to date), and public posting on trust.salesforce.com.</p>                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

All affected customers should be informed within at most 36 hours of confirming a potential breach in the privacy of their data. Following incident resolution, follow-up is required to ensure that the incident has been resolved effectively and that the threat is no longer present. We are aligned with ISO 27k standards for event and incident management and have formal incident management policies and processes in place. These policies and procedures are tested in the ISO 27k and SOC 2 audits. |
| FireEye      | FireEye has a documented policy for incident management that has been approved by management and communicated to appropriate constituents and owners. It is continuously maintain and reviewed annually. The plan has a reporting structure and escalation path. An incident response team with defined roles and response related qualifications are available 24x7x365. The team maintains chain of custody for evidence during the incident investigation. There is a process for reporting client notification for regulatory, legal and contractual issues after a breach if a breach were to be confirmed. If a confirmed breach were to occur a management team would review all the factors and develop a remediation plan to mitigate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| VirtueStream | <p>There are two primary Incident types; Security Incidents, where there is a possible breach in systems or data integrity, and Services, where there is in impacted or affected service. Although there is some overlap, generally any security-related incident should be classified as a Security Incident and the response must be managed using the 'Virtustream Information Security Procedure – Security Incident Response Plan'.</p> <p>The purpose of this security incident response plan is to provide general guidance to Virtustream staff- both technical and managerial – to enable quick and efficient recovery from security incidents; respond in a systematic manner to incidents and carry out all necessary steps to correctly handle an incident; prevent or minimize disruption of critical computing services; and minimize loss or theft of sensitive or mission critical information including sensitive credit card data. The plan is also a guide to sharing information with other stakeholder organizations who might be impacted by such security incidents such as the credit card associations and law enforcement.</p> <p>The Security Incident Response Plan (SIRP) provides guidance to prepare for, respond to, and recover from potential incidents. Policy statements surrounding the IR-Plan are provided to ensure continued upkeep and standardized use. The SIRP guidance at the procedural level defines the roles, responsibilities, communication methods and flows, contact information, types of potential incidents, and immediate actions that are to be taken upon an incident's identification, and elaborates with subsequent recovery steps. Virtustream's Incident Response Policy requires the implementation and testing of a generalized plan that adheres to the International Standards Organization 27002 guidance for incident management and response, but meets specific requirements for compliance such as PCI-DSS.</p> <p>The Plan covers the corporate environment associated with Virtustream's IT assets, the local IT resources and the IT resources at Virtustream's Data Center. It consists of a series of guidelines (Incident Response Guidelines or "IRG") that should generally be followed as appropriate for the circumstances as when a security incident occurs or as part of the ongoing maintenance of this plan.</p> <p>As the incident progresses and has more impact (i.e. severity level increases), the escalation process will be used to engage appropriate resources. Incidents should be handled at the lowest escalation level that is capable of responding to the incident with as few resources as possible in order to reduce the total impact, and to keep tight control. The Table below defines the escalation levels with the associated team involvement.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

### **8.7 Migration and Redeployment Plan**

8.7.1 Offeror must describe how it manages the end of life activities of closing down a service to a Purchasing Entity and safely deprovisioning it before the Offeror is no longer contractually obligated to maintain the service, include planned and unplanned activities. An Offeror's response should include detail on how an Offeror maintains security of the data during this phase of an SLA, if the Offeror provides for redundancy during migration, and how portable the data is during migration.

The end of life activities for each Purchasing Entity will vary based on the type of service they are currently using and the service that they will be moving too. All Purchasing Entities will be notified in advance of any end of life service so that the Purchasing Entity can work with Carahsoft and the service providers to develop a plan exporting and transitioning data.

8.7.2 Offeror must describe how it intends to provide an orderly return of data back to the Purchasing Entity, include any description in your SLA that describes the return of data to a customer.

At all times during the course of the Service, the Purchasing Entities will have access and ownership of their data. The Purchasing Entity is free to download or access the data through a variety of means based on the service at any time during their service period.

## **8.8 Service or Data Recovery**

8.8.1 Describe how you would respond to the following situations; include any contingency plan or policy.

a. Extended downtime.

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                        |

| CA         | APM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | If unable to resolve in a timely manner, all customers will be notified via email to the registered admin                                                                                                                                                                                                                              |
|            | MAA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Customers are kept abreast with progress during incidents, including outages. CA utilizes best-of-breed notification system which enables customer contacts to self-subscribe to different types of notifications that they would be interested in. A DR plan has been created should the extended down time result in DR declaration. |
|            | CA Agile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | We would failover to our warm data center in order to restore access to the application as quickly as possible. This is done according to our Disaster Recovery Plan                                                                                                                                                                   |
|            | ASM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | If unable to resolve in a timely manner, all customers will be notified via email to the registered admin. Failover from the primary to DR site may be utilized if the extended amount of time warrants declaration of DR.                                                                                                             |
| Google     | Due the redundant nature of the Google infrastructure there is no expectation of any extended downtime. If a data center in use by any of your end users suffers a catastrophic failure, Google's dynamic health monitoring would just reroute the session to a different data center.                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                        |
| AODocs     | All the AODocs data is hosted on the Google Cloud Platform infrastructure. AODocs does not manage any physical infrastructure. Due the redundant nature of the Google infrastructure there is no expectation of any extended downtime. If a data center in use by any of your end users suffers a catastrophic failure, Google's dynamic health monitoring would just reroute the session to a different data center.                                                                                                                  |                                                                                                                                                                                                                                                                                                                                        |
| Virtru     | Notify users that Virtru service is unavailable, and recommend that they use their offline encryption tools and backups to perform emergency functions.                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                        |
| Salesforce | Salesforce has maintained high levels of availability across all Salesforce instances since inception. As the only on-demand vendor to provide daily service-quality data on a public Web site ( <a href="http://trust.salesforce.com">http://trust.salesforce.com</a> ), Salesforce proves that we are the leader in availability. And by making its track record completely transparent, Salesforce proves we are worthy of our customers' trust. To ensure maximum uptime and continuous availability, Salesforce provides the best |                                                                                                                                                                                                                                                                                                                                        |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|            | <p>redundant data protection and most advanced facilities protection available, along with a complete data recovery plan—all without affecting performance.</p> <p>Salesforce uses commercially reasonable efforts to make its on-demand services available to its customers 24/7, except for planned downtime, for which Salesforce gives customers prior notice, and force majeure events. Excellent availability statistics are critical to Salesforce's customers' success and to the success of Salesforce as a company. Live and historical statistics on the Salesforce system performance are publicly published at <a href="http://trust.salesforce.com/trust/status">http://trust.salesforce.com/trust/status</a>.</p> <p>The persistence layer underlying Salesforce Platform is proven database technology that powers all of Salesforce's products today, serving more than 150,000 organizations and over 4 billion transactions per day with an average request response time of less than .25 seconds, all with an average up time of 99.9+ percent.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| ServiceNow | <p>ServiceNow's data centers and cloud-based infrastructure have been designed to be highly available. All servers and network devices have redundant components and multiple network paths to avoid single points of failure.</p> <p>At the heart of this architecture, each customer application instance is supported by a multi-homed network configuration with multiple connections to the Internet. Production application servers are load balanced within each data center. Production database servers are replicated in near-real time to a peer data center within the same geographic region.</p> <p>ServiceNow leverages this Advanced High Availability (AHA) architecture for customer production instances in several ways:</p> <ul style="list-style-type: none"> <li>•In the event of the failure of one or more infrastructure components, service is restored by transferring the operation of customer instances associated with the failed components to the peer data center.</li> <li>•Before executing required maintenance, ServiceNow can proactively transfer operation of customer instances impacted by the maintenance to the peer data center. The maintenance can then proceed without impacting service availability.</li> </ul> <p>This approach means that the transfer between active and standby data centers is being regularly executed as part of standard operating procedures – ensuring that when it is needed to address a failure, the transfer will be successful and service disruption minimized.</p> <p>RTO is 2 hours. RPO is 1 hour.</p> <p>See the "ServiceNow Security, Operations, and Compliance White Paper" included with this response for more information.</p> |
| QTS        | <p>In the rare instance of failure of the commercially-delivered electrical power, back-up systems at each QTS data center start instantaneously. Batteries provide power for the first 12-15 seconds while on-site diesel generators spin up to synchronize their output with the battery-supplied feed. Once on-line, the generators can supply power indefinitely, and the IT equipment on the data floor as well as critical infrastructure components are all unaffected.</p> <p>While the basics of reliable power seem simple, none of this is taken for granted. Battery banks are sized to provide 15 minutes of power, well beyond the 15 seconds that it typically takes generators to come on line. Inspections are conducted daily and quarterly to ensure that the battery banks are prepared at all times. The diesel generators are inspected by running them each month to circulate and condition the fuel, then running them annually under the full simulated load of the current IT equipment on the data center floor. Factory technicians inspect and maintain the generators semi-annually. Quantities of fuel sufficient to support 48-72 hours of</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|     |                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|     | operation without resupply are stored on-site, and re-supply contracts are in place with multiple providers to have fuel delivered as soon as the generators come on line. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SAP | Ariba                                                                                                                                                                      | <p>Ariba has implemented two sites within each region. In North America the sites are currently located in San Jose, California and Sterling, VA. In Europe the sites are located in St. Leon-Rot, Germany and Amsterdam, Netherlands. The act of failing over from one site to another has a design goal for its Recovery Time Objective (RTO) of no more than four hours. The design goal for the Recovery Point Objective (RPO) is five minutes.</p> <p>Disaster recovery options are included for all Ariba Cloud Services. In the event of a fail-over to the disaster recovery site, no customer changes are required as all URLs that customers use to reach the applications will continue to work. Ariba will notify customers via their email addresses in the event of unplanned downtime.</p> <p>Internally, Ariba uses a documented system recovery plan that outlines the approach and steps for recovering the applications. This document defines roles and responsibilities in the event of disaster:</p> <p>Local Ariba staff maintains the hardware remotely.</p> <p>Ariba maintains the application software.</p> <p>Processes are in place to keep database and file servers in sync between primary and backup data centers.</p> <p>The failover process of all parts of the infrastructure is automated.</p> <p>In the event of a catastrophe, Ariba will declare the primary data center “down” and locally the script will be run to switchover and start the applications at the remote data center.</p> <p>Ariba tests power outage backup scenarios and the Disaster Recovery Plan on a periodic basis to ensure it is up-to-date, successful, and effective.</p> |

If DR (optional offering) is selected, the systems could move to secondary DC that where contracted with a DR option &amp; HEC declaring DR.</p> <p>Regular system downtime for patching etc. is planned in advance with the customer and typically follows customers maintenance schedules.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|     | Hybris                                                                                                                                                                     | <p>SAP Hybris offers continuous 24/7 systems monitoring in-place, which automatically notifies you, SAP Hybris support and optionally your designated implementation partner in the event of any monitored system problem. Tools used for monitoring include HP Sitescope and Nagios. This service ensures quick response times to emergency problems. Standard monitors are in place for basic site availability. Customer can utilize additional 3rd party monitoring services should it wish to add additional monitoring. Upon request, monthly or quarterly reviews are offered to review performance over the period. When a system problem occurs, in addition to monitor alerts sent to the customer, SAP Hybris support may send emails to a designated customer notification email address to provide status, updates or further detailed information. In addition, a support ticket would be created which would include such information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|              |  | <p>staffed and monitored to help prevent acts of sabotage or vandalism. All production data centers are ANSI/EIA/TIA-942 Tier III/IV facilities, and are ISO 27001 certified.</p> <p>Production data centers are also geographically dispersed to help prevent a single event from affecting more than one data center. In the event a production data center has an outage we failover to an alternate data center in the same geographic region to minimize impact to customers.</p> <p>Our Cloud Operations teams are also geographically dispersed, working in offices in the US, Europe, South America, and India. Should an office be impacted by an environmental event or pandemic, other offices can continue operations.</p> <p>Aspects of the plan are described in the SOC reports, Disaster Recovery Plan ("DRP") and Business Continuity Plan ("BCP") solutions are dependent on several factors. The customer may be responsible for parts of the recovery/continuity activities.</p> |
| VMware       |  | VMware vCloud Air leverages proven VMware High Availability technology to minimize the risk of extended downtime. In the unlikely event that an extended outage does occur, VMware will support guide the customer's efforts to restore services to an alternative vCloud Air or vCGS datacenter. We will also provide remedies in the form of service credits as outlined in the following VMware vCloud Air, vCGS, VMware AirWatch and VMware Identity Manager SLAs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| FireEye      |  | FireEye has a mature and documented Business Continuity Plan and Disaster Recovery Plan that follows industry best practices that is reviewed and tested annually. The BCP/DRP plan has RPO/RTO timing criteria and other critical business requirements that is available for review if requested in the future.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| VirtueStream |  | In the event of extended downtime affecting production systems, Virtustream and customer would jointly evaluate the situation and mutually decide on failover declaration, whereby Virtustream would then execute the failover plan to restore customer operations to the secondary data center.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

b. Suffers an unrecoverable loss of data.

|        |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Salesforce | <p>To maximize availability, the service is delivered using multiple world-class data centers supporting primary and replicated disaster recovery instance, plus a separate production-class lab. The infrastructure utilizes carrier-class components designed to support millions of users. Extensive use of high-availability servers and network technologies, and a carrier-neutral network strategy, help to minimize the risk of single points of failure, and provide a highly resilient environment with maximum uptime and performance.</p> <p>The Salesforce services are configured to be N+1 redundant at a minimum, where N is the number of components of a given type needed for the service to operate, and +1 is the redundancy. In many cases, Salesforce has more than one piece of redundant equipment for a given function.</p>                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|            | Hanna                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Data loss is defined by RPO & RTO. HEC has a maximum RPO of 30 mins & RTO of 12 hours.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|            | Hybris                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | For a cloud solution, data backup and restore is handled by SAP. SAP shall follow its archiving procedures for Customer Data as set out in the SAP Hybris Commerce, cloud edition Services Description. In the event of any loss or damage to Customer Data, SAP shall use commercially reasonable efforts to restore the lost or damaged Customer Data from the latest back- up of such Customer Data maintained by SAP in accordance with the archiving procedure described in its SAP Hybris Commerce, cloud edition Services Description. SAP shall not be responsible for any loss, destruction, alteration or disclosure of Customer Data caused by any third party, (except those third parties sub- contracted by SAP to perform services related to Customer Data maintenance and back-up). |
|            | SuccessFactors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Our SLA provides tenant remuneration for losses they may incur due to outages within the infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| VMware     | <p>VMWare IaaS Services</p> <p>As discussed in detail in section 8.8.2.1.a below, VMware IaaS services are architected to minimize the risk of unrecoverable data loss. In addition option services such as vCloud Air Data Protection can be leveraged to further mitigate any risk. VMware's vCloud Air policy regarding data loss can be found in the vCloud Air Terms of use. VMware's vCloud Government Service policy regarding data loss can be found in the vCloud Government Service Terms of Service</p> <p>AirWatch Hosted Services</p> <p>AirWatch Business Continuity and Disaster Recovery strategies include data and hardware redundancy, network configuration redundancy and backups, and robust, regular testing exercises. AirWatch features active-passive configurations for high availability and redundancy with all components made to failover with minimal downtime. Load balancing capabilities are deployed across multiple data centers to ensure timely server recovery. AirWatch also incorporates replication technology featuring SQL log shipping or network SAN byte replication to prevent data loss.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|              | <ul style="list-style-type: none"> <li>• Due to FOIA restrictions and the competitive nature of the EMM marketplace, we cannot provide specific details regarding recovery strategies or timelines.</li> </ul>                                                                                                                                                                                                                                                 |
| FireEye      | FireEye has a mature and documented Business Continuity Plan and Disaster Recovery Plan that follows industry best practices that is reviewed and tested annually. The BCP/DRP plan has RPO/RTO timing criteria and other critical business requirements that is available for review if requested in the future.                                                                                                                                              |
| VirtueStream | Multiple copies of customer data exist in multiple datacenters – in the primary datacenter, there is the production copy and a local backup. The local backup is replicated to a secondary datacenter and the production datastores associated with coreVM's are also replicated at regular intervals to the secondary datacenter. If NASPO feels that additional steps/redundancy are required to maintain recoverability, Virtustream is open to discussion. |

c. Offeror experiences a system failure.

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                           |

| Google     | Google's corporate network is separate from it's production infrastructure. Google is a global organization that has support personnel located at key office installations and tests our business continuity programs annually. These tests are to validate that if corporate headquarters is off the grid that critical business functions can be picked up by other staff.                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                           |
| AODocs     | AODocs runs 100% over Google's Cloud Platform infrastructure that is naturally redundant, and all AODocs internal systems such as technical support, email, collaboration, source code hosting, etc are run on cloud based services. AODocs personnel can work from any physical location without any business disruption and they do work from remote locations on a regular basis. If one of the AODocs facilities were to be temporarily unavailable due to a natural disaster, AODocs personnel would be able to perform their work without significant interruption.                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                           |
| Virtru     | Notify users that Virtru is or will be permanently unavailable, and recommend that they use their offline encryption tools and backups to perform emergency functions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                           |
| Salesforce | <p>Please see response to items a. and b. above and d. and e. below.</p> <p>Salesforce has documented Disaster Recovery and Business Continuity plans for critical business functions. The Disaster Recovery and Business Continuity plans are tested at least annually. A post mortem documenting the results of the disaster recovery tests can be provided to customers with a signed NDA in place.</p> <p>Business continuity plans are updated each year, including the list of business processes, recovery time objectives, and key resources. Senior management is included in this process. Business continuity plans are exercised on an annual basis. Action items and lessons learned are tracked from each incident and exercise conducted. Action items are prioritized and tracked until</p> |                                                                                                                                                                                                                                                                                                                                                                                                           |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|            | <p>closed. Salesforce has developed additional procedures, processes and plans, including a Pandemic plan.</p> <p>Salesforce also recommends customers also devise their own backup strategy for their data, as there is a fee for customers to request for restoration from Salesforce backups. Salesforce provides multiple ways for our customers to obtain periodic backups of its data. We offer a weekly export service (WES) for those customers requiring a local backup copy of their data or a data set for import into other applications (such as an ERP system). Salesforce also supports data replication, which allows customers to store and maintain a local, separate copy of their organization's Salesforce data including the META data (logins, etc.) for specialized uses, such as data warehousing, data mining, custom reporting, analytics, and integration with other applications. Data replication provides customers with local control and the ability to run large or ad hoc analytical queries across the entire data set.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| QTS        | <p>QTS has established an alternate processing site including necessary agreements to permit the resumption of information system operations for essential missions and business functions within [Assignment: organization-defined time period consistent with recovery time objectives] when the primary processing capabilities are unavailable.</p> <p>The QTS cloud hosting facilities in Richmond, VA (RIC1) and Atlanta, GA (ATL1) have agreements with each other to restore services in the event that one of the sites becomes unavailable. Both facilities are QTS managed facilities and are always available to meet the recovery time and recovery point objectives for the system. Agreements are in place to allow QTS to access resources at the alternate processing site physically and via the QTS client network. Richmond and Atlanta Datacenters are independently operated datacenters that offers disaster recovery services to customers. The contingency approach ensures that hardware and software components needed for recovery efforts are already at the alternate facility.</p> <p>QTS ensures that equipment and supplies required to resume operations are available at the alternate site or contracts are in place to support delivery to the site in time to support the organization-defined time period for resumption.</p> <p>Network circuits, networking infrastructure, storage, virtual servers, and management components required to resume operations are available and configured at the alternate site.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| SAP        | Ariba                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>"Ariba modules automatically persist object state to the underlying relational database as users work. When a user performs a significant action, for example, adding an item to an order, performing an approval, etc., the Ariba application tier is aware of the change and automatically saves the relevant object state to the database. This provides transparent persistence of the user's work without the user having to "save" or "submit" changes to avoid losing work in the event of failure or session timeout. This in turn means that the loss of any connections between the tiers or failure of one of the tiers will not leave data in an inconsistent state.</p> <p>While object data is cached in the middle tier for performance, the official record is stored in the database to avoid any potential data loss or corruption. This means that recovery for Ariba modules is implicit and automatic. When the modules start, they retrieve the state of the various business objects from the underlying database as needed for user sessions. If an Ariba module fails, there is no special application recovery process other than restarting the module. The Ariba module will automatically connect to the database and as clients login and commence working, all required business object data will be retrieved from the database."</p> |

|  | Fieldglass | Fieldglass' business continuity program (BC Program) was established to ensure that, after a complete disruption of its Chicago and/or Naperville, Illinois offices, all employees and the functions for which they are responsible, are capable of continued operations in less than one business day. This includes office space as well as all equipment and supplies needed to continue its operations without an interruption in customer services. Fieldglass' BC Program is integrated into all facets of the company due to the criticality of the product that it sells and supports. As such, representatives from all areas of the company are responsible for ensuring that they are familiar with their duties and responsibilities during a disruption and how to recover their areas after the disruption occurs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|  | Hanna      | <p><b>Service Level Credits</b></p> <p>Where SAP fails to meet a Service Level, SAP will be liable to Customer for the corresponding Service Level Credit as set out in this section. The Service Level Credit is calculated as the sum of the Service Level Credits for both DEV/QAS and PRD for the TA Service Level defined in section 5.1 above. SAP will deduct the amount of any Service Level Credits owed to Customer from the next invoice (or, if there is no such invoice, by bank transfer to such bank account as Customer may specify in writing).</p> <p>Customer agrees that under no circumstances will the total maximum Service Level Credits: (i) for any one month, exceed 100% of the Service Fee for that month; and, (ii) for any given contract year, exceed in the aggregate an amount equal to one- third of the annual Service Fee charged for the contract year (or one third of the total Service Fee charged if the Term as defined in the applicable Order Form is less than one (1) year). Customer acknowledges that the Service Level Credits defined hereunder are the sole remedy for SAP's failure to meet the specified Service Level.</p> <p><b>5.6 Termination for Service Level Failure</b></p> <p>Customer may terminate the applicable Order Form with thirty (30) day's termination notice in writing to SAP, if SAP misses a Service Level as specified in this Supplement for three (3) months in sequence. Customer may exercise this termination right only within thirty (30) days after receipt of the respective Service Level report that documents the applicable Service Level failure that would cause such termination right to accrue in Customer.</p> |
|  | Hybris     | SAP isn't likely to go out of business in the near future. However, our contract states the following: Upon expiration or termination of the Agreement, SAP may destroy or otherwise dispose of any of Customer Data in its possession unless SAP (i) is requested by Customer to extend the term of the Order Form as permitted in the Order Form to allow Customer to retrieve Customer Data, or (ii) receives, no later than thirty (30) days after the effective date of the termination of this Agreement, a written request for the delivery to Customer of the then most recent back-up of the Customer Data. SAP shall use reasonable commercial efforts to deliver the back-up to Customer within thirty (30) days of its receipt of such a written request, provided that Customer has, at that time, paid all fees and charges outstanding and owed at termination. Customer shall pay all reasonable fees and expenses incurred by SAP in returning or disposing of the Customer Data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

In North America the sites are currently located in San Jose, California and Sterling, VA. In Europe the sites are located in St. Leon-Rot, Germany and Amsterdam, Netherlands. The act of failing over from one site to another has a design goal for its Recovery Time Objective (RTO) of no more than four hours. The design goal for the Recovery Point Objective (RPO) is five minutes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

SAP shall follow its archiving procedures for Customer Data as set out in the SAP Hybris Commerce, cloud edition Services Description. In the event of any loss or damage to Customer Data, SAP shall use commercially reasonable efforts to restore the lost or damaged Customer Data from the latest back-up of such Customer Data maintained by SAP in accordance with the archiving procedure described in its SAP Hybris Commerce, cloud edition Services Description. SAP shall not be responsible for any loss, destruction, alteration or disclosure of Customer Data caused by any third party, (except those third parties sub-contracted by SAP to perform services related to Customer Data maintenance and back-up).</p> <p>Both IDS and IPS are included the SAP Hybris Commerce, Cloud Edition. The security infrastructure includes firewall security and hardened security policies on all servers. Log management procedures are in-place for log review for firewall, applications, network devices, including file-integrity management. SAP Hybris utilizes technologies from leading security firms for Log Management and File Integrity Management. SAP Hybris employs two-factor authentication across its network. SAP Hybris undergoes vulnerability and penetration testing. SAP Hybris validates against requirements for PCI DSS 2.0.</p> <p>The infrastructure also includes Web Application Firewalls and DDoS Mitigation Services.</p> <p>In addition, security policies and change management policies are in-place ensuring that all access and changes to customer systems and information is accessible only by SAP Hybris staff with access authorization.</p> <p>Security of the software application which is controlled by the Customer (or its implementation partner) remains the responsibility of the Customer.</p> <p>Upon expiration or termination of the Agreement, SAP may destroy or otherwise dispose of any of Customer Data in its possession unless SAP (i) is requested by Customer to extend the term of the Order Form as permitted in</p> |

| FireEye      | FireEye has a mature and documented Business Continuity Plan and Disaster Recovery Plan that follows industry best practices that is reviewed and tested annually. The BCP/DRP plan has RPO/RTO timing criteria and other critical business requirements that is available for review if requested in the future.                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| VirtueStream | Basic Plus microVM's are designed for mission-critical workloads and for systems that require DR, addition of reserved compute capacity in a secondary datacenter (i.e. Reserve uVM) and automatic storage replication to facilitate the ability to restore operations in the event of an outage at the primary data center. RPO and RTO for core microVM's are 15 minutes and 2 hours respectively. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

e. Describe your Recovery Point Objective (RPO) and Recovery Time Objective (RTO).

|        |                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                  |

HANA Database<br>RTO - 12 hours, RPO - 30 minutes<br>2. Sybase ASE Database<br>RTO - 12 hours, RPO - 30 minutes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|            | Hybris                                                                                                                                                                                                                                                                                   | In the case of catastrophic failure to your primary production data center, we offer anywhere from best efforts to enhanced DR solutions. Enhanced DR options translates to either RTO of 8 hours and RPO of 1 hour for a warm standby solution, or RTO of 30 minutes to RPO of 30 minutes for a hot-site. Customers have 3 choices in DR sites:<br><ul style="list-style-type: none"> <li>• as part of our base offering, best effort DR, we would bring your site back up in an alternate datacenter which is a minimum of 500 miles away from the primary datacenter. We would actually push your project server images to the alternate datacenter, but we would still need to set up your various interfaces, 3rd party services, etc, which could day a few days.</li> <li>• 2nd would be to have your DR site managed by hybris Managed Services.</li> <li>• 3rd would be to use your own DC as a DR site, We would need to set up a technical call with our combined teams to synch up on the replication strategies.</li> <li>• Our DR services utilizes VMware Site Recovery Manager with storage-based replication.</li> <li>• For enhanced DR, we would include one annual DR test, but more can be added if required. It also includes a customer specific DR and Business Continuity plan.</li> </ul> |
|            | SuccessFactors                                                                                                                                                                                                                                                                           | Within the contract/subscription agreement, there are provisions for data recovery in the event of disaster. SLA's for RTO (Recovery Time Objective) and RPO (Recovery Point Objective) are defined in the contract. We will prioritize data recovery based upon our contractual obligations for each customer, concerning RTO and RPO.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| VMware       | <p>VMware IaaS Services<br/>Provide the RPO and RTO for DR, point to SLAs for others.<br/>RTO – 4 hours or less<br/>RPO – 15 minutes to 24 hours – time is configurable by user but there is a bandwidth consideration for shorter replication times.</p> <p>VMWare AirWatch<br/>AirWatch Business Continuity (BC) and Disaster Recovery (DR) strategies include data and hardware redundancy, network configuration redundancy and backups, and robust, regular testing exercises.</p> <ul style="list-style-type: none"> <li>• Business Continuity – Our BC recovery strategies for support and maintenance include provisions for workforce mobility, secondary support locations, and defined leadership roles and responsibilities for all recovery staff. <ul style="list-style-type: none"> <li>o Multiple Support Locations – AirWatch maintains a Global Support Team, which spans multiple offices around the world. This ensures that if a disaster occurs at one of our offices, our remaining Support Team members can provide assistance to our customers.</li> <li>o Mobile Workforce – Should an AirWatch office become inaccessible, all AirWatch employees are equipped with laptops and can access necessary internal resources.</li> <li>o Defined Leadership – During a disaster, roles and responsibilities are assigned to key personnel, and a recovery manager provides leadership and documents the continuity process. Additionally, emergency contact numbers for key personnel are provided for all vendors and support staff.</li> </ul> </li> <li>• High Availability and Disaster Recovery – AirWatch features active-passive configurations for high availability and redundancy with all components made to failover with minimal downtime. Load balancing capabilities are deployed across multiple data centers to ensure immediate server pick up, ensuring zero end user downtime. AirWatch also incorporates replication technology featuring SQL log shipping or network SAN byte replication to prevent data loss.</li> </ul> <p>Due to FOIA restrictions and the competitive nature of the EMM marketplace, we cannot provide specific details regarding recovery strategies or timelines.</p> |
| FireEye      | <p>FireEye has a mature and documented Business Continuity Plan and Disaster Recovery Plan that follows industry best practices that is reviewed and tested annually. The BCP/DRP plan has RPO/RTO timing criteria and other critical business requirements that is available for review if requested in the future.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| VirtueStream | <p>Virtustream's solution will have a Recovery Point Objective (RPO) of 2 Hours and Recovery Time Objective (RTO) of 30 Minutes for all disaster recovery enabled workloads.</p> <p>The Virtustream Cloud has been designed to deliver continuous operations. The platform is architected to be highly available, with SLAs as up to 99.99%. All infrastructure systems are run in at least an N+1 model and have been designed with no single points of failure. All of the data center facilities and infrastructure has redundant power supplies connected to separate circuits from separate power feeds. Every device is connected via redundant pathways at a LAN/SAN/WAN layer.</p> <p>State of Utah can choose any of our FedRAMP Data Centers to host their applications and the DR location. For illustrative purposes, we have assumed the primary data center will be USDC02 and DR data center would be USDC01.</p> <p>The State of Utah solution has been designed with all workloads running in our San Francisco (USDC02) data center. In the unlikely event of a disaster at the USDC02 facility, State of Utah's production services will be brought back online in the secondary data center located in Northern Virginia (USDC01). The target RPO is 30 minutes for virtual machines with a 2 hour RTO. All production workloads in the primary node will have reserved compute capacity in the secondary node when deployed using Reserve μVMs and replicated storage. All virtual machine disaster recovery services are based on storage replication. The primary and secondary data centers are interconnected by diverse private 10 Gbps Sonet rings from separate Tier 1 providers – AboveNet and Level 3. Data is replicated asynchronously and continuously between the two data centers.</p>                                                                                                                                                                                                                                                                                                                                                                                                                |

Virtustream also performs backups on a nightly basis and replicated offsite for further protection. The retention policies are determined by State of Utah per landscape and will be documented during the on-boarding process.

**Figure 2. Integrated Disaster Recovery**

Virtustream's cloud platform includes integrated disaster recovery (30 Min RPO & 2 Hr RTO) and backup.

## 8.8.2 Describe your methodologies for the following backup and restore services:

### a. Method of data backups

|            |                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|            | MAA                                                                                                                                                                                                                                                                                                                                           | Backups are stored on disk only, sync'd between data centers for DR purposes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | CA Agile                                                                                                                                                                                                                                                                                                                                      | Full database backups are taken once per week, both to onsite and offsite (our warm data center, not a separate 3rd party) systems. Incremental backups are run nightly. Backups are retained for 21 days after which time they are simply aged out and over-written.<br><br>In addition, snapshots of database transactions are taken every hour to an disaster recovery site allowing for emergency disaster recovery with maximum of 1.5 hours of data loss due to catastrophic onsite failure (fire in cage, natural disaster, etc. at data center). Backups are tested monthly and a full disaster recovery process to the offsite application cluster is tested semi-annually. |
|            | ASM                                                                                                                                                                                                                                                                                                                                           | Backups are stored on disk only, sync'd between data centers for DR purposes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Google     | Keeping in mind that Google stores customer data in encrypted chunks or shards on several servers at several data centers backups should not be considered customer specific. Daily backups of each server are performed to encrypted tapes at each data center.                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Virtu      | We perform live database replication to a separate redundant database in Oregon and offline as well in a separate Amazon AWS Region                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Salesforce | Customer data, up to the last committed transaction, is replicated to disk in near-real time at the designated disaster recovery data center, backed up at the primary data center, and then cloned to the disaster recovery data center. Disaster recovery tests verify our projected recovery times and the integrity of the customer data. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|            | <p>Backups are performed daily at each data center facility without stopping access to the application. Backup cloning is transmitted over an encrypted network (our MPLS network across all data centers). Tapes never leave our secure data center facilities, unless they are to be retired and destroyed through a secure destruction process.</p> <p>The backup retention policy is 90 days (30 days for sandboxes). Deleted / modified data cannot be recovered after 90 days (30 days for sandboxes). If customers want a longer retention, they can use the weekly export feature available in the system.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| ServiceNow | <p>While Advanced High Availability as described in 8.8.1 is the primary means to recover data and restore service in the case of a service disruption, in certain cases it is desirable to use ServiceNow's more traditional data backup and recovery mechanism. This data backup and recovery system works in concert with AHA and acts as a secondary recovery mechanism.</p> <p>ServiceNow stores production instances in two geographically separate regional data centers, with sub-production instances hosted in a single data center. Backups of the two production databases and the single sub-production database are taken everyday for all instances throughout the private cloud infrastructure.</p> <p>The backup cycle consists of four weekly full backups and the past 6 days of daily differential backups that provide 28 days of backups. All backups are written to disk, no tapes are used and no backups are sent off site. All the controls that apply to live customer data also apply to backups. If data is encrypted in the live database then it will also be encrypted in the backups.</p> <p>Regular, automated tests are run to ensure the quality of backups. Any failures are reported for remediation within ServiceNow.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| QTS        | <p>QTS operates and manages high-performance, multi-tenant platforms on which customer system and data file backups can be created and retained for rapid restore of files/volumes. Data can be stored on tape or disk, depending on QTS location, and can reside locally in a QTS data center or off-site. If there is a need for off-site data retention, the backup medium is tape. QTS can also replicate the backed up data from the primary site to a secondary (remote) site to address geographically remote storage and DR requirements.</p> <p>Secure: QTS utilizes a separate, secure gigabit backup network with private VLAN security. Physical security is monitored using a priority badge access system to limit access to the tape libraries, disk arrays, servers, and network infrastructure. From the application, the backup software controls access to the data stored on tape, and access security is limited to QTS staff only.</p> <p>Scalable: QTS backup systems are highly scalable, and capacity can be quickly added as needed.</p>                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

This is done using EMC Networker for backup and administration. The backups on Site A are also replicated to remote Site B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

These are all standard and provided as part of our hosted service. All backups are stored on disk in the primary and backup data center facilities for 30 days.</p> <p>Database backups are encrypted and stored at a customer's "primary" location, as well as the "alternate" warm-site location for redundancy and disaster recovery purposes. If the customer's primary location is defined as the data center in Amsterdam, NL, then copies of their database would be encrypted and streamed in a secure manner to the data center based in St Leon-Rot, DE, and vice versa. The backup is stored on Storage Area Network systems encrypted with AES-256 bit by encryption appliance. Backups are retained for 30 days. Our Log File Retention Policy is designed to meet or exceed the most stringent industry standards. Archiving of data is the customer's responsibility.</p> |
| VMware | <p>VMware will provide the following services to participating entities with respect to Data Recovery:</p> <ul style="list-style-type: none"> <li>•Data protection, such as routine backups, for the vCloud Air infrastructure, including top-layer management and user-management interfaces owned and operated by VMware.</li> <li>•Data and infrastructure restoration for the vCloud Air infrastructure, including top-layer management and user-management interfaces owned and operated by VMware.</li> </ul> <p>Participating entities will be responsible for the following services with respect to Data Recovery:</p> <ul style="list-style-type: none"> <li>•Data protection, such as routine backups, for the data and content accessed or stored on vCloud Air virtual machine's or storage devices, configuration settings, etc.</li> <li>•Data, content, virtual machine and configuration restorations for assets accessed or stored on your vCloud Air account.</li> </ul> <p>Data Protection is an optional service that provides secure, image-based backup and recovery capabilities that enable you to protect important virtual machine data and content hosted in your vCloud Air IaaS environment. Through the Data Protection administration interface available in the vCloud Air Console, vApps and their virtual machine members can be selected for policy-based backup and recovery operations.</p> <p>Data Protection feature subscription and activation may be requested via My VMware and is subject to additional service fees based on the amount of backup data capacity. Backup data capacity for the service is measured in front end terabytes (FETB). Once activated, vApps and their virtual machine members may be registered and unregistered with Data Protection features on a self-service basis through the vCloud Air Console.</p> <p>As part of this service, VMware will:</p> <ul style="list-style-type: none"> <li>•Implement and maintain central service components (backup software appliances, backup and archival storage media and associated network topologies) needed to support Data Protection features.</li> <li>•Perform routine configuration, maintenance and optimization services on behalf of the Data Protection environment and in conformance with industry best practices.</li> </ul> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| QTS        | <p>Your data storage requirements are growing exponentially and a scalable comprehensive solution for storage and data protection is absolutely necessary in today's marketplace. Implementing and managing this necessary storage infrastructure to meet both your application and compliance requirements can be extremely time consuming and costly.</p> <p>Outsource your storage needs to QTS. With our portfolio of high-performance and cost-effective managed storage services, your data will be secure and guaranteed to be available when you need it. By leveraging market leading hardware and software, coupled with certified processes and personnel, QTS delivers dependable, auditable solutions.</p> |                                                                                                                                                                    |

The frequency in which the backup is executed varies for each of the components mentioned above. This depends on the standard HEC service schedules and the service levels agreed on with the customer. |
| VMware | <p>VMware will provide the following services to participating entities with respect to Data Recovery:</p> <ul style="list-style-type: none"> <li>•Data protection, such as routine backups, for the vCloud Air infrastructure, including top-layer management and user-management interfaces owned and operated by VMware.</li> <li>•Data and infrastructure restoration for the vCloud Air infrastructure, including top-layer management and user-management interfaces owned and operated by VMware.</li> </ul> <p>Participating entities will be responsible for the following services with respect to Data Recovery:</p> <ul style="list-style-type: none"> <li>•Data protection, such as routine backups, for the data and content accessed or stored on vCloud Air virtual machine's or storage devices, configuration settings, etc.</li> <li>•Data, content, virtual machine and configuration restorations for assets accessed or stored on your vCloud Air account.</li> </ul> <p>Data Protection is an optional service that provides secure, image-based backup and recovery capabilities that enable you to protect important virtual machine data and content hosted in your vCloud Air IaaS environment. Through the Data Protection administration interface available in the vCloud Air Console, vApps and their virtual machine members can be selected for policy-based backup and recovery operations.</p> <p>Data Protection feature subscription and activation may be requested via My VMware and is subject to additional service fees based on the amount of backup data capacity. Backup data capacity for the service is measured in front end terabytes (FETB). Once activated, vApps and their virtual machine members may be registered and unregistered with Data Protection features on a self-service basis through the vCloud Air Console.</p> <p>As part of this service, VMware will:</p> <ul style="list-style-type: none"> <li>•Implement and maintain central service components (backup software appliances, backup and archival storage media and associated network topologies) needed to support Data Protection features.</li> <li>•Perform routine configuration, maintenance and optimization services on behalf of the Data Protection environment and in conformance with industry best practices.</li> <li>•Allocate requisite backup storage based on capacity selections made at the time of subscription enrollment.</li> <li>•Guarantee storage locality per geographical region for all backup data.</li> <li>•Provide necessary Data Protection service reporting as it is requested.</li> </ul> <p>Participating entities will be responsible for:</p> <ul style="list-style-type: none"> <li>•Subscribing to Data Protection as an add-on feature via My VMware and selecting an amount of backup storage capacity commensurate with your requirements.</li> <li>•Creating custom backup protection policies that may include, but are not limited to: affinity settings per VDC, scheduling, and retention periods.</li> <li>•Registering and unregistering individual vApps and their virtual machine members for scheduled backups using Data Protection.</li> </ul> |                                                                                                                                                                                                                                                                                                             |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Virtru     | All backup storage is hosted in two separate cloud storage regions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                  |
| Salesforce | Backups are performed daily at each data center facility without stopping access to the application. Backup cloning is transmitted over an encrypted network (our MPLS network across all data centers). Tapes never leave our secure data center facilities, unless they are to be retired and destroyed through a secure destruction process.                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                  |
| ServiceNow | Please see our response to 8.8.2a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                  |
| QTS        | <p>Managed Tape Rotation and Off-site Storage</p> <p>This service provides off-site storage for data backup, and helps many customers who must store data separately from a primary IT site to comply with various laws and regulations. QTS has contracted Iron Mountain — a nationally recognized leader in off-site data storage services — to move the data storage media (tapes) to and from a secure, off-site location. The service enables data security, integrity, and restoration in the event of an outage. Off-site data storage via tape ensures that a customer's information is securely stored in multiple locations. In the event of an emergency, QTS and Iron Mountain deliver the customer's media back to their IT environment or wherever they request delivery.</p> |                                                                                                                  |
|            | <p>Secure: QTS staff adheres to storage-industry best practices and security procedures. QTS facilities have earned SSAE16-SOC1 accreditations. All media is maintained in a secure environment and locked in secure media containers during transition from the QTS environment to the off-site storage location.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                  |
|            | <p>Compliance and Tracking: QTS's partnership with Iron Mountain provides the ability to offer logging and tracking information about the customer's off-site media via the SecureSync Web portal.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                  |

|            | CA Agile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | We have a hot/warm data configuration with both data centers located within the US but ~1300 miles apart. |
|            | ASM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | ASM has a warm standby with near time data replication between the data centers.                          |
| Google     | <p>Google does not use the N+1 data center assignment due to the risk of cascading failures. Google's infrastructure makes a dynamic decision for each unique login session which data center is the closest, most highly available data center and which data centers will be used as secondary and tertiary. This assignment would shift for that session throughout the day based on availability and is done completely seamless to the end user.</p>                                                                                                                                                                                                                                                                                                                      |                                                                                                           |
| Virtu      | We utilize multiple availability zones in AWS, and backup all data stored in our database to separate datacenters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                           |
| Salesforce | <p>Customer Data for customers in Salesforce's Government Cloud is stored in two of our U.S. data center locations.</p> <p>The Salesforce service performs near real-time replication at each data center and annual disaster recovery tests for the service verify the projected recovery times and data replication between the production data center and the disaster recovery center. The disaster recovery site is a 100% replica of the primary production site of capacity (host, network, storage, data). Data is transmitted between the primary and disaster recovery data centers across encrypted links. Additionally, back-ups of data are performed and data is retained on backups at the geographically separated disaster recovery data center location.</p> |                                                                                                           |
| ServiceNow | Please see our response to 8.8.2a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                           |

Equinix (Our primary data center) is located in San Jose, California and our disaster recovery site is located at CenturyLink Data Center in Sterling, Virginia. The act of failing over from the main data center to the recovery site data center has a design goal recovery time objective (RTO) of four hours. The design goal Recovery Point Objective (RPO) is five minutes.</p> <p>In the event of a fail-over to the disaster recovery site location, all URLs that customers use to reach the San Jose data center will continue to work. We will notify customers via their email addresses in the event of unplanned downtime.</p> <p>Internally, we use a documented system recovery plan that outlines the approach and steps for recovering the applications.</p> <p>The document defines roles and responsibilities in the event of disaster:<br/>Local staff maintains the hardware remotely<br/>We maintain the application software<br/>Processes are in place to keep database and file servers in sync between primary and backup data centers<br/>In the event of a catastrophe, we will declare the primary data center ""down"" and our local staff will follow a script to start the applications at the remote data center<br/>We test power outage backup scenarios and the Disaster Recovery Plan on a periodic basis.</p> |

Customers have 3 choices in DR sites:</p> <ul style="list-style-type: none"> <li>• as part of our base offering, best effort DR, we would bring your site back up in an alternate datacenter which is a minimum of 500 miles away from the primary datacenter. We would actually push your project server images to the alternate datacenter, but we would still need to set up your various interfaces, 3rd party services, etc, which could day a few days.</li> <li>• 2nd would be to have your DR site managed by hybris Managed Services.</li> <li>• 3rd would be to use your own DC as a DR site, We would need to set up a technical call with our combined teams to synch up on the replication strategies.</li> <li>• Our DR services utilizes VMware Site Recovery Manager with storage-based replication.</li> <li>• For enhanced DR, we would include one annual DR test, but more can be added if required. It also includes a customer specific DR and Business Continuity plan.</li> </ul> |
|              | SuccessFactors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Each client has a designated primary and backup data center which is geographically separated as well as existing on different power and telecommunications grids.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| VMware       | <p>Customers can purchase Rackware to provide geographical HA and COOP, but this service is not provided as a core capability of vCA or vCGS. VMware AirWatch</p> <p>AirWatch backs up the production environment from the primary US data center to the secondary US data center. Due to FOIA restrictions and the competitive nature of the EMM landscape, we cannot provide additional backup scheduling or image security procedures.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| FireEye      | All backup and restore procedures are in compliance with SOC 2 specifications. Data and server images are backed up digitally and replicated to datacenters in geographically different locations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| VirtueStream | <p>State of Utah can choose any of our FedRAMP Data Centers to host their applications and the DR location. For illustrative purposes, we have assumed the primary data center will be USDC02 and DR data center would be USDC01.</p> <p>The State of Utah solution has been designed with all workloads running in our San Francisco (USDC02) data center. In the unlikely event of a disaster at the USDC02 facility, State of Utah's production services will be brought back online in the secondary data center located in Northern Virginia (USDC01). The target Recovery Point Objective (RPO) is 30 minutes for virtual machines with a 2 hour Recovery Time Objective (RTO). All production workloads in the primary node will have reserved compute capacity in the secondary node when deployed using Enterprise Reserve μVMs and replicated storage. All virtual machine disaster recovery services are based on storage replication. The primary and secondary data centers are interconnected by diverse private 10 Gbps Sonet rings from separate Tier 1 providers – AboveNet and Level 3. Data is replicated asynchronously and continuously between the two data centers. Virtustream also performs backups on a nightly basis and replicated offsite for further protection. The retention policies are determined by State of Utah per landscape and will be documented during the on-boarding process.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## 8.9 Data Protection

8.9.1 Specify standard encryption technologies and options to protect sensitive data, depending on the particular service model that you intend to provide under this Master Agreement, while in transit or at rest.

|    |     |                                                          |
|----|-----|----------------------------------------------------------|
| CA | APM | All data is encrypted via TLS Mutual Auth during transit |
|----|-----|----------------------------------------------------------|

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                       |

|            | <p>respective uses of the Salesforce services. Salesforce believes that these provide its customers the flexibility to comply with laws with stringent privacy and security requirements.</p> <p><b>Data In Motion</b><br/>All transmissions between the user and the Salesforce Services are TLS encrypted with a 2048-bit Public Key. The Services use International/Global Step Up TLS certificates, with AES 256-bit encryption by default.</p> <p><b>Data At Rest</b><br/>Salesforce includes a feature to encrypt custom text fields (ECF):<br/>The fields can be masked appropriately for specific data types (i.e., credit card number, Social Security Number, National Insurance Number, Social Insurance Number).<br/>Access to read the masked parts of the fields is limited by the ""View Encrypted Data"" permission, which is not enabled by default.<br/>Customers can manage their encryption key based on their organization's security needs and regulatory requirements.<br/>Encrypted fields are encrypted with 128-bit keys and use the AES (Advanced Encryption Standard) algorithm.</p> <p><b>Additional Salesforce Encryption Capabilities</b><br/>Apex Code extends the powerful and proven success of the Force.com platform by introducing the ability to write code that runs on Salesforce servers. This language makes possible the development of a new class of application and features deployed entirely on demand. Using Apex, your Agency can create user interface classes that utilize the Apex crypto class to encrypt field level data up to AES 256-bit encryption.</p> <p><b>Third Party Encryption Solutions (Additional License Option)</b><br/>Should additional encryption be required, third party solutions such as CipherCloud, Skyhigh, and PerspecSys are available on the Salesforce AppExchange. These solutions offer data loss prevention, user activity and monitoring, malware protection, as well as data protection with encryption and tokenization. Data can be encrypted and masked at rest, keys managed and stored in Salesforce, and compliance controls to prevent unauthorized access to data and keys.</p> |
| ServiceNow | <p>ServiceNow makes use of encryption for both data in transit and data at rest. ServiceNow provides optional capabilities with regard to the encryption of data at rest within the system, which customers can apply at their own discretion.</p> <p><b>Encryption in Transit</b><br/>ServiceNow customers access their instances over the Internet using forced Transport Layer Security (TLS) encryption (AES128/256) for all user access. The level of encryption is based on the browser and must be configured by the customer as ServiceNow does not modify any browser settings. All attempts to access ServiceNow over HTTP are redirected to HTTPS.</p> <p><b>Integration Encryption</b><br/>For integrations such as LDAP and Web Services, ServiceNow provides customers with the ability to encrypt traffic. LDAP can be configured to run over SSL, this requires customers to provide a certificate for the specific LDAP server. Certificates may also be stored within an instance to allow encrypted transmission for Web Services integrations. FTPS and SCP can be used as file transfer methods to securely transfer files to ServiceNow.</p> <p><b>Email Encryption</b><br/>Customers may configure their instance to generate emails to their users from the instance. ServiceNow provides the capability to receive email over TLS. Customers are able to configure their</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|          | <p>email system to send email to ServiceNow over TLS and ServiceNow will receive that email over TLS.</p> <p>Encryption at Rest</p> <p>ServiceNow can provide three types of encryption for data at rest that are implemented by the customer or by customer request in the case of edge encryption and dedicated hardware.</p> <ul style="list-style-type: none"> <li>•Column encryption of customer added fields and attachments: Provides data encryption using AES128/256 or 3DES symmetric key encryption. The customer provides the keys for this encryption. Data stored in these fields cannot be searched or reported on and this does not support out of the box fields.</li> <li>•Edge Encryption Proxy: With optional additional cost Edge Encryption, the customers create and control their encryption keys within their own network. Edge Encryption includes a proxy application that resides in a customer's network. This encrypts data before it is sent (also encrypted in transit) from the customer's environment to the ServiceNow instance. The data always remains encrypted whilst stored in the instance and the data along with the keys and the encryption configuration is never accessible by ServiceNow. Requests for encrypted data must also be made through the proxy application and is therefore decrypted only within the customer's network before being sent to their end users client browser. Please note that data encrypted with Edge encryption cannot be used by back-end scripts or processes and searching and reporting behavior is also modified through its use.</li> <li>•Full disk encryption: Provides via self-encrypting hard drives with AES256 bit encryption. This encryption capability is only available through the purchase of dedicated ServiceNow hardware at an additional cost. This delivers "at-rest" protection only and is focused solely on preventing data exposure through the loss or theft of hard disks holding customer data.</li> </ul> <p>Wherever possible, ServiceNow leverages existing FIPS 140-2 certified technologies.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

We encrypt only PCI-DSS data in the database where appropriate and in support of PCI-DSS compliance. All backup media is encrypted using AES 256-bit cipher prior to transporting to off-site storage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

Application security is handled through a combination of programming checks, application server configuration, and database server configuration. Fieldglass uses 2048-bit SSL (HTTPS) encryption for all data transmissions over the public Internet, including data shared between the product and end users and data shared between the product and back-end systems. Data is decrypted on the internal VLAN to allow IDS monitoring. Passwords are hashed using a one-way hash based on the SHA-256 encryption algorithm. The hash value is saved within the database; not the password.</p> <p>The base Fieldglass application does not require data that would require breach notifications if compromised. While customers should not store sensitive personal data, custom fields may be defined by the customer that can be encrypted with AES-256 to capture any pertinent and permissible data points. These fields can also be optionally masked from view while entering and viewing the fields in the application.</p> |

Further encryption capabilities are available through the hybris Advanced Security Module (optional).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|         | SuccessFactors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>All data in the system is treated as highly sensitive information. The application and infrastructure offers Strong Encryption, Encryption in Transit and Encryption at Rest, including the following (some of these are options that are not included in the base services):</p> <p>Transport Layer Security (TLS) technology, consisting of a public key and a private key, to protect sensitive information. The public key is used to encrypt information and the private key is used to decipher it. When a Web browser points to a secured domain, a handshake authenticates the server (website) and the client (browser). An encryption method is established with a unique session key. Customers may then begin a secure session that facilitates message privacy and integrity.</p> <p>Hitachi SAN storage arrays provide a reliable safe, secure data storage environment. We use AES-256 bit encryption to secure data at the block level of our storage systems.</p> <p>Backups are performed "disk to disk". Data is transported over 3DES VPN and stored on encrypted disk using Data Domain replication technology</p>                                                                                                                             |
| VMware  | <p>VMWare IaaS Services</p> <p>Data in transit will be encrypted based upon the customers selected method of transport (SSL or IPSEC VPN).</p> <p>Data at rest encryption is the responsibility of the customer. By example HyTrust is an endpoint encryption choice for many vCloud Air customers.</p> <p>VMWare AirWatch</p> <p>AirWatch leverages strong, non-proprietary encryption algorithms to protect applicable data at rest and in transit. Due to FOIA restrictions and the competitive nature of the EMM landscape, we cannot provide specific encryption algorithms and protocols.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| FireEye | Each of the FireEye offered solutions have their own implementations and practices concerning encryption:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|              | <p>1.Email Threat Prevention (ETP)<br/>ETP offers TLS encryption support for data in transmission. ETP only stores email found to contain malware or malicious content and does not encrypt this data.</p> <p>2.Mobile Threat Prevention (MTP)<br/>All data in transit is protected using standard TLS encryption. The database itself is not encrypted. However, all systems are under strict security and access control rules, in compliant with SOC 2 regulations.</p> <p>3.Threat Analytics Platform (TAP)<br/>All data in-transit between a customer environment and TAP instance in Amazon AWS is encrypted with a 256-bit Twofish key. No customer data is stored on disk, however data stores leverage Amazon AWS S3 encryption settings.</p> <p>4.FireEye as a Service (FaaS CV)<br/>FireEye appliance communications, and FireEye as a Service (FaaS) non-person entity (NPE) secured inter-process communications employs industry standard HTTPS encrypted web interfaces, and multifactor SSH management access for the end-to-end protection of sensitive customer data. In addition, FaaS communicates with FireEye appliances with additional layers of protected symmetric key exchanges protecting and establishing encrypted channels for inter-device information.</p> |
| VirtueStream | <p>Encryption keys are generated at the time of backup application install on the Client VM(s). Encryption keys are at least AES-128 but can be AES-256. Keys are stored on the backup system databases using the encryption key management tool. The data about the keys on the database is in an unreadable format and cannot be decrypted.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

8.9.2 Describe whether or not it is willing to sign relevant and applicable Business Associate Agreement or any other agreement that may be necessary to protect data with a Purchasing Entity.

Carahsoft would be willing to sign Business Associate Agreements or similar agreements that are set forth with a purpose of protecting customer data.

8.9.3 Offeror must describe how it will only use data for purposes defined in the Master Agreement, participating addendum, or related service level agreement. Offeror shall not use the government data or government related data for any other purpose including but not limited to data mining. Offeror or its subcontractors shall not resell nor otherwise redistribute information gained from its access to the data received as a result of this RFP.

Agreed and understood. Carahsoft and its' subcontractors will not use any government data for purposes other than those outlined within the frameworks of this contract.

## 8.10 Service Level Agreements

8.10.1 Offeror must describe whether your sample Service Level Agreement is negotiable. If not describe how it benefits purchasing entity's not to negotiate your Service Level Agreement.

| Salesforce | <p>Salesforce does not typically offer Service Level Agreements as part of the base service offering. Our approach is to offer a service with high availability and fast resolution of problems. If a customer requires an SLA it will be negotiated separately.</p> <p>The persistence layer underlying Salesforce Platform is proven database technology that powers all of Salesforce's products today, serving more than 150,000 organizations and over 4 billion transactions per day with an average request response time of less than .25 seconds all with an average up time of 99.9+ percent.</p> <p>Salesforce uses commercially reasonable efforts to make its on-demand services available to its customers 24/7, except for planned downtime, for which Salesforce gives customers prior notice, and force majeure events. Excellent availability statistics are critical to Salesforce's customers' success and to the success of Salesforce as a company. Live and historical statistics on the Salesforce system performance are publicly published at <a href="http://trust.salesforce.com/trust/status">http://trust.salesforce.com/trust/status</a>.</p> <p>Salesforce has maintained high levels of availability across all Salesforce instances since inception. As the only on-demand vendor to provide daily service-quality data on a public Web site (<a href="http://trust.salesforce.com">http://trust.salesforce.com</a>), Salesforce proves that we are the leader in availability. And by making its track record completely transparent, Salesforce proves we are worthy of our customers' trust. To ensure maximum uptime and continuous availability, Salesforce provides the best redundant data protection and most advanced facilities protection available, along with a complete data recovery plan—all without affecting performance.</p> |                                                                                                                                                                                                                                                                                                                                                                                                 |
| ServiceNow | <p>ServiceNow's SLA is not negotiable. ServiceNow delivers the same level of world-class support to all customers as described in the "Subscription Service Guide" included with this response.</p> <p>ServiceNow's homogeneous private cloud environment where all applications are on a single platform offers ServiceNow a competitive advantage in being able to concentrate its efforts to make the customer's user experience the best possible.</p> <p>The ServiceNow environment is a private cloud, fully owned and operated by ServiceNow. ServiceNow's experience &amp; understanding of its private cloud and the benefits provided by a consistent infrastructure and standardized processes allow it to provide a high level of security, availability, and performance in a cost effective and reliable manner.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                 |
| Docusign   | Yes SLA's can be modified per contractual agreement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                 |
| SAP        | Ariba                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Our SLAs are not negotiable. As mentioned above, the SAP Ariba Cloud Service Level Agreement includes a 99.5% uptime.                                                                                                                                                                                                                                                                           |
|            | Fieldglass                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Our SLA is designed to (i) meet the expectations of our customers and (ii) fit with our operational protocols and capabilities. Because of this our ability to make significant changes to the SLA is limited. However, we are always willing to work with a customer to try and determine how our SLA can address a particular business.                                                       |

Under our SLA, System Availability is 99.5% during each month for productive systems. Customers may claim a credit of 2% of Monthly Subscription Fees for each 1% below SLA (not to exceed 100% of Monthly Subscription Fees). This credit may be applied to a future invoice relating to Cloud Service that did not meet the System Availability SLA. |

|              | SuccessFactors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Our SLAs are not negotiable for Support. Under our SLA, System Availability is 99.5% during each month for productive systems. Customers may claim a credit of 2% of Monthly Subscription Fees for each 1% below SLA (not to exceed 100% of Monthly Subscription Fees). This credit may be applied to a future invoice relating to Cloud Service that did not meet the System Availability SLA. |
| VMware       | <p>VMware's SLAs are specific to the product or service, and are subject to the product's Terms of Service (which are also provided). The SLA is specific to the product rather than to the customer, to define the expected availability and recourse should the product not meet the stated availability levels. VMware's existing customers include Federal, State and Local government customers as well as commercial customers, who successfully utilize our products in accordance with the current SLA and Terms of Service and their applicable, mandatory laws and regulations. Accordingly, VMware is confident that the existing SLA meets the state and local government requirements, as it is being utilized currently.</p> <p>VMware IaaS Services</p> <p>To best work with our customers and improve our terms in alignment with market requirements, VMware is willing to review the terms of its SLA during negotiations of the Participating Addendum to identify how the existing SLA meets the state's applicable and mandatory laws and regulations. If it becomes apparent to the parties that it is necessary to revise VMware's SLA to comply with the state's applicable and mandatory laws, VMware will enter into discussions about how to best address these requirements</p> <p>VMware SaaS Services</p> <p>VMware AirWatch</p> <p>AirWatch Service Level Agreements are non-negotiable. AirWatch has a guaranteed uptime SLA of 99.9%. Please refer to the AirWatch Hosted Services Policy for additional information. VMware AirWatch acknowledges that if it is awarded a contract under the RFP that it will annually certify to the Lead State that it still meets or exceeds the mandatory minimum requirements and technical specifications of the RFP.</p> |                                                                                                                                                                                                                                                                                                                                                                                                 |
| FireEye      | SLAs are negotiable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                 |
| VirtueStream | Virtustream's Service Level Agreement is generally not negotiable. Our SLAs are one of the strictest in the market place. To change the SLA would mean either changing the design or create operational disruption and higher cost by engaging in non-standard processes and practices. For example, Virtustream's SLA for Tier 1 storage is 10 ms latency. For Virtustream to change this latency means changing the design for Tier 1 storage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                 |

8.10.2 Offeror, as part of its proposal, must provide a sample of its Service Level Agreement, which should define the performance and other operating parameters within which the infrastructure must operate to meet IT System and Purchasing Entity's requirements.

Below is a sample of Virtustream's Service Level Agreement:

#### SERVICE LEVEL FRAMEWORK

The service levels ("Service Levels") applicable to the Services specified in Sections 1 and 2 are set forth in Schedule B to this SD ("Service Levels for Cloud Platform Services"). The framework that governs all Service Levels is set forth in this Section.

#### Commencement of Service Levels

Commencing thirty (30) days from the Service Start Date (as set forth in the applicable Order Form), Virtustream's performance of the Services will meet each applicable Service Level. If Virtustream's performance of the Services

does not meet the applicable Service Level, then Virtustream will use commercially reasonable efforts to restore its performance to meet such Service Level.

#### Service Level Reports

Service Levels will be calculated and measured monthly by Virtustream on a calendar month basis and reported each month for the previous month. The reports will be provided to Customer by the tenth (10th) working day of the month following that to which such report relates, commencing on the second (2nd) month following the Service Start Date and each month thereafter. The monthly service level report will contain at least the following items: (i) Uptime statistics for the month concerned; (ii) an analysis of reported incidents over the previous month, broken down by type for discussion; (iii) action plans for items giving rise to concern; (iv) comments and observations on any issues arising from Virtustream's performance monitoring activities; (v) recommendations on service delivery strategies to maintain or enhance the service level; and (vi) review of general business requirements ("Service Level Report").

Cloud Platform Services (CPS) has its own specific service levels as described in this document. Cloud Cover Services (CCS) has service levels that pertain to the CCS offerings and are reported separately. Not all Virtustream customers have CCS but all Virtustream customers use CPS.

#### Service Level Review Meetings

Monthly Service Level review meetings will be conducted by Virtustream with Customer where the monthly Service Level report specified above will be discussed. If any of the Service Levels measured over the previous calendar month period is not achieved in that month, then Virtustream will include the steps taken to rectify the problem in the next monthly Service Level Report. In addition, the issue shall be an agenda topic for discussion at the next monthly service review meeting. Additionally, after restoring service or otherwise resolving any immediate problem as specified in this SD, if Virtustream fails to provide Services in accordance with the Service Levels, Virtustream shall:

- a. Promptly investigate and report on the causes of such problem;
- b. Provide a Root Cause Analysis of such failure as soon as practical after such failure or at Customer's request;
- c. Correct such problem that is Virtustream's fault or responsibility, as soon as reasonably practicable and coordinate the correction of such problem if Virtustream does not have responsibility for the cause of such problem.
- d. Advise Customer of the status of remedial efforts being undertaken with respect to such problem;
- e. Demonstrate to Customer's reasonable satisfaction that the causes of such problem (that is Virtustream's fault or responsibility) have been or shall be corrected on a permanent basis; and
- f. Take corrective actions to prevent any recurrence of such problem (that is Virtustream's fault or responsibility).

#### Root Cause Analysis

Promptly following Virtustream's failure to meet a Service Level, Virtustream will perform a root cause analysis to determine the reason for that failure. Upon Virtustream's determination of the cause of such failure, it will provide to Customer a preliminary report citing the cause of such failure. If Virtustream determines that the failure was due to Virtustream, an additional report will be provided that details the root causes of the failure, and which details any measures that should be taken to minimize the possibility that such failures will re-occur. Virtustream will correct the problem and use reasonable commercial efforts to minimize the re-occurrence of such failures.

#### Service Level Exceptions

Virtustream shall not be liable for any failure to meet the Service Levels, to the extent such failure was caused by one or more of the following:

- a. A failure of Customer or any of its employees, agents or contractors (including any of Customer's third party service providers) to perform any of its responsibilities under this SD;
- b. Any act or omission of Customer or any of its employees, agents or contractors (including Customer's third party service providers or other third parties acting on behalf of Customer);
- c. Any hardware, software or other product of a third-party or Customer equipment;
- d. Any failure of Customer to secure the proper access rights or maintenance and support services with respect to any component of the Services (e.g., hardware, software, network, maintenance) for which Virtustream does not bear operational responsibility;
- e. Downtimes resulting from a Virtustream's scheduled maintenance windows;
- f. Customer's reprioritization of the tasks to be performed by Virtustream where such reprioritization causes Virtustream to miss a Service Level;
- g. Viruses; provided that the infected Virtustream-provided system had virus protection for which the virus protection software updates were up to date;

- h. An election by Customer to purchase a base commitment that is not sufficient to run Customer's system (e.g., If a customer elects to size a  $\mu$ VM pool that is insufficient to run the designated workload);
- i. Issues occurring outside of standard working hours (as defined for business level customers) — for which the Service Level Objectives (SLOs) do not apply;
- j. Cloud Cover Services (CCS) offerings — for which the Service Level Objectives (SLOs) do not apply;
- k. Resolution delays due to lack of client response and/or Customer provided credential based information;
- l. Priority levels not agreed upon by both customer and supplier;
- m. Claims of performance degradation not substantiated through Customer provided diagnostic testing results.

### 8.11 Data Disposal

Specify your data disposal procedures and policies and destruction confirmation process.

The disposal of data will vary based on the type of service that is being provided to the Purchasing Entity by Salesforce. As an example, please see Salesforce response for disposal of government data: Data Disposal and Destruction

In the event of termination of the Salesforce service, requests by your Agency made within 30 days after the effective date of termination or expiration of the Subscription Agreement, Salesforce will make your data available to you for export or download. Once the export has been completed, an email will be sent to you containing a link where you can download a .zip file that contains multiple .csv (spreadsheets) files, each representing your Salesforce objects. Your data on disk is flagged within the database and set to inactive status or what can be referred to as a ""soft delete."" This data is no longer available or accessible to the application but is backed up in the full database backup process. The data remains in this state for 180 days; this is done in the event that the customer decides to resume services or needs the data for a legal reason. At 180 days, the data is marked for deletion (""hard delete"") and will be deleted after 30 more days. Once this ""hard delete"" is executed the customer data is physically deleted and non-recoverable from the database. Following the purge, the data will remain on backup for an additional 90 days prior to being overwritten and unrecoverable.

#### Media Sanitization

Salesforce has an established process for sanitizing media consistent with industry guidelines and consistent with NIST SP 800-88 Guidelines for Media Sanitization [MP-6].

### 8.12 Performance Measures and Reporting

8.12.1 Describe your ability to guarantee reliability and uptime greater than 99.5%. Additional points will be awarded for 99.9% or greater availability.

|    |          |                                                                                                                                                                                                                                                                                                                                                             |
|----|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CA | APM      | CA SaaS production environments have an SLA at 99.8% uptime calculated arrear monthly. 1hr response for P1 issues.                                                                                                                                                                                                                                          |
|    | MAA      | CA MAA SaaS production environments have an SLA at 99.8% uptime calculated arrear monthly. 1hr response for P1 issues.                                                                                                                                                                                                                                      |
|    | CA Agile | For Rally SaaS Unlimited Edition customers, our goal is to provide 99.9% up-time during each calendar quarter. If in any calendar quarter an up-time of 99.5% is not met and our customers were negatively impacted (for example, were unable to login to Rally), we will provide a service credit equal to one month of fees for use of the Rally Service. |
|    | ASM      | CA SaaS production environments have an SLA at 99.8% uptime calculated arrear monthly. 1hr response for P1 issues.                                                                                                                                                                                                                                          |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                    |

| Google     | Google Apps services will be operational and available to the customer at least 99.9% of the time in any calendar month. If Google does not meet the Google Apps SLA, the customer will be eligible to receive service credits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                    |
| AODocs     | Altirnao agrees to use commercially reasonable efforts to meet or exceed the Availability Service Level. The Availability Service Level means the Service is available for use by Users for not less than 99.5% of the time excluding the Exclusion Events (as defined below).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                    |
| Virtru     | Virtru provides the same SLA as Gmail                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                    |
| Salesforce | <p>Salesforce has maintained high levels of availability across all Salesforce instances since inception. As the only on-demand vendor to provide daily service-quality data on a public Web site (<a href="http://trust.salesforce.com">http://trust.salesforce.com</a>), Salesforce proves that we are the leader in availability. And by making its track record completely transparent, Salesforce proves we are worthy of our customers' trust. To ensure maximum uptime and continuous availability, Salesforce provides the best redundant data protection and most advanced facilities protection available, along with a complete data recovery plan—all without affecting performance.</p> <p>Salesforce uses commercially reasonable efforts to make its on-demand services available to its customers 24/7, except for planned downtime, for which Salesforce gives customers prior notice, and force majeure events. Excellent availability statistics are critical to Salesforce's customers' success and to the success of Salesforce as a company.</p> <p>The persistence layer underlying Salesforce Platform is proven database technology that powers all of Salesforce's products today, serving more than 150,000 organizations and over 4 billion transactions per day with an average request response time of less than .25 seconds all with an average up time of 99.9+ percent.</p> <p>Salesforce does not typically offer Service Level Agreements as part of the base service offering. Our approach is to offer a service with high availability and fast resolution of problems. If a customer requires an SLA it will be negotiated separately.</p> |                                                                                                                                                                                                                                    |
| ServiceNow | ServiceNow's Availability SLA is 99.8%, excluding Excused Downtime of up to two hours per month. This is achievable through the use of the Advanced High Availability (AHA) architecture described in 8.8.1 that provides failover capabilities for maintenance and service disruptions to minimize downtime.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                    |
| DocuSign   | DocuSign offers carrier class bank grade, "always on" availability. This means DocuSign has eliminated monthly maintenance (taking 0 minutes of planned downtime per year). We are a multi-year 99.99% operation. Please view the DocuSign Trust site ( <a href="http://trust.docusign.com">trust.docusign.com</a> ) for additional information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                    |
| QTS        | TIA 942 requirements for the design, construction, and management of Tier III facilities is the design basis for all QTS data centers. Using best-of-breed technologies, QTS's highly trained, certified data center professionals tailor efficient and reliable solutions to meet individual customer requirements. Primary commercial power is delivered to facilities through diverse, redundant paths to eliminate single points of failure between the nearest electrical substation (usually on-site) and each piece of customer IT equipment. QTS allows users to inspect the engineering drawings to validate that truly redundant N+1 architectures are in place and that the 99.999% uptime guarantee is supported by sound engineering and operational policies. Meaningful Service Level Agreements are backed by financial penalties spelled out in tailored Master Service Agreements with each customer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                    |

|  |                | customer may be entitled to receive a credit equal to two percent (2%) of its transaction fees for the service for that month for each one percent (1%) (or portion thereof) by which we fail to achieve such level, up to one hundred percent (100%) of the fees for such month.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|  | Hanna          | The SAP HEC offers a 99.5% uptime availability SLA for production (PRD) instances and a 95% uptime availability for quality assurance (QAS) and development (DEV) instances. This means that after taking in to account the monthly maintenance window, the TOTAL solution will be available 99.5% of the time - not that we expect it, but this equates to about 3 hours of unscheduled downtime per month. The concept of "total solution" is important because the HEC provides Holistic Solution Availability - our single SLA covers the FULL SOLUTION STACK which means it covers the Infrastructure, Operating System, local DB, the HANA in-Memory DB, and the Application layers. We do not offer individual SLAs on individual layers because if one layer fails, the entire solution is down                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|  | Hybris         | <p>The environment is completely redundant and based on a high availability architecture. The hybris private cloud is based on VMWare virtualization and is fully load-balanced.</p> <p>Customer systems reside on a redundant server infrastructure ensuring that if one server (or part of the server infrastructure) fails, a backup is in place to ensure that systems remain operational.</p> <p>The infrastructure is load-balanced ensuring high availability of the system during peak usage periods. The load-balancing allows the systems to support large volumes of simultaneous users balancing the load of activity across multiple servers ensuring peak performance of all systems.</p> <p>Redundancy of Infrastructure Components:</p> <ul style="list-style-type: none"> <li>• Multihome connectivity to the Internet backbone. Multiple connections to the internet, allows optimizing the best route as well as redundancy.</li> <li>• At an individual component level, all devices have dual physical power connections to protect against any individual power supply failure</li> <li>• Redundant Firewalls</li> <li>• Redundant Routers,</li> <li>• Redundant Load balancers</li> <li>• Virtualized Application and Web servers</li> <li>• Clustered Database - active active cluster mode for enhanced redundancy</li> <li>• High performance SAN storage- from Netapp, with built in redundancy at the disk level (NetApp proprietary RAID technology, similar to a RAID 5)</li> <li>• The data centers provide diverse power (Uninterruptible Power Supply), backup generators and air conditioning systems required to ensure equipment remain online with optimal performance 24/7/365.</li> <li>• SLA: contractually we provide a guarantee on the performance of your application at 99.9% availability.</li> </ul> |
|  | SuccessFactors | We contractually guarantee a minimum of 99.5% system uptime, with the exception of regularly scheduled and emergency maintenance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Google     | Google Cloud Platform SLA: Google's Cloud platform has SLAs ranging from 99.9 - 99.95% uptime.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                |
| Salesforce | <p>Please see response to 8.12.1 above.</p> <p>Salesforce does not typically offer Service Level Agreements as part of the base service offering. Our approach is to offer a service with high availability and fast resolution of problems. If a customer requires an SLA it will be negotiated separately.</p> <p>Salesforce uses commercially reasonable efforts to make its on-demand services available to its customers 24/7, except for planned downtime, for which Salesforce gives customers prior notice, and force majeure events. Excellent availability statistics are critical to Salesforce's customers' success and to the success of Salesforce as a company. Live and historical statistics on the Salesforce system performance are publicly published.</p> |                                                                                                                                                                                                                                                                                                                                                |
| ServiceNow | <p>DEFINITIONS</p> <p>(a) "Available" means that the Subscription Service can be accessed by authorized users.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                             |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|          | <p>(b) "Excused Downtime" means: (i) Maintenance Time of up to two (2) hours per month; and (ii) any time the Subscription Service is not Available due to circumstances beyond ServiceNow's control, including without limitation modifications of the Subscription Service by any person other than ServiceNow or a person acting at ServiceNow's direction, a Force Majeure Event, general Internet outages, failure of Customer's infrastructure or connectivity (including without limitation, direct connectivity and virtual private network (VPN) connectivity to the Subscription Service), computer and telecommunications failures and delays, and network intrusions or denial-of-service or other criminal attacks.</p> <p>(c) "Maintenance Time" means the time the Subscription Service is not Available due to service maintenance.</p> <p>(d) "Availability SLA" means the percentage of total time during which Customer's production instances of the Subscription Service are Available during a calendar month, excluding Excused Downtime.</p> <p><b>AVAILABILITY</b></p> <p>If Customer's production instances of the Subscription Service fall below the Availability SLA of ninety-nine and eight-tenths percent (99.8%) during a calendar month, Customer's exclusive remedy for failure of the Subscription Service to meet the Availability SLAs is either: (1) to request that the affected Subscription Term be extended for the number of minutes the Subscription Service was not Available in the month in accordance with the Availability SLA; or (2) to request that ServiceNow issue a service credit to Customer for the dollar value of the number of minutes the Subscription Service was not Available in the month in accordance with the Availability SLA (determined at the deemed per minute rate ServiceNow charges to Customer for Customer's use of the affected Subscription Service), which Customer may request ServiceNow apply to the next invoice for subscription fees.</p> <p><b>REQUESTS</b></p> <p>Customer must request all service credits or extensions in writing to ServiceNow within thirty (30) days of the end of the month in which the Availability SLA was not met, identifying the support requests relating to the period Customer's production instances of the Subscription Service was not Available. The total amount of service credits for any month may not exceed the subscription fee for the affected Subscription Service for the month, and has no cash value. ServiceNow may delay issuing service credits until such amounts reach one thousand U.S. dollars (\$1,000) or equivalent currency specified in the applicable Order Form.</p> |                                                                                                                                                                                                                                                                             |

|              | SuccessFactors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | We guarantee a 99.5% system availability percentage during each month for production versions, with the exception of regularly scheduled and emergency maintenance. |
| VMware       | AirWatch Service Level Agreements are non-negotiable. AirWatch has a guaranteed uptime SLA of 99.9%. Please refer to the AirWatch Hosted Services Policy for additional information. VMware AirWatch acknowledges that if it is awarded a contract under the RFP that it will annually certify to the Lead State that it still meets or exceeds the mandatory minimum requirements and technical specifications of the RFP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                     |
| FireEye      | FireEye cloud solutions are available 99.9% of the time in any calendar month, other than mutually agreed upon and scheduled downtime.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                     |
| VirtueStream | <p>Virtustream IaaS Compute is comprised of computing resources hosted in secure data centers that replace the physical computing hardware traditionally housed on Customer site. These resources include physical servers which are logically divided into VMs (virtual machines), each with an allocation of CPU and memory, and linked to storage.</p> <p>Terms used in the detailed descriptions below:</p> <ul style="list-style-type: none"> <li>•<b>μVM.</b> Pronounced “micro VM,” this is Virtustream’s fine-grained unit of measurement designed to accurately measure the actual consumption of cloud resources. A μVM is a unit of computing resources, comprised of CPU, memory, storage IOPS, and associated local network bandwidth. The usage of each μVM resource component (CPU, memory, storage input/output, and network bandwidth) is measured at five minute intervals — one unit each for 200MHz of CPU, 768MiB of memory, 40 storage fabric input/output operations per second (IOPS), and 2Mbps of local network bandwidth. The highest of the four is averaged per hour, and the hour values averaged across the month to determine the overall μVM usage for the month.</li> <li>Note: The measurement is performed at the aggregate level — across Customer’s entire μVM resource pool. Bandwidth usage is only within the data center.</li> <li>•<b>Basic Plus μVM.</b> These terms differentiate the two ways Virtustream offers μVMs services. “Basic Plus” μVM services are limited to a single Virtustream data center and have 99.99% availability for the Customer’s committed level.</li> <li>•<b>“Reserve” μVM service</b> is an equivalent quantity of Basic Plus μVMs reserved at Customer-designated secondary Virtustream data center for on-going operation during disaster events and during scheduled disaster recovery (DR) exercises.</li> <li>In both cases, overage resources required (“surges”) up to 20% above the committed level from the contract /order form are provided at the same availability level. If Customer experiences consistent overage above this level, then Customer should reset the committed level.</li> <li>•<b>High Memory.</b> Virtustream offers competitive pricing on compute services for applications that require large amounts of memory (64GiB or more).</li> <li>•<b>Enterprise</b> These terms identify the “zones” within which μVMs are made available for consumption. The “Enterprise” zone is for use by non-Internet facing workloads. Systems deployed into the Enterprise zone are not directly accessible from the Internet.</li> </ul> <p>Enterprise Basic Plus μVM (IC-uVM-BASP-ENT)</p> <p>Enterprise Basic Plus μVMs reside in a single Virtustream data center, in the Enterprise zone. Resource availability is 99.99%, and only at the designated data center.</p> <p>Overage resources required (“surges”) up to 20% above the committed level from the contract /order form is provided at the same availability level. If Customer experiences consistent overage above this level, then Customer should reset the committed level.</p> <p>Service Level. 99.99% availability for the Customer’s committed level.</p> <p>Billing. Monthly, based on resource usage.</p> <p>Tier 0 Block Storage - Local Only (IC-STO-TOA-LOC)</p> <p>Block storage with a Latency Service Level of 3ms that is maintained in a single data center with no replication capability.</p> <p>Billing. Monthly fee, based per GB of storage allocated. Allocated storage is measured every 30 minutes, averaged across the month.</p> |                                                                                                                                                                     |

Secure File Transfer Protocol (FTP) and a secure FTP web client allow for the protected transfer of case file attachments to CA Support, with the web client additionally providing case file transfer protection from CA Support. Files are encrypted and stored securely while on CA systems. Optionally unsecure FTP transfers also are supported."</p> |
|        | CA Agile | Support is available 24/7 and a contact number will be provided upon completion of the contract.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|        | ASM      | <p>CA Support can be engaged by telephone or online via CA Support Online at <a href="http://www.support.ca.com">http://www.support.ca.com</a>. CA Support is available 24x7x365. Technical support will be delivered in accordance with customer preference, and will likely include both telephone and email communications. CA Support Online is available 24 hours per day and allows customers to manage their cases (i.e. log, view, set severity level, update and close cases). CA Support Online also provides various other useful features, for example: a knowledge base search; product and documentation downloads; fixes, service pack and patch downloads; support utilities; automated notifications; access to communities, beta programs; subscriptions for hyper notifications, etc.</p> <p>While working with CA Support engineers on cases, email communications and a remote access capability can also be used to deliver support services. Secure File Transfer Protocol (FTP) and a secure FTP web client allow for the protected transfer of case file attachments to CA Support, with the web client additionally providing case file transfer protection from CA Support. Files are encrypted and stored securely while on CA systems. Optionally unsecure FTP transfers also are supported."</p> |
| Google |          | Customers are entitled to direct Google support in addition to whatever Support Services the reseller has to offer. Google has a published Technical Services Support Guide for both Google Apps and Google Cloud Platform that describe the hours of operation, how to get after hours                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|            | support, how to set the priority on a case, how to contact Google, and what the target response times are.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| AODocs     | Customers are entitled to direct AODocs support in addition to whatever Support Services the reseller has to offer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Salesforce | <p>Salesforce is proposing the Premier+Success Plan. Your Agency can cover all of its bases with this plan: support, training, and administration. It's what the + is all about. The Premier+ Success Plan gives you all the benefits of our Premier success plan, including a support rep assigned to your organization, priority case routing, 1-hour response time, 24x7 phone support, unlimited usage of our entire online course library, plus one very helpful addition: access to your own team of expert Salesforce administrators. This lets you focus on design and management while we support your configuration.</p> <p>The Premier+ Success Plan includes:</p> <ul style="list-style-type: none"> <li>• Unlimited access to our entire online course catalog of 100+ courses</li> <li>• 24x7 toll-free phone support</li> <li>• Priority case queuing and routing</li> <li>• Quick 1-hour response time</li> <li>• An assigned support account rep</li> <li>• Force.com code troubleshooting</li> <li>• Customizable end-user course templates</li> <li>• Premier Success Review to measure usage and trends</li> <li>• Access to our pool of Salesforce Certified Administrators who can configure and maintain your Salesforce edition</li> <li>• Premier Success Review to measure usage and trends</li> <li>• Includes administration services: Get configuration help. Request 100+ routine configuration updates like creating users, reports, workflow, and dashboards. You take online administration training to learn the basics, then you tell us your business requirements. Our team of certified administrators updates your Salesforce system.</li> </ul> <p>Subject to the Government Cloud Premier+ Success Plan outlined above, access to systems and permissions which could permit access to Customer Data inside of the Salesforce Government Cloud storing U.S. government, U.S. government contractors, and FFRDC Customer Data will be restricted to Qualified U.S. Citizens. Qualified US Citizens are individuals who are United States citizens, and are physically located within the United States when accessing the Salesforce Government Cloud systems; and have completed a background check as a condition of their employment with Salesforce. Severity Levels &amp; Response Times Issues will be categorized and handled according to an assigned severity level, as follows:</p> <p>Level 1 - Critical<br/>Response time: 1 Hour*<br/>Critical production issue affecting all users, including system unavailability and data integrity issues with no workaround available.</p> <p>Level 2 - Urgent<br/>Response time: 2 Hours*<br/>Major functionality is impacted or significant performance degradation is experienced. Issue is persistent and affects many users and/or major functionality. No reasonable workaround available. Also includes time-sensitive requests such as requests for feature activation or a data export.</p> <p>Level 3 - High<br/>Response time: 4 Hours**</p> |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|            | <p>System performance issue or bug affecting some but not all users. Short-term workaround is available, but not scalable.</p> <p>Level 4 - Medium</p> <p>Response time: 8 Hours**</p> <p>Inquiry regarding a routine technical issue; information requested on application capabilities, navigation, installation or configuration; bug affecting a small number of users. Reasonable workaround available. Resolution required as soon as reasonably practicable.</p> <p>*24/7 Severity 1 and 2 coverage includes weekends and holidays</p> <p>**Severity 3 and 4 target response times include local business hours only and exclude weekends and holidays</p> <p>Overview of Support Escalation Path</p> <p>An issue is received by Tier 1 Support Rep who will document details and attempt to resolve. In the event that the problem cannot be resolved at this level, case will be escalated to a Tier 2 Support Rep for further analysis. Occasionally, a Case may be received for which technical understanding or indicated fix exceeds the responsibility of Support. These issues are quickly brought to the attention of R&amp;D through the Tier 3/QA channel. Throughout the lifecycle of the case, customer will receive regular updates from the case owner at regular intervals based on case severity. Customers can work with their Support Account Specialist (SAS) if assigned through the purchase of Premier Support as a point of escalation should the need arise.</p> <p>Step-by-step escalation path:</p> <ul style="list-style-type: none"> <li>•Case is logged via Help Portal, Phone or through Live Chat</li> <li>•Depending on the functional area of the case a Tier 1 Support Rep from the appropriate skill group responds to the user confirming that the issue has been received and is in process.</li> <li>•Tier 1 analyzes the issue from the perspective of customer provided information in the case.</li> <li>•Tier 1 makes contact (phone or email) with the customer and gathers more information including any access needed to reproduce the problem.</li> <li>•With all necessary information gathered, Tier 1 will attempt to resolve the issue with the customer.</li> <li>•When resolution cannot be immediately achieved, Tier 1 Support Rep will escalate to a Tier 2 Support Rep in the same skill group. Tier 2 Support Rep will take all steps necessary to reproduce, understand and resolve the issue.</li> <li>•Technical Issues that cannot be resolved by the Tier 2 Support Rep are escalated to Tier 3. This escalation will provide a deeper layer of analysis with the possibility of escalation to QA/Development for Application issues and Escalation to Operation Services for Infrastructure issues as needed.</li> <li>•Functional Issues that cannot be resolved by Tier 3 are escalated to Product Management.</li> <li>•If it is an application Issue, necessary Development work will be performed, tested and a patch created.</li> <li>•Issue Fix Submitted to Operations for Infrastructure issues.</li> <li>•Issue Fix deployed.</li> <li>•Tier 2 Support Rep confirms success of Bug Fix in addressing the problem.</li> <li>•Tier 2 Support Rep contacts customer and confirms that the issue is Resolved.</li> <li>•Case is closed"</li> </ul> |

| VirtueStream | <p>Virtustream will work collaboratively with State of Utah to develop / maintain a relationship structure that leads to quick resolution, regularly scheduled status meetings, and quarterly business reviews.</p> <p>Virtustream will assign multiple key personnel to State of Utah including an Executive level sponsor. The primary point of contact will be Virtustream's Technical Account Manager (TAM). The TAM is responsible for daily activities/interaction and understanding/ensuring State of Utah's objectives are met at a minimum. Optimizations and other improvements to processes/standard operating procedures are delivered by the TAM in coordination with other Virtustream staff working behind the scenes. The TAM will coordinate day-to-day operation, service level management and SL reporting.</p> <p>The following outlines Virtustream's approach to service desk escalation and issue resolution.</p> <p><u>Escalations within Virtustream</u></p> <p>Virtustream will provide Level 0 and Level I support and first call resolution where possible, as determined by Virtustream. Where first call resolution is not possible, the Virtustream Service Desk provides incident management for Incidents and Urgent Service Requests escalated to Level II and Level III resources as defined below.</p> <p>In the event that Virtustream's Response to an Incident is not acceptable to the Customer, Customer can contact the Virtustream Service Desk and request escalation to the head of the Service Desk. Virtustream shall, upon receipt of any such request, immediately escalate the issue to the head of the Service Desk or technical team as appropriate.</p> <p><u>Service Request Prioritization</u></p> <p>Service Requests are assigned a priority of either 'Urgent' or 'Standard' and are queued for fulfillment with the corresponding priority. All Service Requests will be reviewed by the Virtustream Service Desk, who will determine the appropriate priority to assign with collaboration of Customer.</p> <p><u>Incident Prioritization</u></p> <p>All Incidents that are reported to the Virtustream Service Desk, or that Virtustream otherwise becomes aware of, will be initially assigned a priority by the Virtustream Service Desk as set forth below. Internal escalation for Incidents to Level II and Level III resources are based on the priority level assigned to the Incident.</p> |

| Incident Prioritization |                                                                                                                                                                                                                                                                                                                                           |                             |                                                                                                                                                                                                       |

| 1                       | Major part of the system is unavailable/not operating correctly, affecting multiple users. No workarounds in place and business operations are not possible.<br>Or<br>Incident has a critical impact on the business (e.g., loss of the Exchange Production server impacting all users).                                                  | 30 minutes                  | Response time will be within indicated time beginning from when the customer creates a ticket or a monitoring event is validated. Additional resources are engaged via Virtustream's on Call Process. |
| 2                       | Part of the system is unavailable/not operating correctly, affecting users in a single function. No workarounds in place and business operations in this function are not possible/severely impacted.<br>Or<br>Incident has a serious impact on part of the business (e.g., a configuration change is impacting a small subset of users). | 60 minutes                  |                                                                                                                                                                                                       |
| 3                       | Part of the system is unavailable/not operating correctly, affecting users in a single function. Workarounds in place, but business operations are impacted, although not severely.<br>Or<br>Incident has a temporary impact on users and is non critical or is a development issue (e.g., email is slow to deliver)                      | 4 hours                     |                                                                                                                                                                                                       |
| 4                       | Incident that is causing inconvenience to the business, but not impacting operations.<br>Or<br>Incident has a minor impact on users or business, or issue is a request for further information                                                                                                                                            | 1 business day              |                                                                                                                                                                                                       |

Virtustream will assign a Technical Account Manager starting on day 1 of the contract. The Cloud Platform, Cloud Cover (managed services), and Cloud Security team's will also be assigned to State of Utah upon execution of the contract. All of the individuals assigned to the State of Utah account have significant years of experience in their fields.

The TAM assigned to State of Utah will provide reports ad hoc but also on a quarterly basis. The quarterly business reviews include but are not limited to performance measurements, service requests. On a monthly basis, the TAM will provide a consumption report detailing the items consumed by each virtual machine. This delivers a very granular cost breakdown to State of Utah which will allow the data to be carved multiple ways. Also, information can be gathered by the State of Utah team any time they want from the xStream portal. State of Utah can also issue a ticket to Virtustream operations center to request information as well. The TAM will conduct scheduled meetings and be in constant contact with State of Utah. The TAM is an extension of the State of Utah team.

Virtustream defines a Root cause analysis (RCA) as the formal process, documented in writing by Virtustream and approved by Customer, to be used by Virtustream to diagnose problems at the lowest reasonable level which includes a report of the corrective action to be taken and defined timelines for corrective actions, which shall eliminate, to the extent reasonably possible, repeat failures. The following details the RASCI for RCA's:

|  | Role/Function                                                                                                                                                      | Customer | Virtustream |
|--|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|-------------|
|  | Request Root Cause Analysis tickets by contacting the Virtustream TAM (Customer requests Incident report/Problem record)                                           | R/A      | S           |
|  | Document, track and manage all Problem tickets using ITSM system                                                                                                   | S        | R/A         |
|  | Provide Problem management review and Root Cause Analysis (RCA) for all in-scope P 1 Incidents (preliminary report within 48 hours; final within 15 calendar days) | S        | R/A         |
|  | Provide Problem management and RCA of identified Problems (e.g., reoccurring events, alerts) - investigate and diagnose                                            | S        | R/A         |

8.12.4 Describe the consequences/SLA remedies if the Respondent fails to meet incident response time and incident fix time.

|            |                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|  | Hanna  | <p>Customer key users have several options to communicate incidents into SAP Managed Cloud Delivery.</p> <p>Primary entry point:<br/>The best and easiest way to get an incident resolved is by creating and sending incidents directly to SAP Managed Cloud Delivery Service Teams via the SAP Support Portal. This communication channel ensures that all support teams are notified and therefore is the most preferred way to contact SAP on support/service related issues.</p> <p>Alternative option to the primary entry point:<br/>Customer key user can also communicate incidents by telephone via the SAP Customer Interaction Center (CIC) (e.g. in case of facing challenges in submitting an incident via the SAP Support Portal).</p> <p>Exceptional option:<br/>During business hours, customer key user may also communicate urgent incidents by contacting designated SAP Managed Cloud Delivery service contacts like Customer Engagement Service Manager (CESM) to create an incident on behalf of the customer. However – as already mentioned - this is not the preferred way of communication, but only should be applied in exceptional cases.<br/>Support times are contractually agreed upon with each individual customer organization.<br/>The SAP Managed Cloud Delivery (MCD) Service Desk and the Service Teams are spread across Europe, Americas and Asia. As a result of the global set-up across several time zones, SAP MCD Service Desk is able to provide worldwide 24/7 support to customers, throughout the entire year and according to the "Follow-The-Sun-Principle".</p> |
|  | Hybris | <p>Key service levels are delivered through service level objectives, which provide for uptime of 99.9 for the hosted environment. Furthermore, monitoring is in place to report and alert upon uptime and response times of the environment to ensure best possible performance.<br/>The following support is specifically for the SAP Hybris Commerce, Cloud Edition.</p> <p>Customers can contact SAP Hybris Commerce, Cloud Edition technical support by toll-free telephone number or e-mail 24 hours per day, seven days per week. Based on the priority level, SAP Hybris's support personnel will attempt to provide Customer with remote assistance for reported issues.<br/>Contact information for technical support is as follows:<br/>Toll-Free Telephone Number: 888-944-2664 ext 6</p> <p>In the event that Customer contacts SAP Hybris support, SAP Hybris shall respond to such reports as follows:<br/>Priority Level :<br/>Characteristics<br/>Response Time<br/>Resolution Time Objective</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| VMware | <p>Our Availability Commitment for VMware AirWatch is 99.9%. The SLAs are subject to the terms of the applicable Terms of Service for VMware AirWatch.</p> <p>If the Availability of a class of service that you purchase is less than the associated Availability Commitment, then you may request Service Credits for that affected class of service. Availability in a given month is calculated according to the following formula:</p> <p>"Availability" = ((total minutes in a calendar month – total minutes Unavailable) / total minutes in a calendar month) x 100</p> <p>A class of service will be considered "Unavailable," subject to the Service Level Agreement Limitations set forth below, if VMware's monitoring tools determine one of the following events has occurred ("SLA Event"). The total minutes that a class of service is Unavailable for a particular SLA Event is measured from the time that VMware validates the SLA Event has occurred, as defined below, until the time that VMware resolves the SLA Event such that the Service Offering is Available to you. If two or more SLA Event occurs simultaneously, the SLA Event with the longest duration will be used to determine the total minutes Unavailable.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|         | <p>1. Each of the following will be considered an SLA Event for the Dedicated Cloud, Virtual Private Cloud, or Virtual Private Cloud OnDemand Services:</p> <p>a) Any of the network interfaces of the Service Offering Network are unavailable for more than three (3) consecutive minutes. The "Service Offering Network" means the network that extends from the network interfaces of physical host servers for a class of service to the outside network interfaces providing the Service Offering's public internet connectivity.</p> <p>b) The data store(s) associated with your block level storage for a class of service are unavailable for more than three (3) consecutive minutes.</p> <p>c) The self-service console, available at <a href="https://vchs.vmware.com">https://vchs.vmware.com</a>, cannot successfully authenticate a simulated user for more than five (5) consecutive minutes.</p> <p>d) Your running virtual machines for a class of service become inaccessible for more than five (5) consecutive minutes due to physical host server failures.</p> <p>2. Each of the following will be considered an SLA Event for the Data Protection Service:</p> <p>a) The backup storage repository associated with your Data Protection service is unavailable for more than three (3) consecutive minutes.</p> <p>b) The start time associated with your backup scheduling window is missed for longer than thirty (30) consecutive minutes.</p> <p>c) The standard 24-hour recovery point objective (RPO) is missed for any virtual machines actively enrolled in the service.</p> <p>d) Any restore operation for a virtual machine fails to complete due to backup infrastructure failures.</p> <p>3. Each of the following will be considered an SLA Event for the Disaster Recovery Service:</p> <p>a) Any of the network interfaces of the Service Offering Network are unavailable for more than three (3) consecutive minutes.</p> <p>b) The data store(s) associated with your block level storage for replication is unavailable for more than three (3) consecutive minutes.</p> <p>c) The self-service console, available at <a href="https://vchs.vmware.com">https://vchs.vmware.com</a>, cannot successfully authenticate a simulated user for more than five (5) consecutive minutes.</p> <p>d) Your failed-over virtual machines for a class of service become inaccessible for more than five (5) consecutive minutes due to physical host server failures.</p> <p>e) Any built-in service functions for failover testing, planned migration, or live failover and recovery result in virtual machine replicas not powering on in less than 4 consecutive hours from the time a request is acknowledged and approved by VMware.</p> <p>4. The following will be considered an SLA Event for the Object Storage service:</p> <p>a) A more than five (5) percent Error Rate for more than ten (10) consecutive minutes – where "Error Rate" means the number of valid requests that result in a response with HTTP Status 500 and Code "Internal Error" divided by the total number of valid requests during each five-minute period.</p> |
| FireEye | FireEye shall use commercially reasonable efforts to correct any reproducible programming error in the Software attributable to FireEye, employing a level of effort commensurate with the severity of the error, provided, however, that FireEye shall have no obligation to correct all errors in the Software.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

#### 8.12.5 Describe the firm's procedures and schedules for any planned downtime.

|    |          |                                                                                                                                                                                                                                                      |

| Google     | Google's maintenance routines are done in a manner that ensures there is no need to schedule any downtime.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                   |
| AODocs     | AODocs's maintenance routines are done in a manner that ensures there is no need to schedule any downtime.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                   |
| Salesforce | <p>There are two types of maintenance at Salesforce: System Maintenance and Release Maintenance. System Maintenance is for sustaining the performance, reliability, security, and stability of the infrastructure supporting our services. When maintenance is scheduled, the specific timing and availability to be expected during that time will be communicated to all customers approximately one week in advance of the maintenance window upon login to Salesforce and via a posting to <a href="http://trust.salesforce.com/trust/maintenance">http://trust.salesforce.com/trust/maintenance</a>. In the event of planned maintenance where the services will be unavailable for more than four hours, or that requires customer action in advance, Salesforce endeavors to communicate via email several months in advance. Please Note: If emergency system maintenance is required, customers may be notified less than one (1) week in advance.</p> <p>Major Release Maintenance is for upgrading the services to the latest product version to deliver enhanced features and functionality. Major release dates and times are posted on <a href="http://trust.salesforce.com/trust/maintenance">http://trust.salesforce.com/trust/maintenance</a> approximately one month before release to Sandbox instances. An email notification and blog post regarding Sandbox preview instructions is also sent approximately one month prior to upgrading Sandbox instances. Email notification of major release dates is sent one month prior to upgrading non-Sandbox instances. The Release Notes document describing the new features and functionality is posted in Help &amp; Training one month prior to upgrading non-Sandbox instances. Final release reminders are communicated to all customers approximately one week prior via email and upon logging into Salesforce.</p> <p>Major release maintenance occurs three times per year. The instance will be unavailable for up to five minutes during the release window.</p> <p>Patch Releases and Emergency Releases are used to deliver scheduled and ad hoc application fixes. Patch releases are scheduled weekly and are usually deployed to instances on Tuesday, Wednesday or Thursday, with release to Asia-Pacific instances the following day. Emergency releases are conducted on an as-needed basis and can occur any day of the week. Whenever possible, patches and emergency releases are deployed during off-peak hours and without downtime.</p> |                                                                                                                                                                                   |
| ServiceNow | ServiceNow notifies customers at least 10 days prior to scheduled maintenance for infrastructure network, hardware or software that might impact service. ServiceNow targets no more than two hours of downtime due to scheduled maintenance per month.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                   |
| DocuSign   | <p>Continuous availability is a necessity for mission-critical business applications in a global world. It's also a key component of the xDTM standard. Zero maintenance downtime means that DocuSign is always available, regardless of the time-of-year, day-of-week, time zone or country.</p> <p>DocuSign's Carrier Grade System Architecture, a first in SaaS, eliminates maintenance downtime, and ensures the highest level of performance resiliency and data integrity. This is accomplished through a combination of advanced high availability architecture, native DocuSign engineering, and both specialized and commodity hardware and software components.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                   |
| SAP        | Ariba                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Scheduled downtime windows for maintenance, upgrades or new releases are provided in the Service Level Agreement. Our uptime percentage takes scheduled maintenance into account. |

|        |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|        | Fieldglass           | Fieldglass' maintenance windows are as follows:<br><ul style="list-style-type: none"> <li>• Friday maintenance window of 11:00 p.m. – 2:00 a.m. Central (Daylight Savings Observed)</li> <li>• Extended maintenance windows are taken with five days advance notice and are typically as follows:<br/> - Second Friday of each of the following months: March, July, and November<br/> - Critical service packs, security issues, and other emergencies will still be taken if needed with communication as reasonable</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|        | Hanna                | SAP performs periodic scheduled maintenance activities to maintain security patching levels, application transports, fixes, network maintenance, and other scheduled proactive activities during scheduled maintenance window (agreed to by the customer). The predefined maintenance window is 4 hours per month (for example first friday of every month)<br>SAP may perform additional maintenance services on the Customer's Computing Environment in agreement with Customer, with at least ten (10) Business Days prior notice (which notice may be by email to Customer's nominated contact or posting) of the date and anticipated length of the maintenance window, and provided that SAP adheres to Customer's reasonable requirements as to the timing and duration of any such maintenance.<br>SAP reserves the right to apply critical application and operating system security patches in compliance with the SAP Global Security Team's reasonable recommendations. SAP will use reasonable endeavours to provide Customer with forty-eight (48) hours advance notice regarding the critical patch deployment unless a shorter notice period is required in order to address a critical security issue. Non critical security issues shall be dealt with by Scheduled Maintenance |
|        | Hybris               | Typically they are two-hour maintenance windows, with no downtime or on occasion maintenance periods require between 2 to 10 minutes of downtime. Other rare periods which may require further maintenance could have downtime between 30 min to 4 hours.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|        | SuccessFactors       | To address issues such as security patches, hot fixes, updates, equipment upgrades, etc., we has established maintenance windows to perform scheduled maintenance. Scheduled maintenance events typically occur during only one of these windows, roughly every 6-8 weeks. A 14-hour/week window will be used for all critical / most emergency patches and all bug fixes (will include tech stack and application patch sets).<br>We define scheduled downtime maintenance windows as:<br>Midnight to 7 a.m. Fri-Sat local time + midnight to 7 a.m. Sat-Sun local time (dependent upon the data center where the customer data is hosted)<br>We will provide customers with at least a 2 days' notice if a larger maintenance window is needed. Typically, for HCM / LMS products, customers receive a 3-5 day notification (via popup on login). When the system is not available during the maintenance there is a notification page displayed for the outage timing.<br>We plan maintenance events conservatively, and use them sparingly.                                                                                                                                                                                                                                                   |
| VMware | VMware IaaS Services | Customers are notified in advance of any expected downtime with vCloud Air services. In the event of an unexpected outages or disruption to the service, customers will be notified via their preferred contact means as soon as possible as per the terms outlined in the Service Level Agreement.<br>VMWare AirWatch                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|              | <p>We maintain standard SLAs with our customers to provide for downtime</p> <ul style="list-style-type: none"> <li>• SLAs are defined within the AirWatch Hosted Services Policy</li> </ul> <p>Per our Hosted Services Policy, we provide outage credits in the event of a service interruption:</p> <ul style="list-style-type: none"> <li>• ""AirWatch warrants it will provide Availability of the Hosted Services 99.9% of the calendar month (the "Service Level"). To the extent that the Hosted Services fail to conform to the Service Level, Customer may request service credits ("Outage Credits") as provided herein. A failure or lack of Availability for any period of time of at least one minute during which Customer is unable to utilize the Hosted Services due to AirWatch's failure to provide Customer with the specified services constitutes an "Outage". All Outage measurements will be rounded up or down to the nearest one minute increment, with increments equal to or greater than 30 seconds being rounded up to the next minute. Outage Credits are based on cumulative periods of Outage over a calendar month. Final determinations of the length of the cumulative periods of Outage over a calendar month shall be based on AirWatch's internal monitoring equipment and records. Outage Credits will be taken against only the Hosted Service fees for the month in which the Outage occurred.""</li> </ul> |
| FireEye      | <p>FireEye undertakes reasonable efforts to ensure that the service availability maintains a minimum of 99.9% availability. However there are circumstances where the system will be down due to the following:</p> <p>a) "Scheduled Maintenance Period" is the period during which weekly scheduled maintenance may be performed, or a maintenance window otherwise mutually agreed upon by FireEye and Customer. Customers receive notification and announcements for any scheduled maintenance period.</p> <p>b)"Emergency Maintenance" means any time outside of Scheduled Maintenance that FireEye is required to apply critical patches or fixes or undertake other urgent maintenance. If Emergency Maintenance is required, FireEye will contact Customer and provide the expected time frame of the Emergency Maintenance.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| VirtueStream | <p>Virtustream planned downtimes start with the weekly change board meeting by the Platform Operations group. All requested changes whether requested by customers or by the operations staff are reviewed, if approved then scheduled. Depending on the nature of the change, routine and planned, the affected customers are notified as early as possible and adjusted based on customer needs. For example, if the scheduled downtime falls on a weekend that a customer plans to do their quarterly close, Virtustream will reschedule. An emergency/urgent change may have less notice for the customers. But in all cases, customers will be notified of the upcoming downtime multiple times, start of the downtime will be specified and the expected duration. Once the downtime is complete, another notification will go out to the affected</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

#### 8.12.6 Describe the consequences/SLA remedies if disaster recovery metrics are not met.

|            |                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                    |

| Google     | Google does not produce customer specific performance reports. The web based Apps Status Dashboard displays real time System Availability Details. Customers can work with their Google reseller to design a reporting system using Google Sheets based on which incident actually impacts their end users. Service availability issues are isolated to specific applications and specific geographically locations and thus would not impact all of your users or your account at all. |                                                                                                                                                                                       |
| AODocs     | AODocs does not produce customer specific performance reports. Customers can visit the AODocs status page: <a href="https://status.aodocs.com">status.aodocs.com</a> . AODocs provides a set of usage reports and AODocs team can also work with the customer to build specific reports                                                                                                                                                                                                 |                                                                                                                                                                                       |
| Virtru     | We have realtime monitoring of both server side operations and client side interactions.                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                       |
| Salesforce | System Performance Reports Our track record speaks for itself—Salesforce has maintained high levels of availability across all Salesforce instances since inception. As an on-demand vendor                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                       |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|            | <p>providing daily service-quality data on a public website (<a href="http://trust.salesforce.com">http://trust.salesforce.com</a>), Salesforce proves that it is a leader in availability. And by making its track record completely transparent, salesforce.com proves it is worthy of customers' trust.</p> <p>A few metrics that we maintain (and publish publicly via our trust.salesforce.com website) are:</p> <ul style="list-style-type: none"> <li>-Daily Transaction Counts</li> <li>-Daily Transaction Speeds</li> </ul> <p>Salesforce is hitting almost 4 billion transactions a day. These transactions are a mix of user interacting with the system and API calls where other systems are bi-directionally interacting with Salesforce.</p> <p>Our Average Transaction Time hovers between 150 and low 200 milliseconds.</p> <p>Some additional published metrics are uptime &amp; availability, planned maintenance windows, and any performance degradation.</p> <p>The Purchasing Entity can view all of this information and more by going to trust.salesforce.com. Customers can also log a case to request system uptime reports for the last 6 months and last 12 months, however, system reports are not automatically distributed.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ServiceNow | <p>Administrators can view a wide range of performance metrics for their instance and for the machine on which the instance is running, displayed in a graphical format.</p> <p>Add these graphs and their controls to a home page to monitor the performance of instances. Some of these graphs are intended for use by ServiceNow Technical Support to troubleshoot performance issues or help tune your system for maximum efficiency. Each graph enables admins to filter the data by using different measurements, such as maximum and minimum values, means, and medians. The available graphs reflect performance in eight functional areas of ServiceNow.</p> <ul style="list-style-type: none"> <li>•Database</li> <li>•Discovery</li> <li>•Disk Partitions</li> <li>•Linux Stats</li> <li>•Logging</li> <li>•MySQL Overview</li> <li>•Node Metrics</li> <li>•Replication</li> <li>•ServiceNow Servlet</li> </ul>                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|              | SuccessFactors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Customers can view hosting performance and availability information real-time at the following link: <a href="https://support.successfactors.com/Service_Status">https://support.successfactors.com/Service_Status</a> . |
| VMware       | <p>VMware IaaS Services</p> <p>VMware vCloud Air provides Web-based capacity reporting via the MyVMware portal. For detailed performance reporting, participating entities may wish to acquire VMware vRealize Operations suite, which is a non-Web based software product which provides real-time and historic performance statistics for vCloud Air.</p> <p>VMware AirWatch</p> <p>We can provide sample performance testing documents that validate our ability to handle anticipated workload under real-world conditions as conversations progress.</p> <p>We have a dedicated team for scalability and performance testing. They work with both internal teams and customers to conduct testing.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                          |
| FireEye      | This is not applicable as each of the FireEye offerings are classified as SaaS. The performance of the FireEye cloud environments are continuously monitored and managed by the cloud service operations (CSO) team to ensure secure operation and availability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                          |
| VirtueStream | <p>Service Levels will be calculated and measured monthly by Virtustream on a calendar month basis and reported each month for the previous month. The reports will be provided to Customer by the tenth (10th) working day of the month following that to which such report relates, commencing on the second (2nd) month following the Service Start Date and each month thereafter. The monthly service level report will contain at least the following items: (i) Uptime statistics for the month concerned; (ii) an analysis of reported incidents over the previous month, broken down by type for discussion; (iii) action plans for items giving rise to concern; (iv) comments and observations on any issues arising from Virtustream's performance monitoring activities; (v) recommendations on service delivery strategies to maintain or enhance the service level; and (vi) review of general business requirements ("Service Level Report"). Cloud Platform Services (CPS) has its own specific service levels as described in this document. Cloud Cover Services (CCS) has service levels that pertain to the CCS offerings and are reported separately. Not all Virtustream customers have CCS but all Virtustream customers use CPS.</p> |                                                                                                                                                                                                                          |

#### 8.12.8 Ability to print historical, statistical, and usage reports locally.

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                      |

|            | <p>In addition to the Salesforce Trust site (<a href="http://trust.salesforce.com/trust/status">http://trust.salesforce.com/trust/status</a>) to monitor uptime and performance, your Agency will also have access to a System Overview, which will help you monitor performance and usage of your own Salesforce org. This overview includes:</p> <p>Schema - # and % of custom objects and data storage<br/> Business Logic - # and % of Rules, Apex triggers and classes, as well as % of code used<br/> License Usage<br/> API Usage - # and % of requests in the last 24 hours<br/> User Interface - # and % of custom apps, sites, flows, custom tabs and pages<br/> Portal Usage</p> <p>The above list is of all the possible metrics that you may have in your system overview.</p> |                                                                                                                                                                                                                                                                         |
| ServiceNow | <p>Yes. Instance performance can be viewed locally.</p> <p>Customers can use the Customer Support Portal to obtain information about the real availability of all their instances. Real availability is the percentage of production time that an instance is up and available for use.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                         |
| DocuSign   | <p>Yes. DocuSign offers a number of pre-defined reports to provide detail and summary information on DocuSign usage in the account, such as by Envelope, Recipients, Velocity of signing, and User Access among many other reports. Users can modify report criteria such as data ranges and reports can be scheduled to execute. All reports can be downloaded or Printed locally.</p>                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                         |
| QTS        | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                         |

| VMware     | <p>VMware IaaS Services</p> <p>At the present time, VMware does not provide end user customers with specific reports for SLA performance. VMware tracks the overall health of the environment and will report to customers in the event of an outage. However, specific SLA performance is not delivered as a report, but as an alert. It is currently the customer's responsibility to track downtime within their environments and report to VMware when they believe SLA has been violated.</p> <p>VMWare AirWatch</p> <p>Customers can export and print solution data using interactive dashboards (CSV), reports (PDF, XLS, and CSV), the AirWatch Hub (PDF), and event log (CSV)</p>                                                                                                  |                                                                                                                                                                                                                                                                         |
| FireEye    | Each of the offerings in this response have reporting capabilities local to the system and users with the appropriate access rights.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                         |

#### 8.12.9 Offeror must describe whether or not its on-demand deployment is supported 24x365.

|            |                                                                                                                                                                                                  |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CA         | N/A. CA only offers SaaS solutions and manages all aspects of the service. Clients do not have direct access to the environment.                                                                 |
| Google     | Purchasing entities will subscribe to an initial set of user licenses and can provision new user accounts at their convenience within that range of licenses.                                    |
| Salesforce | The Salesforce service can be deployed rapidly since our customers do not have to spend time procuring, installing or maintaining the servers, storage, networking equipment, security products, |

|              |                                                                                                                                                                                                                                               |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              | or other infrastructure hardware and software necessary. The service is always available and the customer can deploy 24x365 at their own pace.                                                                                                |
| ServiceNow   | ServiceNow is supported 24x365.                                                                                                                                                                                                               |
| FireEye      | The FireEye offerings in this response are SaaS service models. Once the application or service is set up there are no further deployment steps necessary. On-demand Self-service options referenced in section 8.1.2.1 are available 24x365. |
| VirtueStream | Virtustream's self-service portal allows authorized users to deploy resources on-demand 24x365.                                                                                                                                               |

#### 8.12.10 Offeror must describe its scale-up and scale-down, and whether it is available 24x365.

|              |                                                                                                                                                                                                                                                                                                                                                                           |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CA           | N/A. CA only offers SaaS solutions and manages all aspects of the service; monitoring and capacity planning is included as part of the service.                                                                                                                                                                                                                           |
| Google       | Purchasing entities will subscribe to an initial set of user licenses and can provision new user accounts at their convenience within that range of licenses. If the purchasing entity has exceeded or is about to exceed their user count they can place an order for additional licenses at any time. Scale-down procedures will be handled on the renewal anniversary. |
| Salesforce   | The Salesforce cloud based architecture will allow the State to deploy Salesforce solutions rapidly and scale at will for future needs. Customer's may scale up and add licenses at any point during their annual contract cycle. User counts are examined on an annual basis at time of renewal to ensure the customer had adequate license coverage.                    |
| ServiceNow   | ServiceNow can automatically scale its application servers horizontally by adding or subtracting them to the load balancer pools for a particular instance. Scaling is managed by the ServiceNow Cloud Operations team.                                                                                                                                                   |
| FireEye      | The FireEye offerings in this response are SaaS service models. FireEye cloud environments are continuously monitored by cloud service operations (CSO) personnel to help ensure optimal resources are allocated to the system 24x365.                                                                                                                                    |
| VirtueStream | Virtustream's self-service portal allows authorized users to deploy or de-commission resources on-demand 24x365.                                                                                                                                                                                                                                                          |

### 8.13 Cloud Security Alliance

Describe your level of disclosure with CSA Star Registry for each Solution offered.

- a. Completion of a CSA STAR Self-Assessment, as described in Section 5.5.3.
- b. Completion of Exhibits 1 and 2 to Attachment B.
- c. Completion of a CSA STAR Attestation, Certification, or Assessment.
- d. Completion CSA STAR Continuous Monitoring.

Carahsoft is proposing a number of Service Providers that are members of the Cloud Security Alliance. For example Salesforce is a corporate member of the Cloud Security Alliance (CSA) and contributes to their research and initiatives in a variety of ways. Salesforce has completed the CSA Consensus Assessments Initiative questionnaire (CAIQ), which maps to the CSA Cloud Controls Matrix (CCM) for the Salesforce Services, including Force.com, Analytics Cloud, Communities, Chatter, Sales Cloud and Service Cloud. A copy of the current completed CSA CAIQ can be provided to prospects or customers under NDA upon request.

### 8.14 Service Provisioning

8.14. 1 Describe in detail how your firm processes emergency or rush services implementation requests by a Purchasing Entity.

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                         |

|            | ASM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Standard lead times for requests can be waived for requests that have a critical business need such as a data recovery effort                                                           |
| Google     | Order processing from the time a valid Purchase Order is submitted has a normal turn around time of three business days. Google's sales team can be contacted to expedite orders when needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                         |
| AODocs     | Order processing from the time a valid Purchase Order is submitted has a normal turn around time of two business days. AODocs's sales team can be contacted to expedite orders when needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                         |
| Virtu      | Requests are triaged by the support and if an emergency is identified, the request is escalated by the VP of Product who immediately assigns the issue as a top priority to a developer. Once completed a hotfix is pushed to production.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                         |
| Salesforce | <p>Subscription-based, On-Demand Service</p> <p>Salesforce offers on-demand Platform as a Service (PaaS) and Software as a Service (SaaS). The Salesforce PaaS and SaaS offerings are subscription based and in a per user/month or user/year format billed annually with some of our products offered as total logins per month or by defined number of members billed annually.</p> <p>Multi-tenancy gives applications elasticity. Force.com applications can automatically scale from one to tens of thousands of users. Processing more than three billion transactions each day, Force.com is used for large-scale deployments. Any application that runs on Force.com is automatically architected to seamlessly scale from 1 user to 100,000 users without the customer having to do anything differently.</p> <p>All applications (includes mobile, offline and read-only options) and data running on Force.com are deployed to and replicated across multiple data centers in different geographies. Every application, no matter how large or small, gets the full benefits of the backup, failover, disaster recovery, and other infrastructure services required for an organization's mission-critical applications.</p> |                                                                                                                                                                                         |
| ServiceNow | ServiceNow professional services organization responds to customer needs based on each request. Once a purchase order is received from the Purchasing Entity, ServiceNow contacts the Customer to discuss schedules. Resources are assigned based on the project need. If the customer has a priority issue with the system, they would open a ticket and the ticket SLA process would proceed until the issue is resolved. Every ServiceNow customer is supported based on their priority and need.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                         |
| SAP        | Hanna                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Rush or emergency infra provisioning can be request in exceptional situations and would be addressed on best effort priority basis.                                                     |

General service requests have a standard 48 hour lead time                                  |
| Google     | Standard lead time is three business days.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                               |
| AODocs     | Standard lead time is two business days.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                               |
| Virtru     | The Lead-time for provisioning is no more than 15 minutes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                               |
| ServiceNow | ServiceNow provisions new instances or newly purchased users or applications to the instance within 48 hours after receipt of order. If users or applications are required more quickly, the customer controls access to all ServiceNOW capabilities at any time and the true-up occurs thereafter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                               |
| DocuSign   | DocuSign is intuitive and easy-to-use. Getting started with our cloud solution, standard console, can be implemented in a day. Adding integrations or API's will add to the complexity of the implementation, but our Professional Services are there to guide you every step of the way.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                               |
| VMware     | <p>VMware vCloud Air Services</p> <p>VMware vCloud Air OnDemand services can be purchased and provisioned in minutes via the vCloud Air self service portal. VMware vCloud Air services other than OnDemand are purchased via purchase order. Purchase orders are typically processed on the day of order. Once services have been purchased the user can immediately begin provisioning services from the self service portal. These services are available within minutes of launch.</p> <p>VMware vCloud Government Services</p> <p>VMware vCloud Government Services are purchased via purchase order. Purchase orders are typically processed on the day of order. New environments require an RSA token that is overnighted for 2 factor authentication. Once the user has their RSA token they can begin to provision IaaS Services.</p> <p>VMWare AirWatch</p> <p>AirWatch is committed to implementing the solution in a timely manner and we work closely with customers to meet internal deadlines.</p> <p>Delivery and deployment models will vary depending the hosting model selected by the customer:</p> <ul style="list-style-type: none"> <li>• SaaS deployments can be implemented within several days and some within a few hours</li> <li>• Large enterprise deployments with numerous integration endpoints may require additional time</li> </ul> <p>Once an order is placed, we immediately begin working with the customer to finalize terms and conditions in a mutually agreeable manner and begin the implementation process.</p> <p>We schedule regular check-ins for project status updates and to discuss any questions or concerns.</p> |                                                                                                                                                               |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| FireEye      | FireEye anticipates that the standard lead-time is expected to take no more than five (5) business days. However, FireEye is willing to accommodate an urgent request from NASPO in order to provide adequate service to the participating states.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| VirtueStream | <p>Virtustream's standard lead-time for provisioning can vary based of the type of deployment and requirement. Resources can be deployed on-demand basis by State of Utah. For the initial services, there is a standard which is maintained as best practice.</p> <p>At project kick-off, Virtustream and State of Utah will develop a detailed Implementation Plan, on a system-by-system, week-by-week basis, to ensure that both sides of the relationship have clear expectations on what is to be accomplished, by whom, and in what timeframe. Upon completion of the Implementation Plan, Virtustream and State of Utah will establish a Project Governance Plan and the Project Governance Plan will manage Implementation Plan and ensure alignment at all tiers of the organization, define expectations for status update frequency and formats, and establish an escalation path for issue identification and resolution.</p> <p>Virtustream offers a dedicated onboarding project team that is charged with migrating clients into the xStream® cloud. This chargeable service includes resources from our platform and SAP teams and development of an onboarding project plan with milestones and deliverables.</p> <p>Virtustream uses a mature methodology to move clients onto our cloud platform, a process which is continuously refined and improved. A link is established to the client site using a Virtual Private Network (VPN) or Multiprotocol Label Switching (MPLS) circuit, for customer access and testing of migrated systems. Prerequisites are put into place (domain controllers, backup systems, infrastructure, networking, etc.) prior to systems being onboarded, in a defined sequence.</p> <p>Virtustream SAP basis team members test the systems before turning them over to Ascend for validation. Once on the xStream® platform, Virtustream monitors, backups and maintains the systems. As a component of the Virtustream platform, all core units are replicated to an alternate data center to provide disaster-recovery capability.</p> |

Figure 3. Sample Work Plan

### 8.15 Back Up and Disaster Plan

8.15.1 Ability to apply legal retention periods and disposition by agency per purchasing entity policy and/or legal requirements.

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Salesforce | Salesforce customers are responsible for complying with their company's data retention requirements in their use of the Salesforce Services. If a Salesforce customer must preserve data and the retention procedures above are insufficient, they may schedule a weekly export of data or copy to a sandbox account. Exports of Customer Data are available in comma separated value (.csv) format by request via Salesforce's Customer Support department. In addition, many exports can be manually pulled by the designated org administrators.                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| ServiceNow | Once notified ServiceNow has the ability to leverage our internal clone operation process. This provides a locked state copy of the instance, while the customer can continue working on the production instance. Any data additions, changes or deletes will be on the production but not on the frozen instance copy.<br><br>Additionally, ServiceNow can freeze backups to prevent them from being over written.                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| DocuSign   | DocuSign customers determine their retention policies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| QTS        | Yes QTS will work with customers to meet legal requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|            | Fieldglass                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Fieldglass has many methods in which we can freeze customer data, today. We have the capabilities to restore, utilizing a point in time recovery method to a secondary system for legal review effectively delivering a system that has been frozen in time for all clients.                                                                                                                                                                                                                                                                                                                                                                                                                   |
|            | Hanna                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | HEC standard backup retention is 1 month for productive systems, and 14 days for non-productive systems. However retention period can be changed per request and may have cost impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|            | SuccessFactors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | A customer can configure as many ""purge rules"" as required to comply with data privacy rules. Since these rules vary by country, the solution provides the flexibility to define different retention periods for groups defined by country, department, division, location, job code and hire date.<br>Customers can grant permissions to the appropriate users to create a request to purge data and to approve the request to purge data. These ""purge rules"" can be scheduled to reoccur. User records are kept in the system, for reporting purposes, but their data is anonymized. Our customers use the solution in compliance with local regulations today in almost 180 countries. |
| VMware     | VMware IaaS Services<br>Participating entities that leverage VMware Data Protection are able to specify the retention period of their backups to comply with policies and legal requirements. Data Protection leverages snapshots to take an image level backup of virtual machines. When a backup is initiated, a snapshot is taken of that virtual machine. Once the snapshot is taken it is then stored on the Data Protection storage for the duration of the retention period assigned in the policy. The policy column in the screenshot below illustrates the variety of data retention policies that have been set within a sample customer's vCloud Air Data Protection instance. In this example retention policies range from 3 to 365 days. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Virtu      | Please see the Virtu Disaster Recovery Plan provided in the Supplemental Information section of this response.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                 |
| Salesforce | The Salesforce service performs near real-time replication at each data center and annual disaster recovery tests for the service verify the projected recovery times and data replication between the production data center and the disaster recovery center. The disaster recovery site is a 100% replica of the primary production site of capacity (host, network, storage, data). Data is transmitted between the primary and disaster recovery data centers across encrypted links. Additionally, back-ups of data are performed and data is retained on backups at the geographically separated disaster recovery data center location [CP-4, CP-6, CP-7, CP-9, MP-5]. |                                                                                                                                 |
| ServiceNow | <p>ServiceNow is divided into two distinct environments for Business Continuity (BC) and Disaster Recovery (DR). ServiceNow's corporate environment and its data center environments are physically and logically isolated from each other. A disaster in ServiceNow's corporate environment could occur with little or no impact on the ability for the data centers within the private cloud to operate.</p> <p>In both cases, the BC and the DR are supported by a series of SOPs that allow ServiceNow to quickly and effectively take action when it is required.</p>                                                                                                     |                                                                                                                                 |

|                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                       |                       |

|                                                                  | <p>ServiceNow's customer DR is documented in its Information System Contingency Plan (ISCP), which covers its data center environments, and includes all customer environments as well as the instances that ServiceNow uses to run its business.</p> <p>ServiceNow formally tests this process on an annual basis and can produce compliance reports for customers requiring them. ServiceNow also uses the process of transferring instances to reduce the impact of maintenance on its service and will move instances out of one data center to the other on a daily basis. As a result, ServiceNow is very well practiced at the process of "failing over" customer instances.</p> <p>ServiceNow's BC process covers its functional offices and is a separate standard operating procedure from its customer environments. The BC Plan (BCP) has been developed in concert with the entire business including Business Impact Assessments (BIA) to understand the impact of the loss of any given systems or locations.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                       |                       |

|              | <p>Providing a secure and stable product that mitigates vulnerabilities, reduces risk and quickly responds to the evolving threat landscape is considered a top priority. Following the guidelines established in NIST SP 800-30, regular risk and vulnerability assessments are performed against the production environment to identify, assess and remediate emerging threats. When potential vulnerabilities are discovered, we follow a documented procedure to prioritize and deploy necessary patches.</p> <ul style="list-style-type: none"> <li>•Vulnerabilities and threat-sources are identified by conducting interviews with various members of the Cloud Operations community and mapping data to the AirWatch business landscape.</li> <li>•We can provide additional information as conversations progress.</li> </ul> |
| FireEye      | Varies by service and customer deployment. Will be defined during engagement setup.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| VirtueStream | Virtustream has built redundancy into all layers of the physical infrastructure in order to deliver SLAs up to 99.999% and mitigate any known risks. To further mitigate against the unknown, Core microVM's are designed for mission-critical workloads and include reserved compute capacity in a secondary datacenter and automatic storage replication to facilitate the ability to restore operations in the event of an outage at the primary data center.                                                                                                                                                                                                                                                                                                                                                                       |

8.15.3 Describe the infrastructure that supports multiple data centers within the United States, each of which supports redundancy, failover capability, and the ability to run large scale applications independently in case one data center is lost.

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                               |

| CA         | APM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | AWS datacenters provide redundancy and failover within a single AWS EC2 zone (i.e., a single geographic location). Professional Services would need to be engaged to provide multi-geo DR                                                     |
|            | MAA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | MAA service is currently available from one data center only.                                                                                                                                                                                 |
|            | CA Agile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | We run a hot/warm data center configuration and have the ability to quickly failover if required. Our data centers are ~1300 miles apart to ensure redundancy. We perform full system planned switch over testing at a minimum semi-annually. |
|            | ASM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | ASM core services run in one primary data center, and can fail over to the DR site if there is a catastrophic failure.                                                                                                                        |
| AODocs     | As described elsewhere in this response, AODocs is built on Google Cloud Platform (AppEngine) and Altirnao does not manage this infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                               |
| Virtru     | We operate our infrastructure in multiple Availability Zones, and any given data center failure would not result in data loss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                               |
| Salesforce | Customer Data for customers in Salesforce's Government Cloud is stored in two of our U.S. data center locations. Our service is collocated in dedicated spaces at toptier data centers. Salesforce's hardware is located inside of secure server rooms designated to Salesforce and separated by concrete walls from other data center tenants. Individual racks inside of the data center are secured with a lock. Specific racks are allocated for hardware supporting the Salesforce Government Cloud. Access to the racks supporting the Salesforce Government Cloud hardware is restricted to Qualified U.S. Citizens as described in the section above. |                                                                                                                                                                                                                                               |
| ServiceNow | ServiceNow's data centers and cloud-based infrastructure have been designed to be highly available. All servers and network devices have redundant components and multiple network paths to avoid single points of failure.                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                               |
|            | At the heart of this architecture, each customer application instance is supported by a multi-homed network configuration with multiple connections to the Internet. Production application servers are load balanced within each data center. Production database servers are replicated in near-real time to a peer data center within the same geographic region.                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                               |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|          | <p>ServiceNow leverages this Advanced High Availability (AHA) architecture for customer production instances in several ways:</p> <ul style="list-style-type: none"> <li>•In the event of the failure of one or more infrastructure components, service is restored by transferring the operation of customer instances associated with the failed components to the peer data center.</li> <li>•Before executing required maintenance, ServiceNow can proactively transfer operation of customer instances impacted by the maintenance to the peer data center. The maintenance can then proceed without impacting service availability.</li> </ul> <p>This approach means that the transfer between active and standby data centers is being regularly executed as part of standard operating procedures – ensuring that when it is needed to address a failure, the transfer will be successful and service disruption minimized.</p> <p>See the “ServiceNow Security, Operations, and Compliance White Paper” included with this response for more information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| QTS | <p>QTS cloud utilizes alternate telecommunications services from both TW Telecom and NTT America that reduces the likelihood of experiencing a single point of failure.</p> <p>QTS's failover facilities in RIC1 and ATL1 are a carrier-class and carrier-neutral datacenter with multiple Internet Service Providers. QTS-FC can establish connectivity with another service provider with 24 hours in the event of an unrecoverable catastrophic connectivity failure of QTS-FC's primary/secondary provider.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SAP | Ariba                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Ariba has implemented two sites within each region. In North America the sites are currently located in San Jose, California and Sterling, VA. In Europe the sites are located in St. Leon-Rot, Germany and Amsterdam, Netherlands. The act of failing over from one site to another has a design goal for its Recovery Time Objective (RTO) of no more than four hours. The design goal for the Recovery Point Objective (RPO) is five minutes.</p> <p>Disaster recovery options are included for all Ariba Cloud Services. In the event of a fail-over to the disaster recovery site, no customer changes are required as all URLs that customers use to reach the applications will continue to work. Ariba will notify customers via their email addresses in the event of unplanned downtime.</p> <p>Internally, Ariba uses a documented system recovery plan that outlines the approach and steps for recovering the applications. This document defines roles and responsibilities in the event of disaster:</p> <p>Local Ariba staff maintains the hardware remotely.</p> <p>Ariba maintains the application software.</p> <p>Processes are in place to keep database and file servers in sync between primary and backup data centers.</p> <p>The failover process of all parts of the infrastructure is automated.</p> <p>In the event of a catastrophe, Ariba will declare the primary data center "down" and locally the script will be run to switchover and start the applications at the remote data center.</p> <p>Ariba tests power outage backup scenarios and the Disaster Recovery Plan on a periodic basis to ensure it is up-to-date, successful, and effective.</p> |

Both are managed by Server Central which is a Tier 4 hosting provider and a Tier 1 data provider (see the note below).</p> <p>All systems are ""mission-critical loads"" supported by IDC Redundant Power Management System (UPS, generators etc.).</p> <p>Note: Data centers can be classified by tiers, with Tier 1 being the most basic and inexpensive, and Tier 4 being the most robust and costly. According to definitions from the Uptime Institute and the latest draft of TIA/EIA-942 (Telecommunications Infrastructure Standard for Data Centers), a Tier 1 data center is not required to have redundant power and cooling infrastructures. It needs only a lock for security and can tolerate up to 28.8 hours of downtime per year. In contrast, a Tier 4 data center must have redundant systems for power and cooling, with multiple distribution paths that are active and fault tolerant. Furthermore, access should be controlled with biometric readers and single-person entryways, gaseous fire suppression is required, the cabling infrastructure should have a redundant backbone, and the facility can permit no more than 0.4 hours of downtime per year.</p> <p>Tier 1 or 2 is usually sufficient for enterprise data centers that primarily serve users within a corporation. Financial data centers are typically Tier 3 or 4 because they are critical to our economic stability and, therefore, must meet</p>                                                |

All major components are redundant, including power, HVAC, fire suppression, and the physical components of our network. Production data centers have strict access controls, and are continuously staffed and monitored to help prevent acts of sabotage or vandalism. All production data centers are ANSI/EIA/TIA-942 Tier III/IV facilities, and are ISO 27001 certified.</p> <p>Production data centers are also geographically dispersed to help prevent a single event from affecting more than one data center. In the event a production data center has an outage we failover to an alternate data center in the same geographic region to minimize impact to customers.</p> <p>Our Cloud Operations teams are also geographically dispersed, working in offices in the US, Europe, South America, and India. Should an office be impacted by an environmental event or pandemic, other offices can continue operations.</p> <p>Aspects of the plan are described in the SOC reports, Disaster Recovery Plan ("DRP") and Business Continuity Plan ("BCP") solutions are dependent on several factors. The customer may be responsible for parts of the recovery/continuity activities</p> |
| VMware | <p>VMware IaaS Services</p> <p>VMware offers several technologies to provide redundancy, failover capability and the ability to run large scale applications independently in case one data center is lost.</p> <p>vCloud Air is built upon infrastructure that is architected for High Availability leveraging proven vSphere High Availability (HA), vSphere vMotion, and VMware Distributed Resource Scheduler (DRS). These technologies allow participating entities to migrate live workloads and/or automatically restart VMs in the event of host maintenance or unexpected issues. These technologies also maintain a consistently high level of performance for all tenants.</p> <p>VMware vSphere vMotion enables migration of live VMs to transfer your workloads during maintenance, without downtime. Unlike other cloud providers, VMware ensures that tenants are not impacted by standard maintenance. VMware performs vMotion migrations for maintenance behind the scenes for its tenants in vCloud Air during maintenance windows without disrupting tenant applications.</p> <p>vMotion is also used to seamlessly migrate VMs from an on-premises environment to vCloud Air and back. Today, vCloud Air is one of only a few major cloud vendors that uses live migration to do maintenance. This capability will enable NASPO participating entities to perform live migrations to move their applications to and from the cloud for maintenance and other purposes. This</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              | <p>technology inherently prevents the lock-in experienced when migrating to cloud services offered by others.</p> <p>VMware Dynamic Resource Scheduler continuously monitors CPU and memory utilization across a cluster of vSphere hosts, allocating resources among VMs and rebalancing performance during high-volume peak times. This is performed 24x7 within the VMware vCloud Air environment.</p> <p>VMware vSphere High Availability delivers the availability required by most applications running in VMs, independent of the operating system and application running in it. Whether participating entities leverage Microsoft Windows or Linux; off-the-shelf or custom developed application; single VMs or many, HA provides uniform, failover protection against hardware and operating system outages within vCloud Air.</p> <p>HA can:</p> <ul style="list-style-type: none"> <li>• Monitor VMware vSphere hosts and VMs to detect hardware and guest operating system failures.</li> <li>• Restart VMs on other vSphere hosts in the cluster without manual intervention when a server outage is detected.</li> <li>• Reduce application downtime by automatically restarting VMs upon detection of an operating system failure.</li> </ul> <p>Other cloud providers require you to build availability in to your application. In the best case scenario, this is as simple as including a load balancer in front of multiple VMs in the same tier to achieve basic high availability.</p> <p>However, often the technologies of other cloud service providers requires a complete redesign of the hosted application, and often network devices such as load balancers are offered at an additional cost, unlike vCloud Air.</p> <p>vCloud Air was built to run hosted applications as-is, providing availability down to a single VM instance, and balancing resources across multiple tenant needs with DRS. Unlike other clouds, with vCloud Air and vCGS, participating entities are not required to rebuild thier application to get the flexibility and agility that cloud can provide. Of course, vCloud Air customers usually do not just stop at moving applications to vCloud Air. Once in the cloud they start to explore features like our Advanced Networking Services and using APIs, automation, and CI/CD tools to deliver services faster. And, where it makes sense, customers do look at application redesigns as well, but with vCloud Air it is not because they must redesign to ensure the application is always available.</p> <p>VMWare AirWatch</p> <p>AirWatch features active-passive configurations for high availability and redundancy with all components made to failover with minimal downtime. Load balancing capabilities are deployed across multiple data centers to ensure immediate server pick up, ensuring zero end user downtime. AirWatch also incorporates replication technology featuring SQL log shipping or network SAN byte replication to prevent data loss.</p> |
| FireEye      | Varies by service and customer deployment. Will be defined during engagement setup.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| VirtueStream | Virtustream's U.S. based data centers are located in Washington, DC, Las Vegas, and San Francisco. All data centers meet the highest industry standard in terms of operational protocol and have redundancy built into all layers of the physical infrastructure. Core microVM's, which are used for mission-critical workloads, provide reserved compute capacity and automatic storage replication so that these systems can be failed over to a secondary data center and have access to the compute capacity required in the event of a catastrophic outage at the primary data center.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## 8.16 Solution Administration

### 8.16.1 Ability of the Purchasing Entity to fully manage identity and user accounts.

| Virtu      | Virtu does not have an identity system. We federate authentication to Oauth and Email loop verification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                             |
| Salesforce | <p><b>Identity Management</b><br/>Logon is form-based. When users log into the Salesforce application, they submit a username and password, which are sent to Salesforce via an TLS-encrypted session. Security features are developed by Salesforce and built into the application. Third-party packages are not used for development or implementation of security internal to the application.</p> <p>In addition, single sign-on and two-factor authentication may be used to authenticate users. Some organizations prefer to use an existing single sign-on capability to simplify and standardize their user authentication. You have two options to implement single sign-on—federated authentication using Security Assertion Markup Language (SAML) or delegated authentication.</p> <p>Federated authentication using Security Assertion Markup Language (SAML) allows you to send authentication and authorization data between affiliated but unrelated Web services. This enables you to sign-on to Salesforce from a client application. Federated authentication using SAML is enabled by default for your organization.</p> <p>Delegated authentication single sign-on enables you to integrate Salesforce with an authentication method that you choose. This enables you to integrate authentication with your LDAP (Lightweight Directory Access Protocol) server, or perform single sign-on by authenticating using a token instead of a password. You manage delegated authentication at the profile level, allowing some users to use delegated authentication, while other users continue to use their Salesforce-managed password. Delegated authentication is set by profile, not organization wide. You must request that this feature be enabled by Salesforce.</p> <p>Salesforce can be configured to utilize Active Directory directly via Delegated Authentication, or indirectly via Federated Identity using either SAML 1.1, or SAML 2.0. Additionally your users can be loaded from information drawn from your Active Directory servers and modifications made in Active Directory can be propagated into Salesforce.</p> <p>Customers can use their own SAML Identity Provider, or license one directly from Salesforce with our Identity Connect product.</p> <p><b>User Accounts</b><br/>All users and application-level security are defined and maintained by the organization administrator, and not by Salesforce. The organization administrator is appointed by the customer. An organization's sharing model sets the default access that users have to each other's data. There are four sharing models: Private, Public Read Only, Public Read/Write, and Public Read/Write/Transfer. There are also several sharing model elements: Profiles, Roles, Hierarchy, Record Types, Page Layouts, and Field Level security.</p> |                                                                                                                             |
| ServiceNow | Customers manage their own instances, including assigning users, defining user roles and profiles, and administrating the system. ServiceNow does not have access to the Customer's instances. The ServiceNow wiki has all ServiceNow documentation available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                             |

| Virtu      | AlienVault IDS is used to perform virus and vulnerability scans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                               |
| Salesforce | Salesforce runs antivirus software on the production systems that store, transmit or process customer information. The Anti-virus scans host filesystems (not customer data). The antivirus software checks for virus definition updates daily. Other controls are also used to address malware such as hardening the Operating System of our servers, firewall configuration to ensure only required ports are open and all others denied, and use of intrusion detection systems. Access to these systems is restricted to authorized personnel and all these systems, as well as the host platforms, are monitored in real time through a security monitoring system.<br><br>The application only accepts http and https traffic, but Salesforce does not restrict the file types users can upload. Salesforce does not modify or clean any customer data; the system stores the information provided in an encoded format within the database. It is recommended that customers run updated antivirus and antimalware solutions to help mitigate these threats. The production system receives inbound mail as part of the workflow functionality, but this does not pose any threat to our network, application, or users. No code in the email can be executed or transferred, |                                                                               |

| VMware       | VMware IaaS Services<br>Anti-virus software is installed on all development, domain and production hardware devices owned and operated by VMware, which hold company data, passwords, or keys. These devices maintain the most recent version of the anti-virus software signature file.<br>VMware AirWatch<br>AirWatch has installed a best-in-class, continuously-updated anti-virus suite on servers in the SaaS environment                                                                                                                                                   |
| FireEye      | FireEye employs a multi-layered, continuously monitored and engaged set of active defenses to provide anti-virus protection for customer data stores that both meet and exceed traditional approaches. FireEye, and our customers, not only are prepared to reactively withstand attacks from known virus vectors, but since FireEye and our MVX technology is literally, continuously, and securely detonating viruses and other advanced malware on the way to our customer's data stores, FireEye proactively defends from zero day and other emergent attacks as they happen. |
| VirtueStream | VirtueStream offers Anti-Virus protection based on per virtual machine, per month charge.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

#### 8.16.3 Ability to migrate all Purchasing Entity data, metadata, and usage data to a successor Cloud Hosting solution provider.

Carahsoft will work with each Participating Entity to develop a cost effective plan to assist in the migration and implementation of their data into the new service that has been selected.

#### 8.16.4 Ability to administer the solution in a distributed manner to different participating entities.

Carahsoft will view each Participating Entity as a separate customer and privileges can be assigned for control access even within the individual services.

#### 8.16.5 Ability to apply a participating entity's defined administration policies in managing a solution.

Each Participating Entity will have the ability to work with Carahsoft and the Service Provider to identify defined administration policies to manage the solution.

### 8.17 Hosting and Provisioning

#### 8.17.1 Documented cloud hosting provisioning processes, and your defined/standard cloud provisioning stack.

|    |     |                                                                                                                                                                                                                                                                                                                                                                              |

| Virtu      | Ubuntu AMIs provisioned using terraform and configured by Ansible                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                               |
| Salesforce | <p>Cloud Hosting and Provisioning</p> <p>Salesforce's deployment model is a "public" cloud infrastructure, as defined by NIST 800-145. In the Salesforce Government Cloud, an agency dynamically provisions computing resources over the Internet on our multi-tenant infrastructure. This is a cost effective deployment model for agencies as it gives them the flexibility to procure only the computing resources they need and delivers all services with consistent availability, resiliency, security, and manageability.</p> <p>Salesforce provides market leading PaaS and SaaS solutions and is a multitenant cloud-based subscription service. Multi-tenant cloud solutions provide a single, shared infrastructure, one code base, one platform that is all centrally managed, with platform-based API to support all integration traffic, and multiple release upgrades included as part of the subscription service. Multi-tenancy and the Cloud Computing model remove unneeded tasks from the process of delivering, managing, and integrating software. Salesforce customers will not need to maintain any hardware or software. Without multiple versions to support, integrations don't break during updates; they are simply updated automatically. As a result, both the initial integration and its continued maintenance are simplified. More resources can be focused on creating a better product, with a faster cycle of innovation, instead of having to manage the complexity of many different versions to support a vast installed base.</p> <p>Salesforce's position as an online service enables us to roll out all levels of improvement, from patch releases to major upgrades, that are largely transparent to the end users. When a bug is fixed and tested, it is rolled out to the application as part of regular maintenance; the nature of the service prevents special patches and code branches for individual customers, so all fixes can potentially benefit all customers.</p> <p>The Salesforce Services is delivered using a world-class data center infrastructure. Each customer's org is hosted from a primary and secondary production data center, with near real-time replication occurring between the two sites.</p> <p>Salesforce is a pure multi-tenant web application. No software or infrastructure is required by the customer other than a computer, browser and internet connection or a mobile device. User Administration and Provisioning User provisioning and management is performed by the customer through the Salesforce Administrative Setup environment. Users, their profiles, permissions and passwords may be managed, edited, activated and deactivated as needed by those with appropriate permissions. An administrator with appropriate privileges can manage session timeout, password policies, IP range login restrictions, delegated authentication/SSO, and requirements as part of this process. On first time login or password reset request, users are required to change their passwords to gain access.</p> |                                                                                                                                                                               |
| ServiceNow | ServiceNow includes all documentation on the wiki at <a href="http://wiki.servicenow.com">wiki.servicenow.com</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                               |
| DocuSign   | DocuSign hosts customer accounts in its own data centers managed by DocuSign. Upon a new contract executed with a customer, DocuSign provisions a customer account based on the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                               |

| SAP    | Ariba                                                                                                                                                                                                                                                       | Our solutions are offered and delivered in a true subscription-based model and shared service (multi-tenant) offering. There is no software to install, no hardware to buy, no maintenance or support costs and no need to hire consultants or tech specialists to run the system. We deploy and manage the infrastructure. Customers only need a web browser for access. Subscriptions include system maintenance, automatic upgrades, enhancements and application of service packs, Level 1– 3 help desk support, professional services and best practices built directly into the application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|        | Fieldglass                                                                                                                                                                                                                                                  | Fieldglass maintains its own platforms and follows a mature change control process for introducing new systems to the hosted environments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|        | SuccessFactors                                                                                                                                                                                                                                              | We offer a cloud based solution. Our application is standardized on the J2EE technology stack with the majority of our software written in industry-standard software programming languages, such as Java.<br>We also make extensive use of Web 2.0 technologies, such as AJAX and Flash, for improved usability and performance and to deliver a rich and highly interactive experience. Our hardware consists primarily of industry standard web servers, application servers, database servers and storage and networking equipment.<br>Customers share the network security infrastructure, web servers, application servers and database instance, and each customer has their own set of database tables that are logically partitioned in the database containing its own unique database schema. Each company instance can be completely exported out of the database without affecting any other customer.<br>The application utilizes the JAVA and J2EE industry standards. Integration is supported through .CSV, XML and web services standards.<br>The application is portable to any platform and is deployed on Apache (Solaris) Web Servers, JBOSS Application Servers, and Veritas High Availability Cluster Servers, and utilizes Cisco Networking. |
| VMware | VMware IaaS Services<br>An interface that allows users to select from a catalog of pre built OS images and allows them to provision on the fly.                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Salesforce | <p>This is not applicable. These services while applicable to IaaS are not applicable to PaaS/SaaS where all of the infrastructure is managed by Salesforce as the Cloud Service Provider. These services are included and managed as part of the Salesforce subscription service and not directly exposed to the customer.</p> <p>The multitenant architecture and secure logical controls address separation of customer data. There are no dedicated servers used for individual customers. The Salesforce Services infrastructure is divided into a modular architecture based on "Instance". Each Instance is capable of supporting several thousand customers in a secure and efficient manner. Services are grouped within each Instance; with app, search, and database elements contained. There are appropriate controls in place to ensure that any given customer's org (application) is not compromised. The service has been designed to accomplish this and is robustly tested on an ongoing basis by both Salesforce and its customers.</p> <p>An instance consists of a database instance run on clustered database servers and physical storage subsystems. Each server has been allocated a different volume group so it can fail over to its backup server within the instance independently of the others. As scalability needs dictate,</p> |                                                                                                                                        |

|              | additional database instances can be brought online (the application already provides for this). For additional server capacity, one or more databases could be moved onto its own database server.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| ServiceNow   | ServiceNow has read and understands this requirement. ServiceNow supports only a SaaS environment so there is no on-premise offering.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SAP          | Ariba                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Operating systems when installed through default means and with default settings are typically not secure and often include applications and services not required. Ariba has standardized operating systems' installations based on best practices. Ariba servers are configured with just the applications and services required to run the server as designed. Services not required are disabled and binary files not required for operation are removed, which reduces the total number of vulnerabilities a system may have.<br>Ariba standardized installation process also ensures that all servers of the same type are configured exactly the same, utilizing a process that initiates an upgrade to system binaries across all systems. Based on the system type, the configuration will remain the same. If one server type needs to receive a patch for a vulnerable binary file, that patch is pushed to all systems of that particular server type. If that binary exists on all systems, it is patched across all systems. Patches are then included in the build process as well so that future systems built are in compliance with security standards. Ariba uses this configuration process to 'harden' the operating system prior to implementing additional controls as detailed below. |

Audit reports are available to customers and prospects upon completion of an NDA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| VMware       | <p>VMware IaaS Services</p> <p>vCloud Hybrid Service provides an interface that allows users to select from a catalog of pre-built OS images and allows them to provision on the fly.</p> <p>vRealize Automation is the next level for provisioning, delivering, and managing IT services on VMware vSphere infrastructure as well as VMware vCloud Air all with a unified management experience. It provides governance and blueprints to deliver services from on premise into vCloud Air.</p> <p>Customers can integrate vCloud Air with vRealize Automation. In this setup, users access vCloud Air primarily through the vRealize Automation service catalog which handles authentication to the service itself. vRealize Automation supports</p> <p>VMware AirWatch</p> <p>AirWatch uses industry recognized tools and follow best practices to deploy, configure, and maintain server images. We do not apply customer-supplied templates and do not share templates with customers.</p> <p>Due to FOIA restrictions, additional information regarding capacity planning and image creation/safeguarding cannot be disclosed at this time.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| FireEye      | This is not applicable as each of FireEye's offerings are classified as SaaS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| VirtueStream | VirtueStream offers on-demand self-service portal where State of Utah can deploy new servers as stand-alone or part of a server farm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## 2. Creating and storing server images for future multiple deployments

Internally we are well below capacity on our most congested interconnects. To the internet we use Border Gateway Protocol to peer with redundant Internet Service Provider's and manage the bandwidth accordingly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

Fieldglass monitors application servers, database servers, bandwidth, and infrastructure for average and maximum utilization with Orion. Current utilization averages approximately 20 percent across all components with a goal of scaling the component vertically or horizontally (depending on the specific component) upon reaching a 60 percent threshold). All systems are scalable either horizontally or vertically to handle capacity requirements. This includes but is not limited to web servers, database servers, and storage. |

| Salesforce | <p>Trust.salesforce.com is the Salesforce community's home for real-time information on system performance and security. On this site you'll find:</p> <ul style="list-style-type: none"> <li>• Live and historical data on system performance</li> <li>• Up-to-the minute information on planned maintenance</li> <li>• Phishing, malicious software, and social engineering threats</li> <li>• Best security practices for your organization</li> <li>• Information on how we safeguard your data</li> </ul> <p>System Overview</p> <p>In addition to our Trust site (<a href="http://trust.salesforce.com/trust/status">http://trust.salesforce.com/trust/status</a>), you will also have access to a System Overview, which will help Salesforce customers monitor performance and usage of their own Salesforce org. This overview includes:</p> <p>Schema - # and % of custom objects and data storage<br/> Business Logic - # and % of Rules, Apex triggers and classes, as well as % of code used<br/> Licenses<br/> API Usage - # and % of requests in the last 24 hours<br/> User Interface - # and % of custom apps, sites, flows, custom tabs and pages<br/> Portal</p> <p>The above list is of all the possible metrics that Salesforce customers may have in their system overview.</p>                             |                                                                                                                                                                                         |
| ServiceNow | ServiceNow has read and understands this requirement. ServiceNow supports only a SaaS environment so there is no on-premise offering.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                         |
| QTS        | <p>Alert Logic's Threat Manager Intrusion Detection System (IDS) and Vulnerability Scanning functionality are designed to monitor, detect, report and alert on adverse security issues on behalf of our customers. Within this process there are a number of both automated and manual processes which are supported by our SIEM software ('The Expert System') as well as our Network Security Analysts in our Security Operations Center (SOC). Threat Manager is the Alert Logic IDS and VA scan product. It includes the physical or virtual appliances and software tools used to analyze the customer's infrastructure and monitor that infrastructure for attacks. ActiveWatch is the managed aspect of Threat Manager, providing 24 x 7 monitoring and incident response operations from the Alert Logic SOC.</p> <p>Threat Manager's Expert System identifies valid security events and suppresses false positives through a patented multifactor correlation process. Every security event monitored by its global network of threat sensors is analyzed in real time. When the Expert System determines that a set of events comprise a valid security threat, an incident is created and escalated according to severity via email or through an Alert Logic Network Security Analyst. This approach dramatically</p> |                                                                                                                                                                                         |

|     | reduces false positives and keeps analysts and customers focused on real, actionable incidents. In addition, Alert Logic's security research team continuously monitors threat data and tunes the Expert System to respond to the most current threats. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SAP | Ariba                                                                                                                                                                                                                                                   | <p>Within our solution, specific logging takes place that is viewable by the customer administrator or their designee. Audit logs produced through use of the solution are considered customer data and are maintained within the customer's instance of the database. These logs are retained so long as the customer has an active contract with us.</p> <p>As a user control consideration, customers are responsible for monitoring the proper entry of data to the solution and reviewing reports generated by the system.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|     | Fieldglass                                                                                                                                                                                                                                              | <p>Fieldglass has a comprehensive set of performance monitoring tools in place. Some tools are built in the application and some are external.</p> <p>The Fieldglass application captures every page hit and the time it takes to respond. It captures the server response time and the client rendering time separately. The average page times are available to be seen by privileged users through the application. The user can drill down to the hour or minute or a single request for analysis. The information can be displayed by time range for all users, by company, or even for an individual user.</p> <p>Orion Network Monitoring watches more than 1,000 different points of interest on the production infrastructure. These monitors include, but are not limited to, the following: CPU, Memory, I/O, Capacity and Synthetic Transactions. These monitors along with our custom application performance monitors are used to produce and comply with customer SLA requirements.</p> <p>Fieldglass also uses Splunk Enterprise Security for event/audit log collection and correlation. Events and logs are retained online for 90 days and offline for two years.</p> <p>Alerts are generated and reviewed as they occur.</p> |

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | that point in time. The data in the audit log can be viewed with appropriate permissions.<br>We also provide an optional Audit Framework for additional audit logging capabilities. All audit logs within the application are accessible only by customers. Therefore, the review of application audit logs as well as retention periods for the application audit logs are the customer's responsibility, and can be determined as per requirements |
| VMware  | <p>VMware IaaS Services</p> <p>The vCloud Hybrid Service infrastructure, including the top layer management stack, the customer management stack and the computing/storage/network hardware are monitored for availability, capacity and performance. Customers are responsible for monitoring their own VMs (OS, apps). Customers can use on premise monitoring tools to manage and monitor their applications and OSes over VPN and direct connect.</p> <p>VMWare AirWatch</p> <p>The AirWatch Cloud Operations team monitors the SaaS environment. AirWatch follows the Fault, Configuration, Accounting, Performance, and Security (FCAPS) model to monitor the SaaS environment.</p> <ul style="list-style-type: none"> <li>•We have configured the system to notify support personnel of any issues with key performance items</li> <li>•Because the solution is built on industry-standard ASP.NET architecture, it integrates into existing management and monitoring tools. Administrators can configure log data storage to destinations such as Windows Event Viewer, SNMP traps, syslog, SMTP email alerts, etc. The solution also integrates directly with Microsoft SCCM.</li> </ul> <p>The communication layer includes a complete infrastructure for API integration to third parties as well as a rich set of existing APIs, web services, single sign on and authentication protocols.</p> <p>Integrate with security information and event management (SIEM) solutions for enhanced logging of events occurring in the console. Administrators can view events, filter by event type, category and module, and export events. Event logging settings can be configured based on severity levels, with the ability to send specific levels to external system via syslog integration.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| FireEye | This is not applicable as each of FireEye's offerings are classified as SaaS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

### 8.18 Trial and Testing Periods (Pre- and Post- Purchase)

#### 8.18.1 Describe your testing and training periods that your offer for your service offerings.

Training and testing periods will vary based on the Service provider as well as the complexity of the request that is made by the Purchasing Entity. Some of the services can be functional within a few days and some will take a few months for full implementation.

#### 8.18.2 Describe how you intend to provide a test and/or proof of concept environment for evaluation that verifies your ability to meet mandatory requirements.

Upon Request, Carahsoft will provide access to any of the Cloud Technologies proposed. The precise Access to the technology may be in a limited or "DEMO" fashion. Access will be to an extent that the State may complete any necessary tests or verifications that may be required. Instructions on precisely how each technology will be accessed will be provided upon request. All of the proposed technologies are currently live/ active and support many customers. A specific instance of the requested technology would be stood up within the cloud framework to support this request. As this will be occurring within a production, the creation of the instance is a quick and straight forward process not requiring any sort of extraordinary effort.

**8.18.3 Offeror must describe what training and support it provides at no additional cost.**

Carahsoft provides the customer with free training for specific deals on a case by case basis. This can include free installation, training, and maintenance for high value customers who purchase Carahsoft's solution through the NASPO contract vehicle. In addition, Carahsoft will provide webinars with basic training on a quarterly basis, made available to any Purchasing Entity who wishes to participate.

**8.19 Integration and Customization****8.19.1 Describe how the Solutions you provide can be integrated to other complementary applications, and if you offer standard-based interface to enable additional integrations.**

The integration into other applications will vary base on the Service Provider, however it is standard practice to allow for open APIs for integration development. For example Connecting Salesforce to an existing enterprise application is a common and frequently performed task. Integration options range from native Web Services support (APIs, outbound workflow, etc.) to import/export utilities to middleware integration via packaged connectors to toolkits for Java, .NET, and other open platforms. Our solution provides the ability to call out to virtually all common APIs, to enable synchronization, push / pull, and mash-ups with external apps/systems. Salesforce itself is based on web-service based APIs that in turn simplify access to Salesforce data from external systems. API-based integration is heavily leveraged by our customers.

**8.19.2 Describe the ways to customize and personalize the Solutions you provide to meet the needs of specific Purchasing Entities.**

The Service Providers customization options are very extensive and highly configurable. For example The Salesforce Platform offers a core set of technologies that not only power the Salesforce SaaS products, but also allows your Agency to build custom apps, connect data from any system, and manage it from anywhere. The Salesforce Platform allows customers to build apps fast with just a few clicks, designed for desktop and mobile devices, all from a single canvas. The Salesforce Platform has been given top ratings by Gartner, Forrester, & Info-Tech Research. To help IT deliver apps faster, the Salesforce Platform offers a simple yet powerful set of declarative, point-and-click tools that anyone can use to achieve business goals at lightning speed. Without writing code, developers and business users alike can quickly and easily create custom apps on the Salesforce Platform with complex business logic and beautiful user interfaces designed specific to every screen. Salesforce Lightning Builder tools allows your Agency to work in alignment with agile development methodologies as IT meet business demands faster. The Platform uses open APIs based on industry standards such as REST and SOAP to make it easy for your Agency to build apps that integrate with legacy systems. For more complex applications, developers can leverage the Apex programming language. Apex is an object-oriented, on-demand language. It is like Java, with similar syntax and notation, and is strongly-typed, compiled on demand, and fully integrated into the Platform. All of the application services come right out of the box, from a powerful workflow engine to API services, integration services, authentication, event log framework, analytics, and collaboration.

**8.20 Marketing Plan****Describe your how you intend to market your Solutions to NASPO ValuePoint and Participating Entities.**

Carahsoft offers deep experience in public sector marketing. Our dedicated team plans, promotes and executes more than 2,000 public-sector marketing campaigns and events each year, including contract-specific promotional activities. These include but are not limited to:

- News announcements

- Social media promotion (Twitter, Linked In, Facebook, Carahsoft Community)
- Website content/reciprocal links (Carahsoft website page; content for contract sponsor page)
- Marketing materials (FAQs, contract overviews, solution spec sheets, powerpoint slides)
- Training documents
- Co-branded tradeshow graphics, giveaways, display materials
- Tradeshow participation (national, state and local government and education shows)
- Digital and print ads
- Webinars
- Email campaigns
- Proactive marketing opportunity available through:
  - National Coalition for Public Procurement (NCP) – [publicprocurementcoalition.org](http://publicprocurementcoalition.org)
  - Institute for Public Procurement (NIGP) – [nigp.org](http://nigp.org)
  - National Association of Counties (NACo) – [naco.org](http://naco.org)
  - The United States Conference of Mayors – [usmayors.org](http://usmayors.org)
  - National League of Cities – [nlc.org](http://nlc.org)
  - National Governors Association – [nga.org](http://nga.org)
  - Relevant State Associations

### **8.21 Related Value-Added Services to Cloud Solutions**

Describe the valued-added services that you can provide as part of an awarded contract, e.g. consulting services pre- and post- implementation. Offerors may detail professional services in the RFP limited to assisting offering activities with initial setup, training and access to the services.

In addition to Carahsoft's quoting and configuration expertise, we also have a wide range of Service Provider implementation partners that we leverage to work with Purchasing Entities in order to ensure successful adoption and deployment within a Purchasing Entity. We will help to identify needs for initial setup, training and access to the services so that it is all available at the best prices from one source to the Purchasing Entity.

### **8.22 Supporting Infrastructure**

8.22.1 Describe what infrastructure is required by the Purchasing Entity to support your Solutions or deployment models.

The Service Providers that are being proposed operate on their own secure infrastructure. The Purchasing Entities will only need an internet connection to access the services.

8.22.2 If required, who will be responsible for installation of new infrastructure and who will incur those costs?

The Service Providers maintain all costs for updating and building new infrastructures.

### **8.23 Alignment of Cloud Computing Reference Architecture**

Clarify how your architecture compares to the NIST Cloud Computing Reference Architecture, in particular, to describe how they align with the three domains e.g. Infrastructure as a Service (IaaS), Software as a Service (SaaS), and Platform as a Service (PaaS).

|    |          |                                               |
|----|----------|-----------------------------------------------|
| CA | APM      | The SaaS portal runs in Amazon Web Services.  |
|    | MAA      | CA MAA is a SaaS service.                     |
|    | CA Agile | Only SaaS is being offered via a public cloud |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                        |

| Virtu      | The capability provided to the consumer is to use the provider's applications running on a cloud infrastructure <sup>2</sup> . The applications are accessible from various client devices through either a thin client interface, such as a web browser (e.g., web-based email), or a program interface. The consumer does not manage or control the underlying cloud infrastructure including network, servers, operating systems, storage, or even individual application capabilities, with the possible exception of limited userspecific application configuration settings.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                        |
| Salesforce | <p>Salesforce's deployment model is a "public" cloud infrastructure, as defined by NIST 800-145. In the Salesforce Government Cloud, an agency dynamically provisions computing resources over the Internet on our multi-tenant infrastructure. This is a cost effective deployment model for agencies as it gives them the flexibility to procure only the computing resources they need and delivers all services with consistent availability, resiliency, security, and manageability.</p> <p>Salesforce was the first Cloud Service Provider to attain FedRAMP Authority to Operate for both Software as a Service (SaaS) and Platform as a Service (PaaS), consistent with the FedRAMP moderate baseline controls. Salesforce does not provide IaaS as a direct service offering to our customers, it is an underlying part of our PaaS and SaaS offerings.</p> <p><b>Salesforce Government Cloud</b><br/> In May 23, 2014 Salesforce achieved a FedRAMP Agency Authority to Operate at the moderate impact level (as described in FIPS 199 and 200) issued by Health and Human Services (HHS) for the Salesforce Government Cloud. Additionally, on May 15, 2015, HHS, as the FedRAMP authorizing agency, approved the Salesforce Government Cloud authorization package that was updated based on annual attestation requirements and updates to the FedRAMP baseline which is FISMA compliant and based on the current release of NIST SP 800-53 Rev. 4.</p> <p>Testing for the ATO was performed by a third party assessment organization (3PAO). The Salesforce Government Cloud information system and authorization boundary, is comprised of the Force.com Platform, Salesforce Services (Sales Cloud, Service Cloud, Chatter), and the backend infrastructure (servers, network devices, databases, storage arrays) that support the operations of these products, referred to as the General Support System (GSS).</p> <p>To obtain compliance with FedRAMP, Salesforce conducted security assessment and authorization activities in accordance with FedRAMP guidance, NIST SP 800-37, and HHS guidance. As part of this process Salesforce documented a System Security Plan (SSP) for the Salesforce Government Cloud service offering. The SSP is developed in accordance with NIST SP 800-18, Guide for Developing Federal Information System Security Plans. The SSP identifies control implementations for the GSS and in-scope customer facing products (Force.com Platform, Salesforce Services) according to the FedRAMP moderate baseline and HHS security control parameters. A security assessment of the information system was conducted by a third party assessment organization (3PAO) in accordance with NIST 800-53A and FedRAMP requirements. The security assessment testing determined the adequacy of the management, operational, and technical security controls used to protect the confidentiality, integrity, and availability of the Salesforce service and the customer data it stores, transmits and processes.</p> <p>To maintain compliance with FedRAMP, Salesforce conducts continuous monitoring. Continuous monitoring includes ongoing technical vulnerability detection and remediation, remediation of open compliance related findings, and at least annual independent assessment of a selection of security controls by 3PAO. As part of our FedRAMP annual assessment, Salesforce is now aligned with NIST SP 800-53, Rev. 4 controls.</p> |                                                        |
